** All traffic control devices and/or pavement markings will be placed if and where approved by the Engineer. All items necessary for traffic control is subsidiary to the item of "Maintenance of Traffic".

GENERAL NOTES

1 TOTAL ALLOWABLE WORKING DAYS: 160 days

2 PAINT SYSTEM: SEE SECTION 807 AND 820 OF THE STANDARD SPECIFICATIONS AND SPECIAL PROVISIONS.
PRIME COAT: ONE COAT OF INORGANIC ZINC, 3 MIL DFT MINIMUM UNLESS NOTED.
INTERMEDIATE EPOXY TIE COAT: 2 MIL DFT MINIMUM
FINISH COAT: ONE COAT URETHANE, 3 MIL DFT MINIMUM, GRAY - FEDERAL STANDARD 595B COLOR CHIP 36270
EXCEPT THAT BRIDGE 02597 SHALL BE GREEN - COLOR CHIP 14109.
MAXIMUM DFT FOR EACH COAT AS RECOMMENDED BY COATING MANUFACTURER.

3 ALL SURFACES TO BE PAINTED SHALL BE CLEAN AND FREE OF DUST OR OTHER OBJECTIONABLE MATTER.

4 CONTRACTOR IS RESPONSIBLE FOR BEING FAMILIAR WITH THE LOCATION OF ALL UTILITIES ON THE BRIDGES BEFORE BIDDING.

5 UTILITIES ON BRIDGES SHOULD BE PROTECTED DURING THE CLEANING AND PAINTING OPERATION.

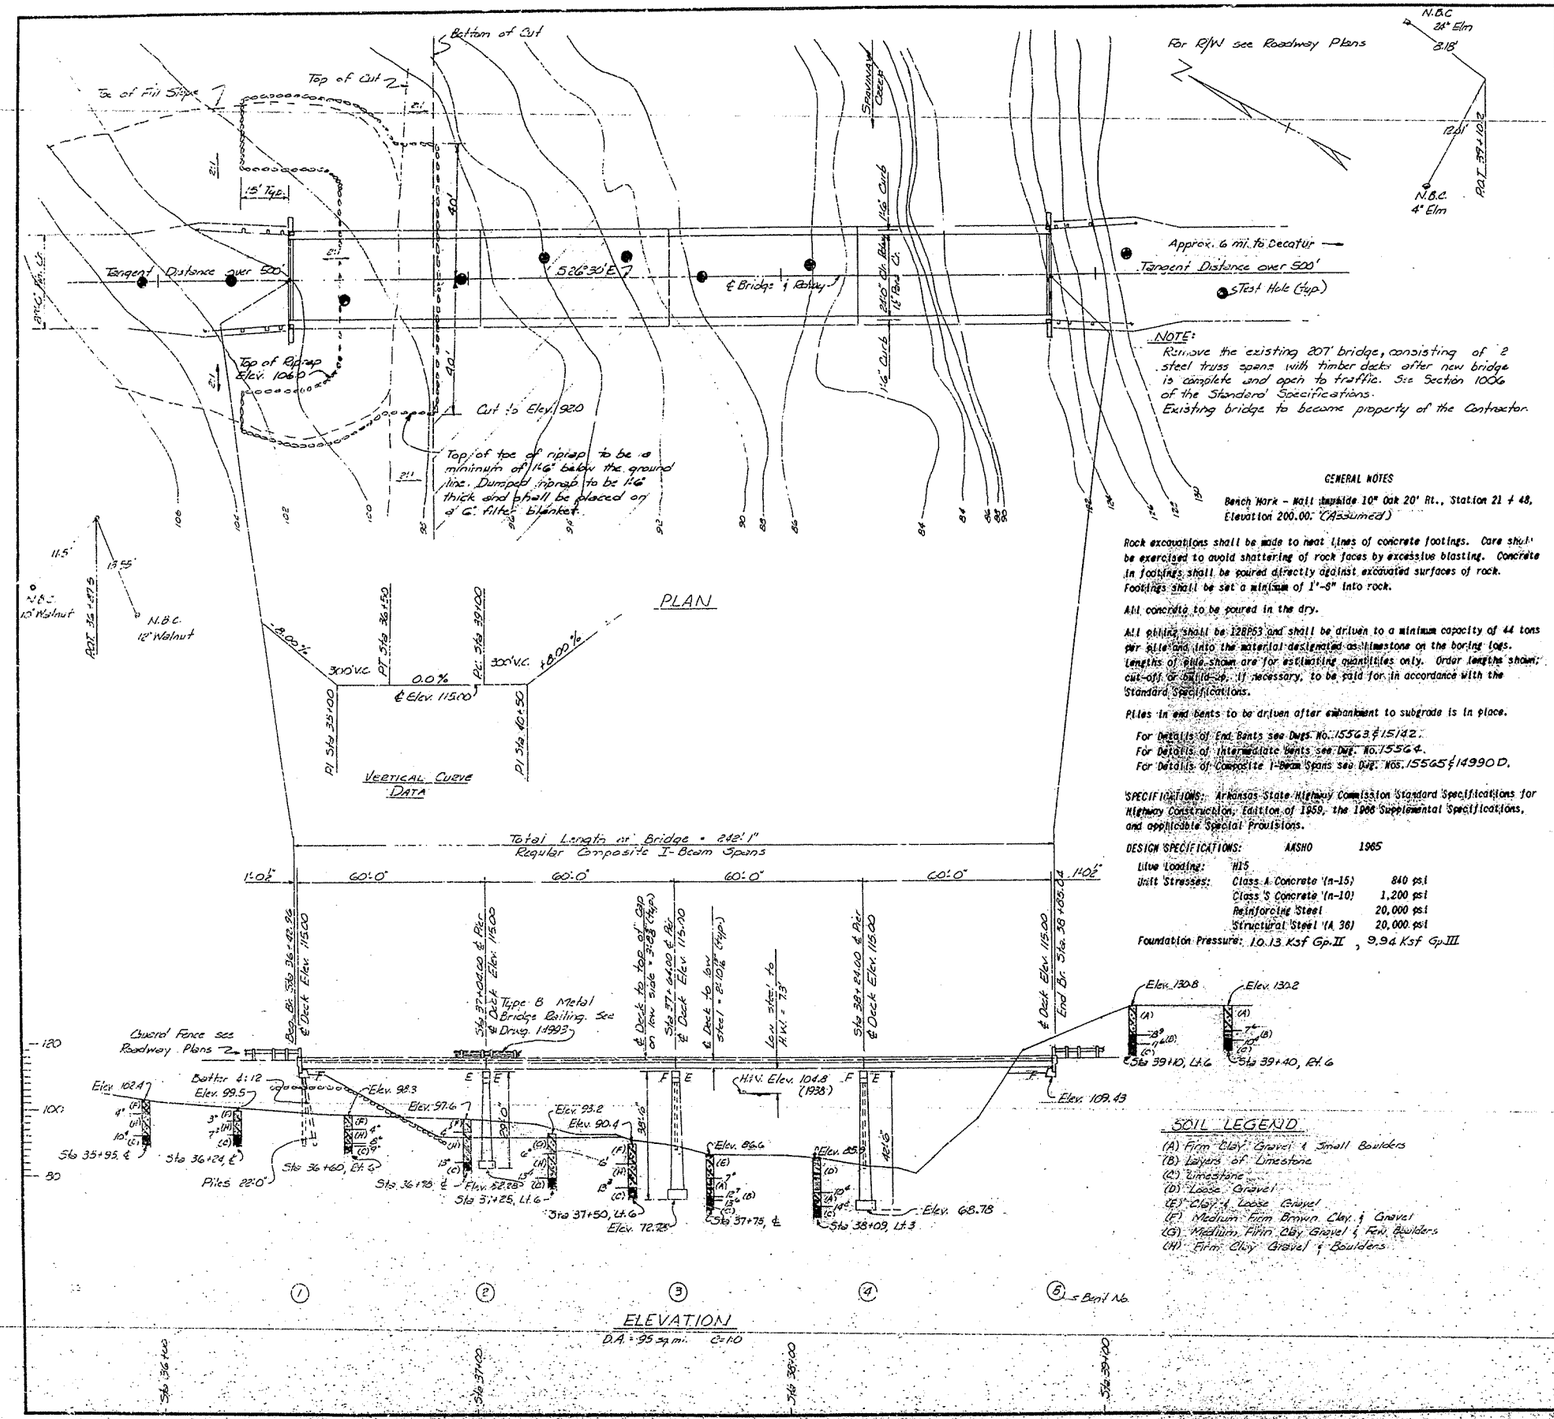
(1) Layout of Bridge No. 04231



NOTE:
Remove the existing 207' bridge, consisting of 2 steel truss spans with timber decks after new bridge is complete and open to traffic. See Section 1006 of the Standard Specifications. Existing bridge to become property of the Contractor.

GENERAL NOTES

Bench Mark - Nail in spikside 10" Oak 20' Rt., Station 21 + 48, Elevation 200.00' (Assumed)

Rock excavations shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock. Footings shall be set a minimum of 1'-6" into rock.

All concrete to be poured in the dry.

All piling shall be 12BP53 and shall be driven to a minimum capacity of 44 tons per sq. in. and into the material designated as limestone on the boring logs. Lengths of pile shown are for estimating quantities only. Order length as shown; cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in end bents to be driven after embankment to subgrade is in place.

For Details of End Bents see Dwgs. No. 15563 & 15142.
For Details of Intermediate Bents see Dwg. No. 15564.
For Details of Composite I-Beam Spans see Dwg. Nos. 15565 & 14990D.

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 1959, the 1966 Supplemental Specifications, and applicable Special Provisions.

GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered 3/4" unless otherwise noted.

Field connections to be riveted or ... with high strength bolts.

Rivets: 3/4" ϕ, open holes 13/16" ϕ except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat-red lead tinted with lamp black. Second coat-aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in accordance with Sec. 806.54, including alternate, of the Standard Specifications. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All steel shall be ASTM A-36 unless otherwise noted.

Anchor bolts shall be galvanized to conform to ASTM Specification, Designation A153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire, supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured, not less than 72 hours shall elapse before pouring the end sections. End sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours. A minimum of 72 hours shall elapse (1) between completion of the slab and the pouring of the curb section if poured separately, and (2) between the completion of the curb and the pouring of the type A rail parapet. Posts for Type B or C rail may be poured 24 hours after completion of the curb.

For details of Bridge Railing see Dwg. No. 14992 or 14993 as shown on bridge layout.

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction Edition of 1959, the 1966 Supplemental Specifications thereto and applicable Special Provisions.

EXPANSION JOINT DATA

Total Length of Spans Expanding at Bent or Pier (F-E 1 Span, E-E 2 Spans)	"A" (Joint Width Perpendicular to ℄ webs @ 60°F)	Seal Width	B
To 80'	1"	1 3/4"	1 3/4"±
Over 80' to 100'	1 1/4"	2"	1 7/8"±
Over 100' to 140'	1 1/2"	2 1/2"	2"±
Over 140' to 180'	2"	3"	2 1/4"±

Note: All joints at Abutments and at Fix-Fix joints shall be 1".
The Dimension "D" shall conform to the recommendations of the seal manufacturer as approved by the Bridge Engineer. The depth of the seal shall be approximately equal to the uncompressed width of the seal.

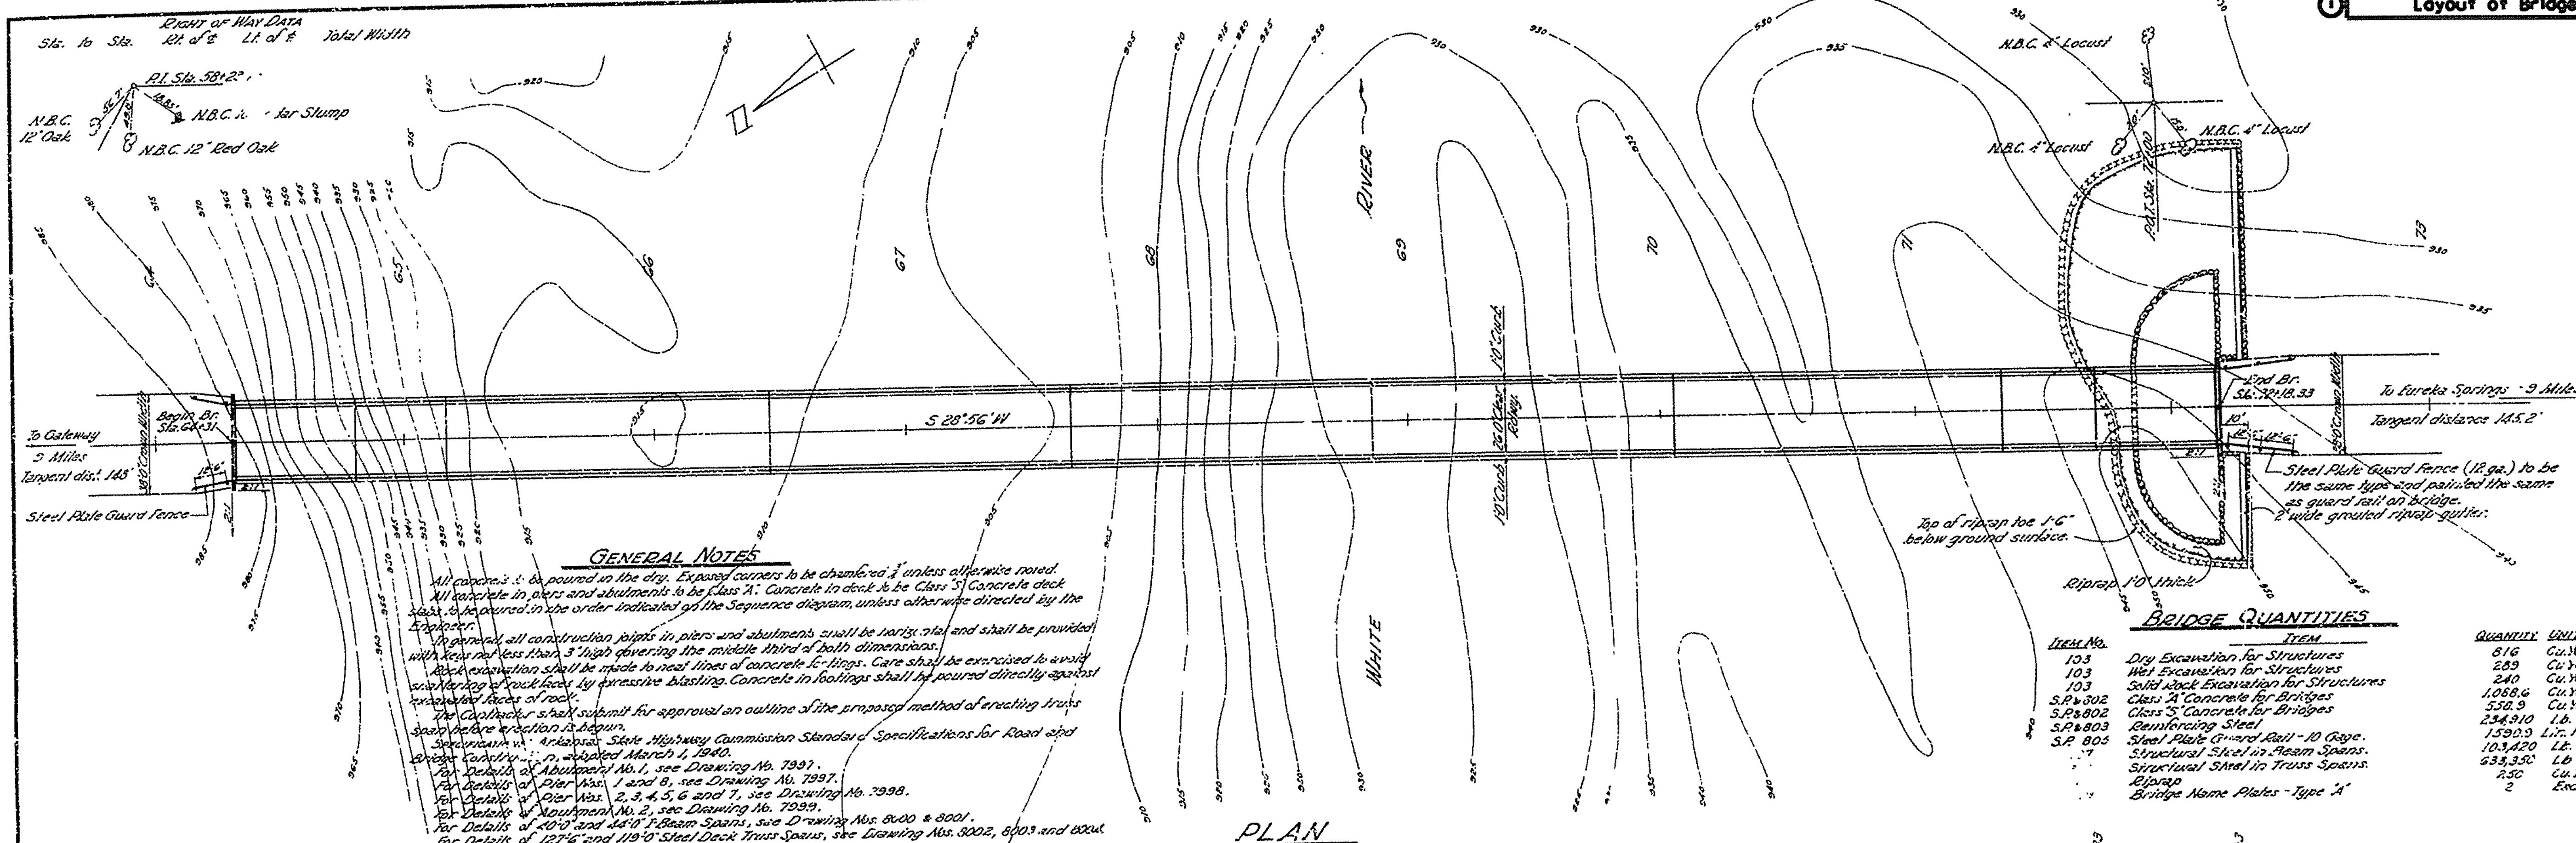
CHECKED BY: DFL DATE: 1-5-67
SCALE: As Shown

L. R. Carlson
BRIDGE ENGINEER

BRIDGE NO. 4231 DRAWING NO. 14990D



General Notes

All concrete to be poured in the dry. Exposed corners to be chamfered ¾" unless otherwise noted.

All concrete in piers and abutments to be Class "A". Concrete in deck to be Class "S". Concrete deck slabs to be poured in the order indicated on the Sequence diagram, unless otherwise directed by the Engineer.

In general, all construction joints in piers and abutments shall be horizontal and shall be provided with keys not less than 3" high covering the middle third of both dimensions.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated faces of rock.

The Contractor shall submit for approval an outline of the proposed method of erecting truss span before erection is begun.

Specifications: Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1940.

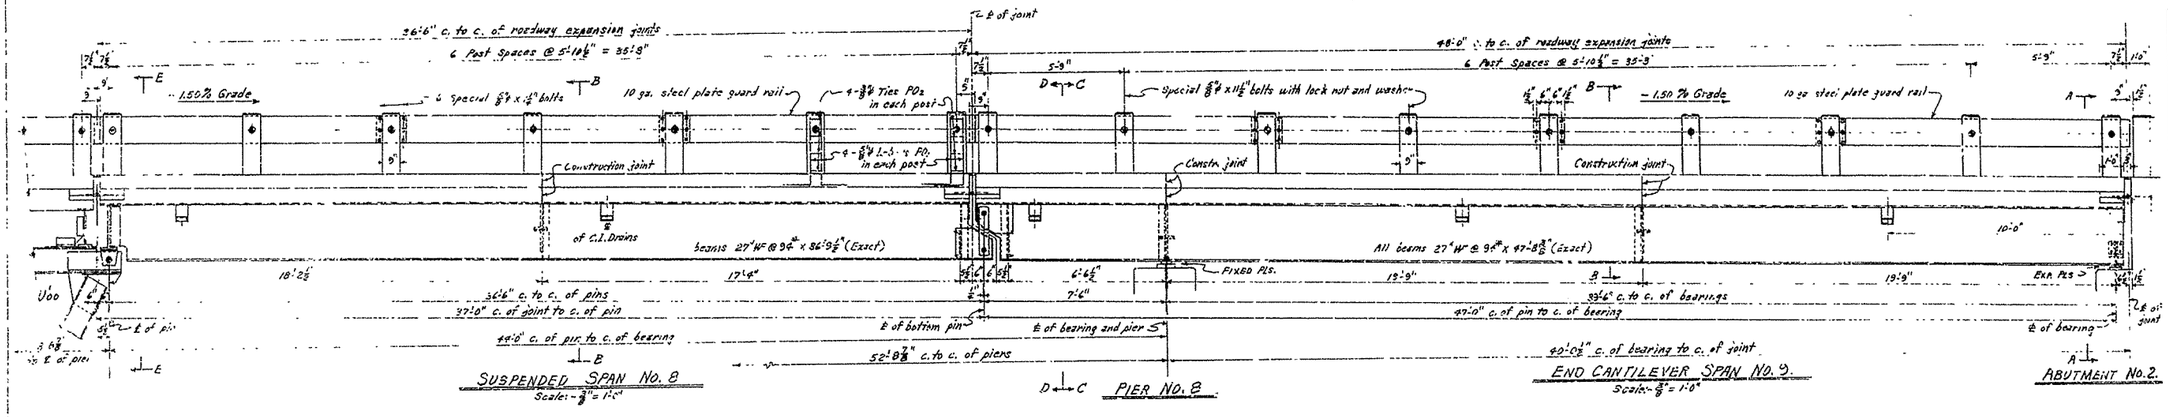
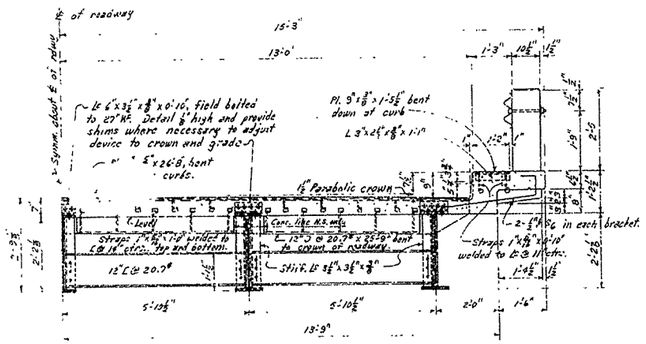
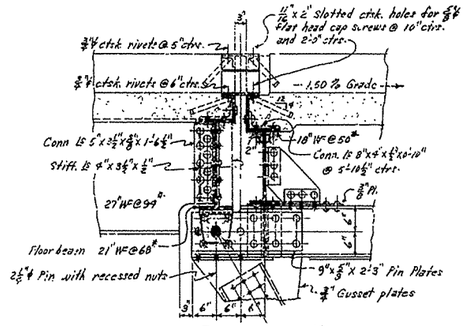
① I-Bm. Span Details of Br. No. 02597

NOTE:- All horizontal lines of handrail to be parallel to the finished grade. All vertical lines shall be plumb in their final position.

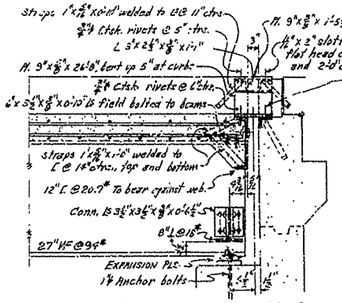


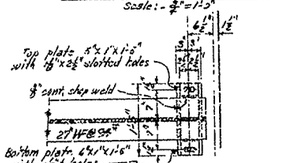




NOTE:- Details at U00 are similar except that the grade is reversed, thus requiring that the roadway expansion device be fixed on the truss side of the joint.

STEEL PLATE GUARD RAIL NOTE:- The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for "Steel Plate Guard Rail", to be painted same as structural steel.





GENERAL NOTES

All concrete to be Class "S". All exposed corners to be chamfered ¾" unless otherwise noted.

Rivets ¾" ℄. Open holes ⅞". Use machine bolts where both are indicated.

Ends of all stiffener angles shall be ground to bear against beam flanges.

Structural shapes of equal or greater strength may be substituted for shapes shown but payment will be made on shapes shown or actually used whichever is the lesser.

All weld connections to be ⅜" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.

All bearing plates are to be structural steel. All top plates to be shop welded to 29" mat. with ⅜" fillet welds extending entire length of all edges and surfaces in contact. Masonry plates to be seated on 3 layers of burlap saturated with red lead.

All bearing and roadway expansion devices to be paid for at the unit price bid for "Structural Steel in Beam Spans".

Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.

Field Paint:- 1st coat, units load stated with lamp black. 2nd coat, aluminum paint.

Cast iron drains to be paid for as "Reinforcing Steel" and are to be painted same as structural steel.

Reinforcing steel to be determined bars of intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel". Shop lists and diagrams must be submitted for approval.

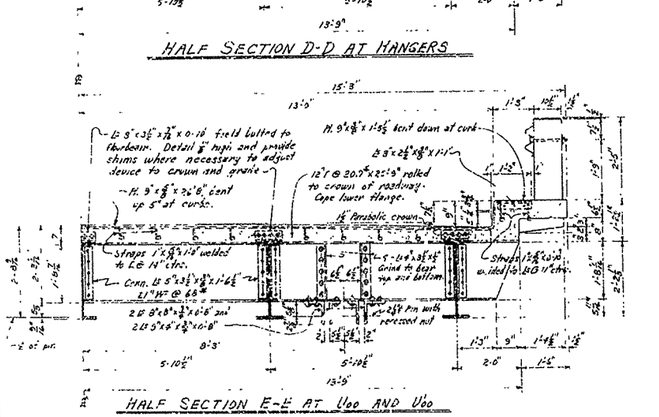
No tolerance will be permitted in the angle between flange and web of beams at points of bearing.

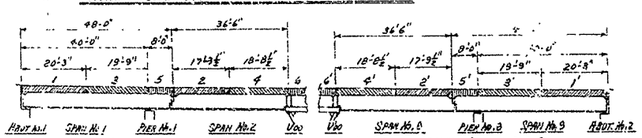
CAMBER:- To provide for dead load deflection of the steel beams the slab is to be approximately ¾" thicker at mid-span and ½" thicker at the quarter points. For cambering the span length shall be the distance center to center of piers.

Slab pours are to be made as scheduled by number in pouring schedule at left.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the specifications submitted and approval secured before fabrication is begun.

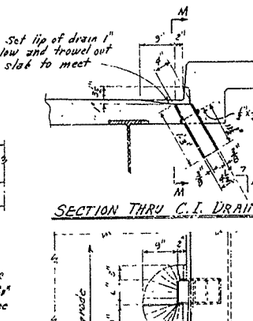
SPECIFICATIONS:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction adopted March 1, 1940.





SLAB POURING SCHEDULE FOR I-BEAM SPANS No. 1, 2, 8, & 9

Slab pours are to be made as scheduled by number as shown on schedule above.



NOTE:- Place drains on each side of roadway @ 17'-9" ctrs., beginning 10'-8" from ℄ of joint at abutments. See Elevation of each span.

Cast iron drains are to be paid for as "Reinforcing Steel" and are to be painted same as structural steel. Weight of each drain = 29 Lbs.

DESIGN STRESSES

NOTE:- In each member above the dead is given first, the live load second, the impact third, and the total stress last. All stress are given in thousands of pounds.
Plus (+) = Tension ; Minus (-) = Compression.
For all verticals not shown otherwise:-

Dead Load	= - 18.00
Live Load	= - 28.89
Impact	= - 8.67
	- 55.56

FLOOR BEAM DATA

	POSITIVE	NEGATIVE
Dead Load Moment	52,260	311,200
Live Load Moment	939,660	603,760
30% Impact	296,960	131,130
Totals =	1,333,700#	856,090#
Section Modulus required =	74.4	46.6
Use 18" WF @ 50#	S = 89.0	

NOTE:- For remainder of details see Sheet Nos. 2 & 3, Drawing Nos. 9003 and 9039.

GENERAL NOTES

Concrete Deck:- All concrete in roadway slab, sidewalk slab, and rail posts and brackets to be class "S". All exposed corners to be chamfered ¾" unless otherwise noted.
Rivets - In truss, floorbeams, cross frames, and lateral bracing use ¾" ø. Use machine bolts where bolts are indicated, unless otherwise noted.
Holes:- All holes, unless otherwise noted, shall be punched to a ¾" less diameter than nominal size of rivets, and reamed to a diameter ⅛" larger than nominal size of rivet.
Camber:- Trusses shall be cambered to compensate for deflection due to dead load.
Shop Paint:- All parts which come in contact shall be painted one coat of red lead and raw linseed oil before they are riveted together. When assembled and after all shop work has been completed, all steel shall be given one coat of red lead and raw linseed oil before shipment.
Field Paint:- 1st coat, white lead tinted with lamp black, 2nd coat, aluminum paint.
Shapes with equal or greater strength may be substituted for those shown. Payment, however will be based upon the shapes shown or actually used, whichever is the lesser.
All welded connections to bear ⅝" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.
This drawing shows general features of design only. Shop drawings shall be made in accordance with specifications, submitted and approval secured before fabrication is begun.
Specifications:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction adopted March 1, 1960.

SECTION H-H SHOWING DECK EXPANSION OVER PIERS No. 3, 4, 5 AND 6

Scale:- ½"=1'-0"

NOTE:- For expansion device at U0G and U8G, see Drawing No. 8001.

GENERAL NOTES

All concrete to be Class 'S'. All exposed corners to be chamfered ¾" unless otherwise noted. Reinforcing steel to be deformed bars of intermediate grade. Shop list and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports sufficient in number and size to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and diagrams of type to be used must be submitted for approval.

All weld connections to be ⅜" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.

The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for "Steel Plate Guard Rail". To be painted same as structural steel.

Rivets: ⅞". Open holes: 1⅛". Where bolts are indicated use machine bolts.

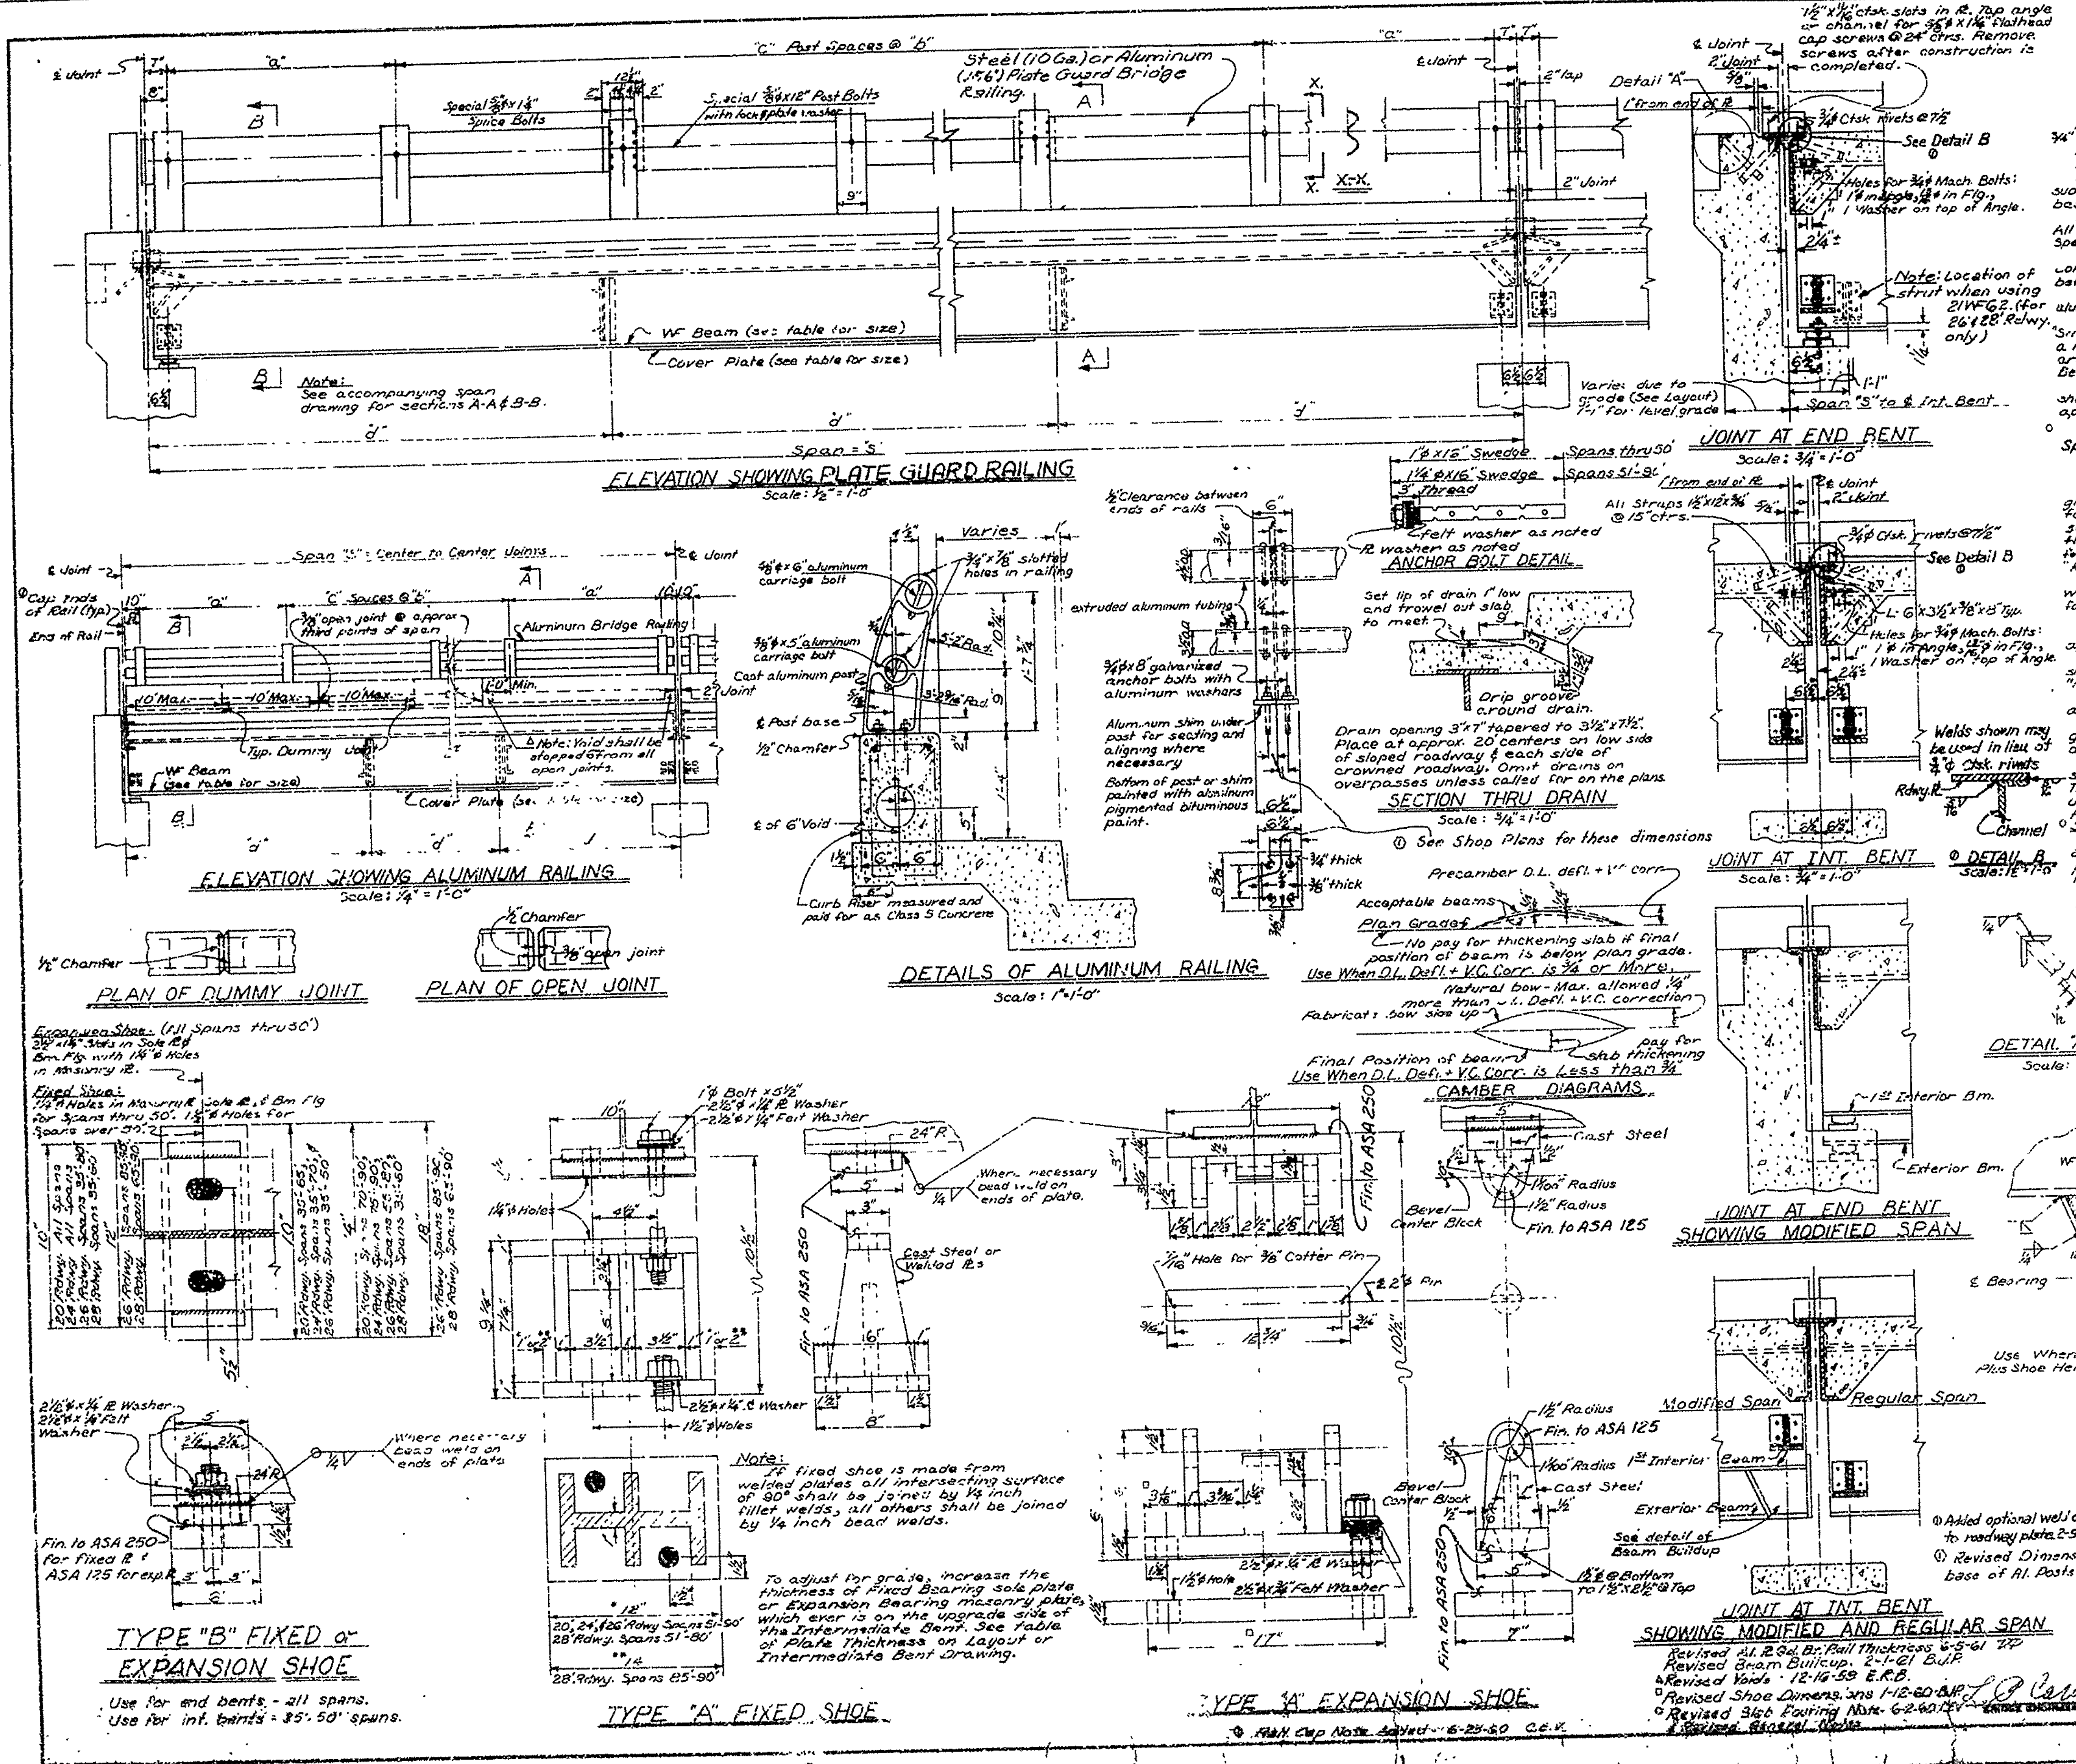
① I-Bm. Span Details of Br. No. 03345



GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered ¾" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts. Rivets ¾"φ, Open holes 13/16"φ except where noted otherwise.

Struc[tural] shapes of equal or greater strength may be substitut[ed fo]r shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, 5th Edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat - red lead tinted with lamp black. Second coat aluminum paint.

All bearing plates and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in a manner set forth in the Specifications. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

○ Anchor bolts shall be galvanized to conform to ASTM Specification, Designation A 153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

All chamfers on concrete riser for rail are to be ½".

Shop drawings showing details of railing shall be submitted and approval secured before fabrication is begun.

The aluminum bridge railing, including posts and fasteners, shall be paid for at the unit price bid per linear foot for "Aluminum Bridge Railing."

A rail connection utilizing set screws is an acceptable alternate and may be supplied at the Contractor's option.

Outside surfaces of flanges of cast aluminum posts shall be given a No. 220 grit belt finish after which all exposed surfaces of posts shall receive one coat of clear lacquer.

If Steel or Aluminum Plate Guard Bridge Railing is used it shall be the type shown or an equivalent rigid type as approved by the Engineer. The rail including posts and fastenings shall be paid for at the unit price bid per linear foot for "Steel or Aluminum Plate Guard Bridge Railing."

○ Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured not less than 72 hours shall elapse before pouring the end sections. The end sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours.

GENERAL NOTES

BENCH MARK: N.I.S. 8" CEDAR, 2' LT. CENTERLINE CONST., STA. 118+02, ELEV. 953.73

ALL CONCRETE SHALL BE POURED IN THE DRY. ALL EXPOSED CORNERS TO BE CHAMFERED 3/4" UNLESS OTHERWISE NOTED.

PILING IN END BENTS SHALL BE DRIVEN AFTER EMBANKMENT TO BOTTOM OF CAP IS IN PLACE. THE PILING SHALL BE HP10X42 AND SHALL BE DRIVEN WITH AN APPROVED AIR, STEAM, OR DIESEL HAMMER TO A MINIMUM BEARING CAPACITY OF 55 TONS PER PILE AND INTO MATERIAL DESIGNATED AS HARD GRAY DOLOMITE ON THE BORING LOGS. LENGTHS OF PILING SHOWN ARE FOR ESTIMATING QUANTITIES ONLY. ORDER LENGTHS SHOWN; CUT-OFF OR BUILD-UP, IF NECESSARY, TO BE PAID FOR IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS.

FOOTINGS FOR BENTS 2 & 3 SHALL BE SET A MINIMUM OF 1'-6" INTO MATERIAL DESIGNATED AS HARD GRAY DOLOMITE ON THE BORING LOGS. FOUNDATIONS FOR FOOTINGS SHALL BE PREPARED IN ACCORDANCE WITH SUBSECTION 801.04 OF THE STANDARD SPECIFICATIONS.

SPECIFICATIONS: ARKANSAS STATE HIGHWAY COMMISSION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, EDITION OF 1978 AND APPLICABLE SPECIAL PROVISIONS.

DESIGN SPECIFICATIONS: AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 1977 EDITION WITH CURRENT INTERIMS.

LIVE LOADING: H20

METHOD OF DESIGN: LOAD FACTOR

AFTER TRAFFIC IS ALLOWED ON THE NEW BRIDGE, EXISTING BRIDGE NO. M2025 SHALL BE REMOVED AND SHALL BECOME THE PROPERTY OF THE CONTRACTOR. THE EXISTING BRIDGE CONSISTS OF AN OAK DECK SUPPORTED BY I-BEAM STRINGERS AND CONCRETE PIER AND ABUTMENTS. BRIDGE LENGTH IS 49 FEET. SEE SECTION 205 OF THE STANDARD SPECIFICATIONS.

NOTE: IN ORDER TO COMPLY WITH THE NATIONWIDE PERMIT UNDER SECTION 404 OF THE FEDERAL WATER POLLUTION CONTROL ACT AMENDMENTS OF 1972, THE CONTRACTOR SHALL LIMIT THE AMOUNT OF FILL AND/OR DREDGED MATERIAL PLACED IN THE STREAM BELOW THE PLANE OF THE ORDINARY HIGH WATER MARK TO LESS THAN 200 CUBIC YARDS.

ELEVATION OF ORDINARY HIGH WATER IS ASSUMED TO BE 951.0.

GENERAL NOTES

T.B.M. - Spike . . . is of 30" Elm 3' Rt. Centerline Station 352 + 53. Elevation 1227 . .

All concrete to be poured in the dry.

Rock excavations shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock., Footings shall be set a minimum of 2' into rock.

All piling shall be 12" BP 53# and shall be driven with an approved air, steam or diesel hammer to a minimum capacity of 38 tons per pile and into the material designated as rock on the boring logs. Lengths of piling shown are for estimating quantities only. Order lengths shown; cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in End Bents shall be driven after embankment is in place.

For Details of End Bents see Dwg. No. 15142
For Details of Piers see Dwg. No. 13600
For Details of Composite I-Beam Spans see Dwg. Nos. 14990C, 14993, and 13601

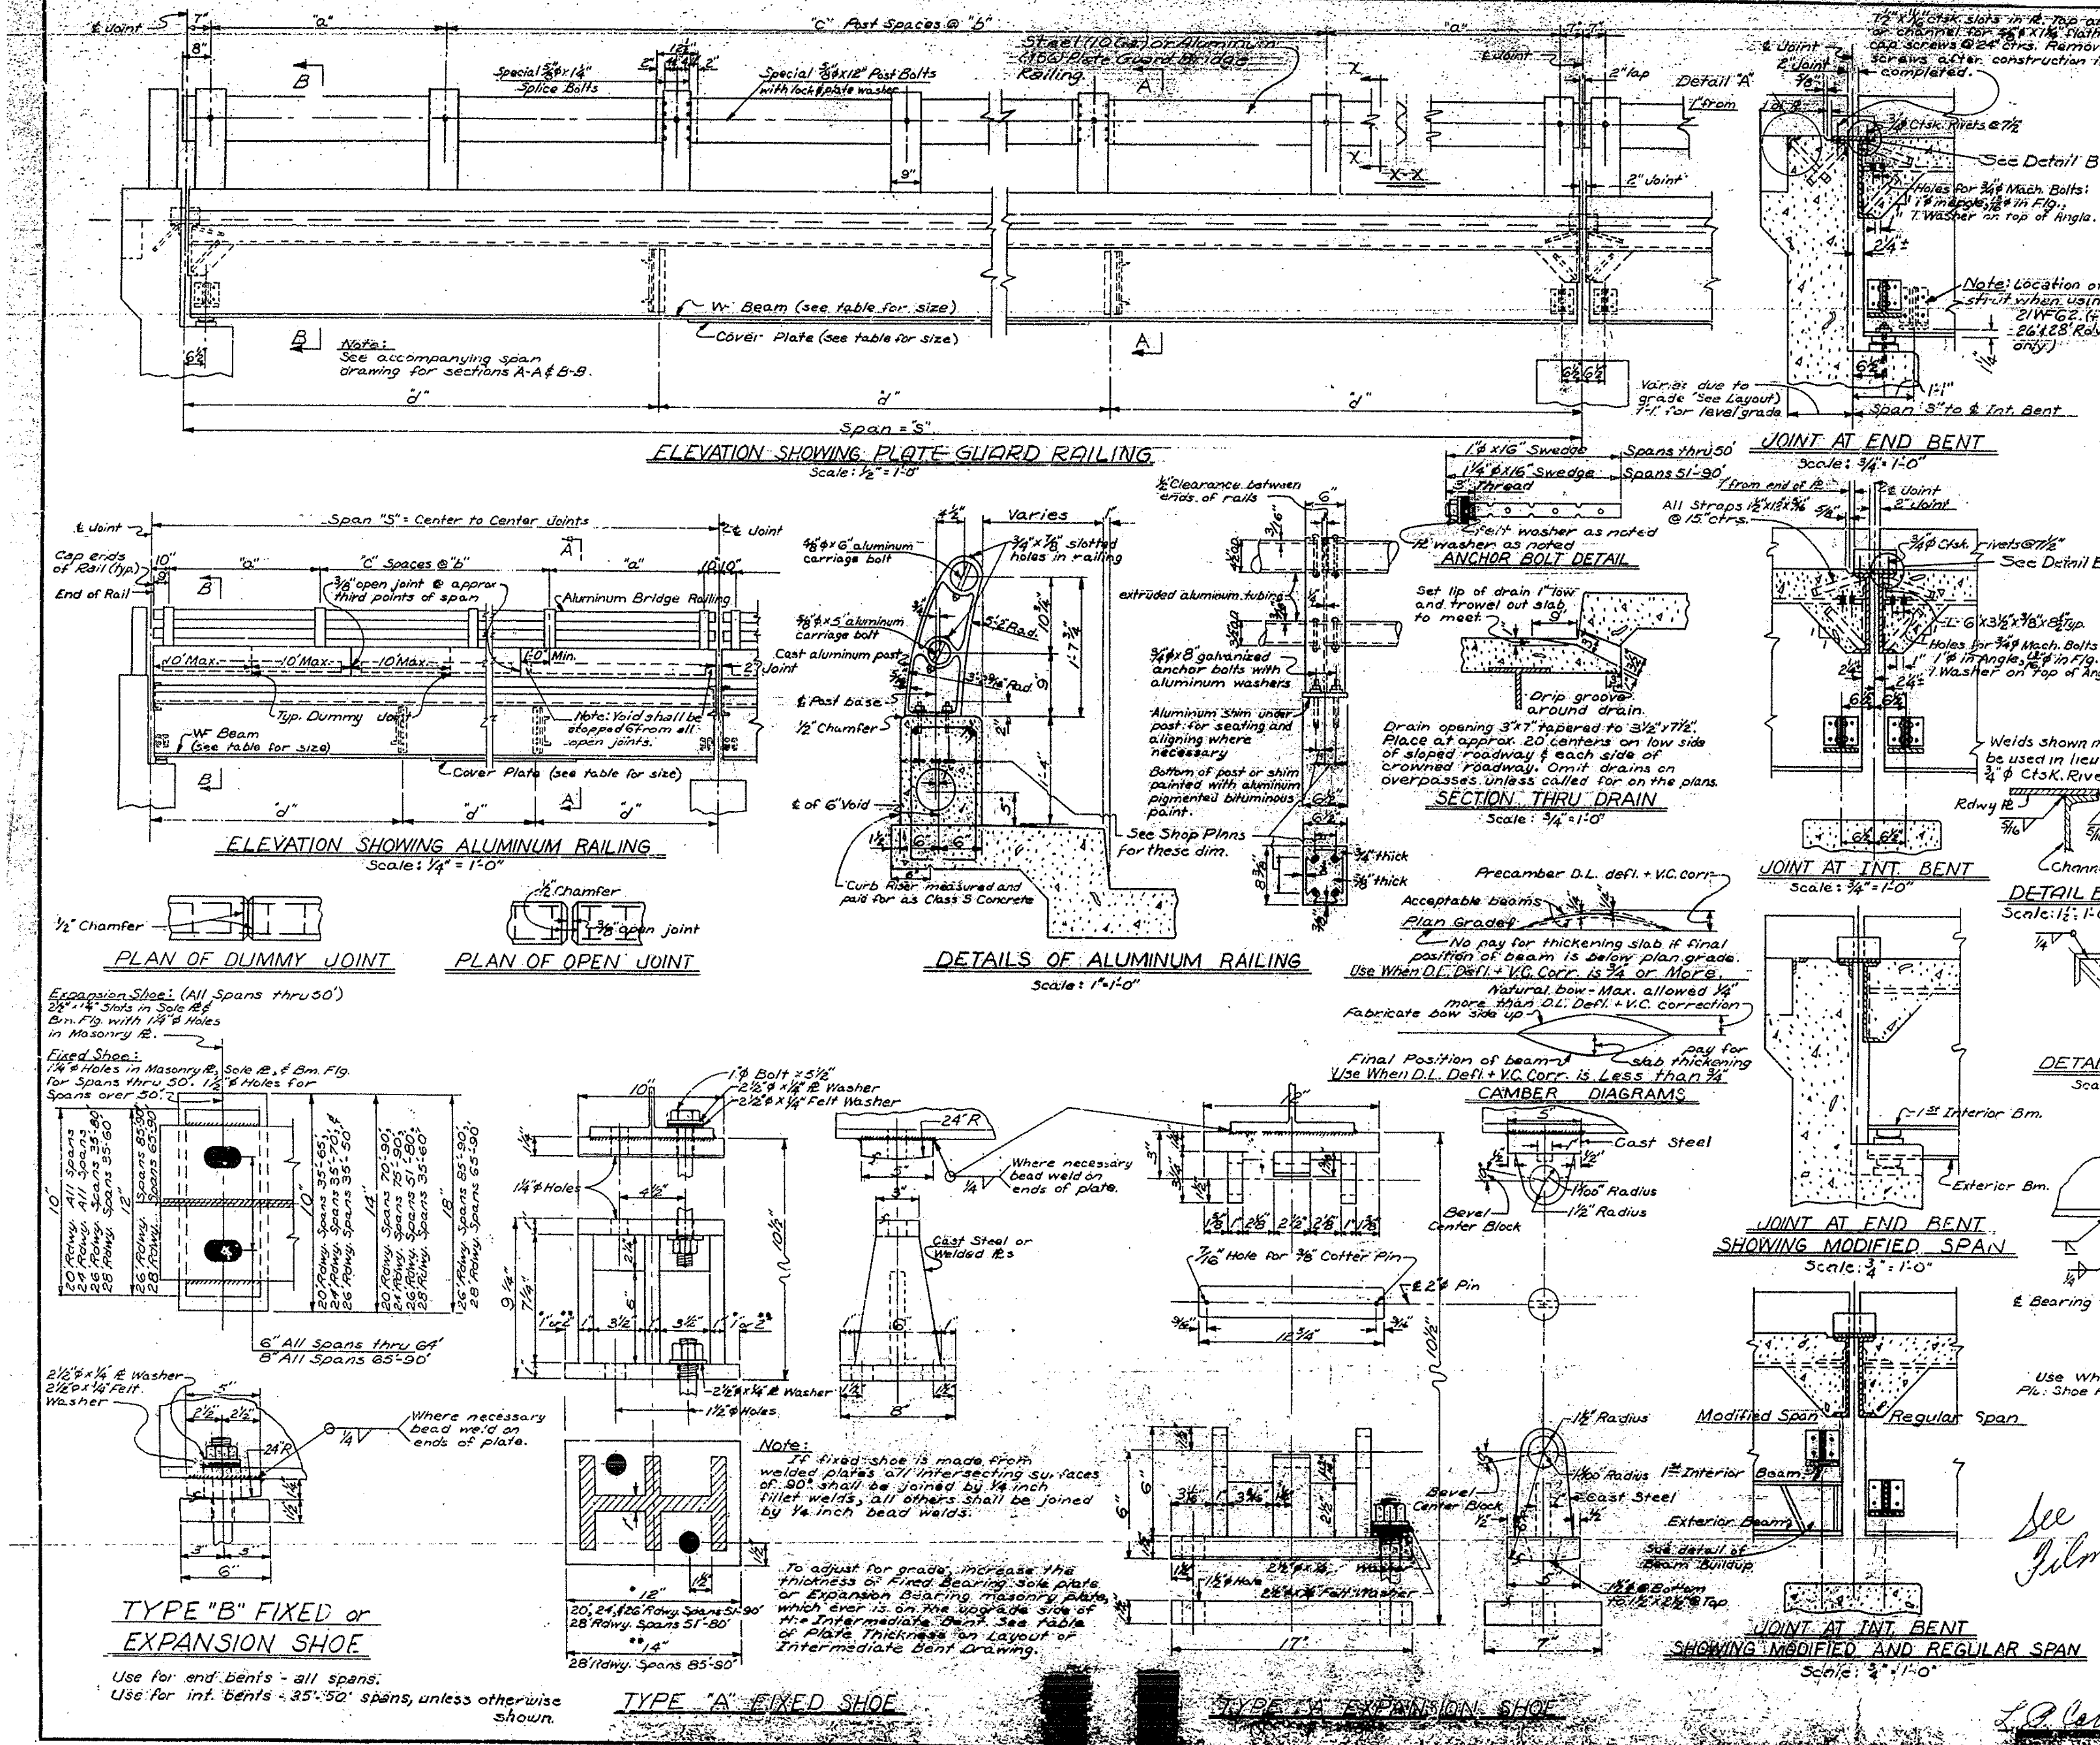
(1) I-Bm. Span Details of Br. No. 05082



GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered ¾" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts. Rivets: ¾"φ, Open holes 13/16"φ except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat - red lead tinted with lamp black. Second coat - aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in a manner set forth in the Specifications. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All Steel shall be ASTM A-36 unless otherwise noted.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

All chamfers on concrete riser for rail are to be ½".

Shop drawings showing details of railing shall be submitted and approval secured before fabrication is begun.

The aluminum bridge railing, including posts and fasteners, shall be paid for at the unit price bid per linear foot for "Aluminum Bridge Railing."

A rail connection utilizing set screws is an acceptable alternate and may be supplied at the Contractor's option.

Outside surfaces of flanges of cast aluminum posts shall be given a No. 220 grit belt finish after which all exposed surfaces of posts shall receive one coat of clear lacquer.

If Steel or Aluminum Plate Guard Bridge Railing is used it shall be the type shown or an equivalent rigid type as approved by the Engineer. The rail including posts and fastenings shall be paid for at the unit price bid per linear foot for "Steel or Aluminum Plate Guard Bridge Railing."

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strike off extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured not less than 72 hours shall elapse before pouring the end sections. End sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours.

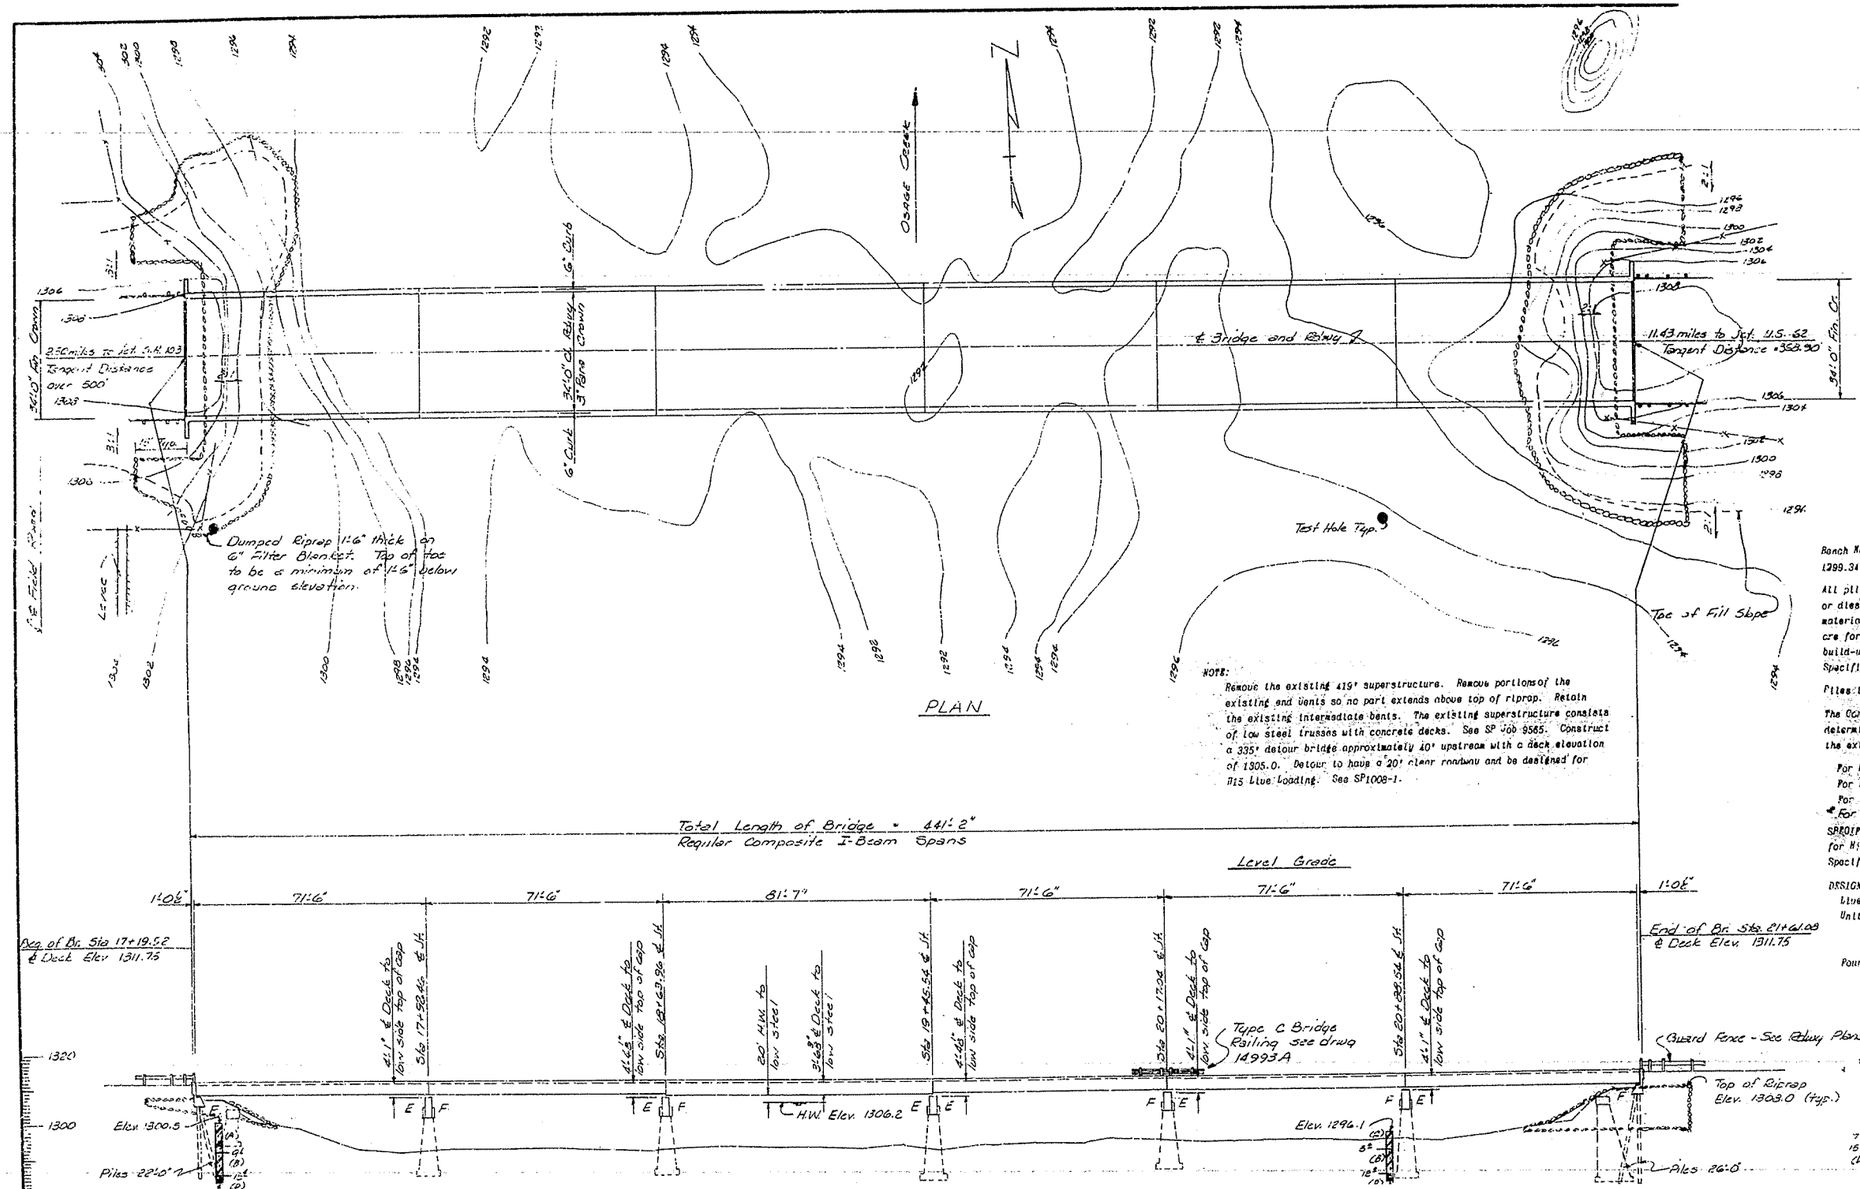
Layout of Bridge No. 2771A



NOTE:
Remove the existing 419' superstructure. Remove portions of the existing end bents so no part extends above top of riprap. Retain the existing intermediate bents. The existing superstructure consists of low steel trusses with concrete decks. See SP Job 9565. Construct a 335' detour bridge approximately 40' upstream with a deck elevation of 1305.0. Detour to have a 20' clear roadway and be designed for H15 Live Loading. See SP1008-1.

GENERAL NOTES

Bench Mark - Nail in root 30" Elm, 60' Rt., Station 17 + 80. Elevation 1299.34.

All piling shall be 12BP53 and shall be driven with an approved air, steam, or diesel hammer to a minimum capacity of 55 tons per pile and into the material designated as limestone on the boring logs. Lengths of pile shown are for estimating quantities only. Order lengths shown: cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in end bents to be driven after embankment to subgrade is in place.

The Contractor shall make check measurements of the existing structure and determine all dimensions and adjustments necessary to fit the new work to the existing construction.

GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered 3/4" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts.

Rivets: 3/4"ø, open holes 13/16"ø except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat-red lead tinted with lamp black. Second coat-aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in accordance with Sec. 806.54, including alternate, of the Standard Specifications. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All steel shall be ASTM A-36 unless otherwise noted.

Anchor bolts shall be galvanized to conform to ASTM Specification, Designation A153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

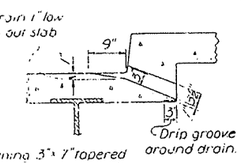
Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured, not less than 72 hours shall elapse before pouring the end sections. End sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours. A minimum of 72 hours shall elapse (1) between completion of the slab and the pouring of the curb section if poured separately, and (2) between the completion of the curb and the pouring of the type A rail parapet. Posts for Type B or C rail may be poured 24 hours after completion of the curb.

For details of Bridge Railing see Dwg. No. 14992 or 14993 as shown on Bridge Layout.

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction Edition of 1959, the 1966 Supplemental Specifications thereto and applicable Special Provisions.



Drain opening 3" x 7" tapered to 3½" x 7½". Place at approx. 20' ctrs. on low side of sloped roadway & each side of crowned roadway. Omit drains on grade separation structures unless called for on the plans.

GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered ¾" unless otherwise noted.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock.

In general, all construction joints in abutments and piers shall be horizontal and shall be provided with keys not less than 3" high covering the middle third of both dimensions.

SPECIFICATIONS:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1946.

TYPICAL SLAB POURING SCHEDULE FOR 60'-0" CANTILEVER I-BEAM UNITS

Slab pours are to be made as scheduled by number as shown above. Pours bearing like same number may be made separately or simultaneously, but shall always be poured in order of their subscript letter. After three consecutive pours of the first series from one end have been made, pours of the second series may be begun. Pours of the first series however are to be kept three pours ahead of the second series, until completed. This pouring procedure to apply to remaining series also.

Pours 4c and 4D to be the last pours.

GENERAL NOTES

All concrete to be Class S". All exposed corners to be chamfered ¾" unless otherwise noted.

Rivets ¾" ø. Open holes, ⅞" ø. Use machine bolts where bolts are indicated.

Ends of all stiffener angles shall be ground to bear against beam flanges.

Cross beams and strut connections are to be sub-punched to ⅝" and reamed to a metal template.

Structural shapes of equal or greater strength may be substituted for shapes shown but payment will be made on shapes shown or actually used whichever is the lesser.

All weld connections to be ⅜" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.

All bearing plates are to be structural steel. All top plates to be shop welded to I-Beams with ⅜" fillet welds extending entire length of all edges and surfaces in contact. No toler-ance will be permitted in angle between flange and web of beams at points of bearing.

Masonry plates to be sealed on 3 layers of burlap saturated with red lead.

All bearing and roadway expansion devices are to be paid for at the unit price bid per pound for Structural Steel in Beam Spans.

Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.

Field Paint:- 1st coat, white lead tinted with lamp black. 2nd coat, aluminum paint.

Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of 'Reinforcing Steel.' Shop lists and diagrams must be submitted for approval.

Beams in all spans to be erected before pouring of concrete slab begins.

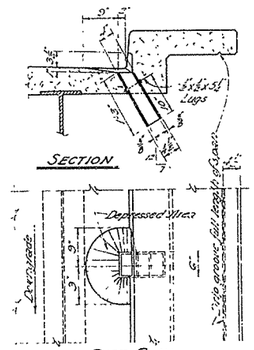
CAMBER:- Unless camber is provided for bridges on a vertical curve the slab is to be approximately ⅜" thicker at mid-span and ¾" thicker at the quarter points to provide for dead load deflection of steel beams. For camber-ing, the span length shall be the distance center to center of piers.

The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for "Steel Plate Guard Rail." To be painted the same as structural steel.

Cast iron drains are to be paid for as 'reinforcing steel' and to be painted the same as structural steel.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the specifications, submitted and approval secured before fabrication is begun.

SPECIFICATIONS:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1940.



DETAILS OF C.I. DRAINS

Scale: ¾" = 1'0"

Note:- Place drain openings on each side of roadway at 15'-0" ctrs. beginning 3'0" from ℄ of piers for cantilever spans and 9'0" from ℄ of suspended span. Omit the two drains near-est abutments if the end spans are above a high fill.

Set lip of drains 1" low and trowel oil slab to meet. Weight of drain = 29#.

GENERAL NOTES

All concrete to be Class "S." All exposed corners to be chamfered 3/4" unless otherwise noted.

Rivets, 3/4" ⌀. Open holes, 13/16" ⌀. Use machine bolts where bolts are indicated.

Ends of all stiffener angles shall be ground to bear against beam flanges.

Structural shapes of equal or greater strength may be substituted for shapes shown but payment will be made on shapes shown or actually used whichever is the lesser.

All weld connections to be 5/16" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for "Welded Highway and Railway Bridges" of the American Welding Society.

All bearing plates are to be structural steel. All top plates to be shop welded to I-Beams with 3/8" fillet welds extending entire length of all edges and surfaces in contact. No tolerance will be permitted in angle between flange and web of beams at points of bearing. Masonry plates to be seated on 3 layers of burlap saturated with red lead.

All bearing and roadway expansion devices are to be paid for at the unit price bid per pound for "Structural Steel in Beam Spans".

Cast iron drains are to be paid for as "reinforcing steel" and are to be painted same as structural steel.

Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.

Field Paint:- 1st coat, white lead tinted with lamp black. 2nd coat, aluminum paint.

Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of "reinforcing steel". Shop lists and diagrams must be submitted for approval.

CAMBER:- Unless camber is provided for bridge on a vertical curve the slab is to be approximately 1/2" thicker at mid-span and 3/8" thicker at the quarter points to provide for dead load deflection of steel beams.

Slab pours are to be made as scheduled by number as shown above the Elevation above. Pours bearing the same number may be made separately or simultaneously.

The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for "Steel Plate Guard Rail." To be painted the same as structural steel.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the specifications, submitted and approval secured before fabrication is begun.

Cross beams and strut connections are to be sub-punched to 11/16" ⌀ and reamed to a metal template

SPECIFICATIONS:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1940.

DESIGN LIVE LOAD - H-15 LOADING A.A.S.H.O. 1949

Load Distribution to Interior Beams:- Dead Load 790#/Lin.Ft.

TYPICAL SLAB POURING SCHEDULE FOR 75'-0" CANTILEVER I-BEAM UNITS

Slab pours are to be made as scheduled by number as shown above. Pours bearing the same number may be made separately or simultaneously, but shall always be poured in order of their subscript letter. After three consecutive pours of the first series from one end have been made, pours of the second series may be begun. Pours of the first series however are to be kept three pours ahead of the second series, until completed. This pouring procedure to apply to remaining series also.
* Pours 4A and 4C to be the last pours.

GENERAL NOTES

All concrete to be Class 'S'. All exposed corners to be chamfered ¾" unless otherwise noted.
Rivets, ¾" ø. Open holes, ⅞" ø. Use machine bolts where bolts are indicated.
Ends of all stiffener angles shall be ground to bear against beam flanges.
Structural shapes of equal or greater strength may be substituted for shapes shown but payment will be made on shapes shown or actually used whichever is the lesser.
All weld connections to be ⅜" fillet shop welds; except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.
All bearing plates are to be structural steel. All top plates to be shop welded to I-Beams with ⅜" fillet welds extending entire length of all edges and surfaces in contact. No tolerance will be permitted in angle between flange and web of beams at points of bearing. Masonry plates to be seated on 3 layers of burlap saturated with red lead.
All bearing and roadway expansion devices are to be paid for at the unit price bid per pound for 'Structural Steel in Beam Spans'.
Cast iron drains are to be paid for as 'reinforcing steel' and to be painted same as structural steel.
Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.
Field Paint:- 1st coat, white lead tinted with lamp black. 2nd coat, aluminum paint.
Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.
All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.
Wire supports will not be paid for directly, but will be considered subsidiary to the item of 'Reinforcing Steel'. Shop lists and diagrams must be submitted for approval.
Beams in all spans to be erected before pouring of concrete slab begins.
Camber:- Unless camber is provided for bridges on a vertical curve, the slab is to be approximately ½" thicker at mid-span and ⅝" thicker at the quarter points to provide for dead load deflection of steel beams. For cambering, the span length shall be the distance center to center of piers.
The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for 'Steel Plate Guard Rail'. To be painted the same as structural steel.
This drawing shows general features of design only. Shop drawings shall be made in accordance with the specifications, submitted and approval secured before fabrication is begun.
The holes for all beam splices shall be sub-punched or drilled to ⅝" ø and reamed to ¾" ø while beams are assembled in the shop. While assembled for reaming all parts are to be match-marked. A match-marking system shall be such as to prevent interchange or reversal of splice material. A match-marking diagram shall be furnished the Engineer.
Cross beam and strut connections are to be sub-punched to ⅞" ø and reamed to ¾" ø a metal template.
Specifications:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1930.

TYPICAL SLAB POURING SCHEDULE FOR 60'-0" CANTILEVER I-BEAM UNITS

Slab pours are to be made as scheduled by number as shown above. Pours bearing like same number may be made separately or simultaneously, but shall always be poured in order of their subscript letter. After three consecutive pours of the first series from one end have been made, pours of the second series may be begun. Pours of the first series however are to be kept three pours ahead of the second series until completed. This pouring procedure to apply to remaining series also. Pours 4c and 4d to be the last pours.

GENERAL NOTES

All concrete to be Class S". All exposed corners to be chamfered ¾" unless otherwise noted.
Rivets, ⅞" ø. Open holes, ⅞" ø. Use machine bolts where bolts are indicated.
Ends of all stiffener angles shall be ground to bear against beam flanges.
Cross beams and strut connections are to be sub-punched to ⅝" and reamed to a metal template.

Structural shapes of equal or greater strength may be substituted for shapes shown but payment will be made on shapes shown or actually used whichever is the lesser.

All weld connections to be ⅜" fillet shop welds, except as noted. Welding to be by the electric arc process in accordance with current specifications for Welded Highway and Railway Bridges of the American Welding Society.

All bearing plates are to be structural steel. All top plates to be shop welded to I-Beams with ⅜" fillet welds extending entire length of all edges and surfaces in contact. No tolerance will be permitted in angle between flange and web of beams at points of bearing.

Masonry plates to be sealed on 3 layers of burlap saturated with red lead.

All bearing and roadway expansion devices are to be paid for at the unit price bid per pound for "Structural Steel in Beam Spans."

Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.

Field Paint:- 1st coat, white lead tinted with lamp black. 2nd coat, aluminum paint.

Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel." Shop lists and diagrams must be submitted for approval.

Beams in all spans to be erected before pouring of concrete slab begins.

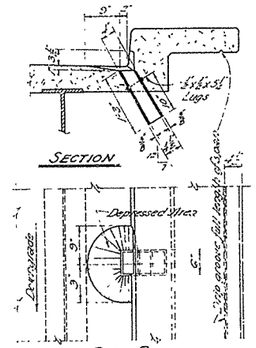
Camber:- Unless camber is provided for bridges on a vertical curve the slab is to be approximately ⅜" thicker at mid-span and ⅜" thicker at the quarter points to provide for dead load deflection of steel beams. For cambering, the span length shall be the distance center to center of piers.

The steel plate guard rail shall be of the type shown or an equivalent rigid type as approved by the Engineer. The steel plate guard rail, including all concrete posts, shall be paid for at the unit price bid per linear foot for "Steel Plate Guard Rail." To be painted the same as structural steel.

Cast iron drains are to be paid for as "reinforcing steel" and to be painted the same as structural steel.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the specifications, submitted and approval secured before fabrication is begun.

Specifications:- Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1940.



DETAILS OF C.I. DRAINS

Scale:- ¾" = 1'0"

NOTE:- Place drain openings on each side of roadway at 15'0" ctrs. beginning 3'0" from ℄ of piers for cantilever spans and 9'0" from ℄ of suspended span. Omit the two drains near each abutment of the end spans are above a high fill.

Set lip of drains 1" low and trowel out slab to meet. Weight of drain = 29#.

DESIGN LIVE LOAD - H-15 LOADING A.S.H.O. 1949

Load Distribution to Interior Beams:- Dead Load [illegible] Impact
Live Load 1.2 Wheels or 0.633 Lane ... Impact

Load Distribution to Outside Beams:- Dead Load 990# / Lin. Ft.
Live Load 0.92 Wheels or 0.49 Lanes, 30% Impact.

GENERAL NOTES

All concrete to be poured in the dry. All exposed corners to be chamfered ¾" unless otherwise noted.

All concrete piers and abutments to be Class 'A'. Concrete in deck to be Class 'S'. Concrete deck slabs on truss spans to be poured in the order indicated on the sequence diagram, unless otherwise directed by the Engineer.

In general, all construction joints in piers and abutments shall be horizontal and shall be provided with keys not less than 3" high covering the middle third of both dimensions.

Rock excavation shall be made to neat lines of concrete footings. Care shall exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated faces of rock.

The Contractor shall submit for approval an outline of the proposed method of erecting truss spans before erection is begun.

NOTE: Dimensions relating to reinforcing steel are to centers of bars

GENERAL NOTES

All concrete to be Class 'S'. All exposed corners to be chamfered 3/4" unless otherwise noted.

Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of 'reinforcing steel'. Shop lists and diagrams of type to be used must be submitted for approval.

Rivets: 7/8". Open holes: 15/16". Where bolts are indicated, use machine bolts.

All welded connections to be 5/16" shop fillet welds unless otherwise noted.

DESIGN LIVE LOAD: H-20 LOADING A.A.S.H.O. 1944

EXPANSION DETAILS AT U6'

EXPANSION DETAILS AT PIER NO. 5

EXPANSION DETAILS AT ABUTMENT NO. 2

SHOE NOTES. All shoes to be built from structural steel plates and shapes. All material to be welded together with ⅜" Fillet welds extending entire length of all edges and surfaces in contact. Surfaces in contact to be milled to bear before welding.

Masonry plates shall be finally seated on 3 layers of burlap saturated with red lead. This work and material to be included in the unit price bid for "Structural Steel in Beam Spans".

NOTE: All shoes to be Field bolted to 27" C.B's with 1" ϕ machine bolts.

DETAILS OF SHOES
Scale: 3" = 1'-0"

S7	⅝" ϕ	10	10'-6"	
P01	⅝" ϕ	40	2'-5"	
P02	⅝" ϕ	50	3'-5"	

NOTE: Dimensions relating to reinforcing steel are to centers of bars.

GENERAL NOTES

All concrete to be Class "S". All exposed corners to be chamfered ¾" unless otherwise noted.

Reinforcing steel to be deformed bars of structural or intermediate grade. Shop lists and bending diagrams must be submitted and approval secured before fabrication is begun.

All reinforcing steel shall be accurately located in the forms and firmly held in place by means of steel wire supports, sufficient in number and size, to prevent displacement during the course of construction and to keep the steel a proper distance from the forms.

Wire supports will not be paid for directly but will be considered subsidiary to the item of "reinforcing steel". Shop lists and diagrams of the type to be used must be submitted for approval.

Rivets - ¾" ϕ. Open holes - ⅞" ϕ. Where holes are indicated, use machine bolts. Use ¾" ϕ rivets in handrail.

Structural shapes, of equal or greater [illegible] may be substituted for shapes shown, but payment will be made on shapes shown or actually [illegible] is the lesser.

All welded connections to be ⅜" min. fillet welds, except as noted for shoes. Welding to be by the electric arc process.

Ends of stiffener angles to be ground to bear against beam flanges.

All bearing and roadway expansion devices to be paid for at the unit price bid for "Structural Steel in Beam Spans".

Cast iron drains to be paid for at the unit price bid for "Structural Steel in Beam Spans", and are to be painted the same as structural steel.

Shop Paint:- All structural steel shall be given one coat of red lead and raw linseed oil before shipment, except surfaces in contact with concrete.

Field Paint:- 1st coat, white lead tinted with lamp black; 2nd coat, aluminum paint.

To provide for deflection of girders due to dead load, the slab shall be approximately ¾" thicker at mid-span and 4" thicker at the quarter points.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the specification, and shall be submitted and approval secured before fabrication is begun.

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Road and Bridge Construction, adopted March 1, 1940.

DESIGN LIVE LOAD: H-20 LOADING A.A.S.H.O. 1944

Load Distribution to Interior Beams:- Dead Load 710 #/Lin. Ft.
Live Load 1.20 Wheels 30% Impact

Load Distribution to Outside Beams: Dead Load 990 #/Lin. Ft.
Live Load 0.833 Wheels 30% Impact

UNIT STRESSES: Class "S" Concrete (n=10) 1000 #/□"
Reinforcing Steel 18000 #/□"
Structural Steel 18000 #/□"

BLAST PLATE NOTES:

The blast plates are to be made of wrought iron or alloy steel U.S.S. Cor-Ten or Mayari R, and are to be paid for at the unit price bid per pound for 'Blast Plates'. Blast plates are to be painted the same as structural steel.

HANDRAIL NOTES:

The concrete rail posts and structural steel rail members shall be paid for at the unit price bid per linear foot foot for 'Concrete and Structural Steel Railing'.

Handrail members to extend over two panels.

All horizontal lines of handrail to be parallel to the finished grade.

All vertical lines shall be plumb in their final position, except sides of post brackets adjacent to roadway expansion joints.

1500 FT	1 MILE AHEAD

GENERAL NOTES:

1. ALL TRAFFIC CONTROL DEVICES USED ON ROAD CONSTRUCTION SHALL CONFORM TO THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, LATEST EDITION, AND TO THE STANDARD HIGHWAY SIGNS, LATEST EDITION, OR AS APPROVED BY THE FEDERAL HIGHWAY ADMINISTRATION.
2. TRAFFIC CONTROL DEVICES SHALL BE SET UP JUST BEFORE THE START OF CONSTRUCTION OPERATIONS AND SHALL BE PROPERLY MAINTAINED DURING THE TIME SUCH CONDITIONS EXIST. THEY SHALL REMAIN IN PLACE ONLY AS LONG AS NEEDED AND REMOVED THEREAFTER.
3. EXISTING SIGNS AND CONSTRUCTION SIGNS SHALL BE KEPT IN PROPER POSITION, AND BE CLEAN AND LEGIBLE AT ALL TIMES. SIGNS THAT DO NOT APPLY TO EXISTING CONDITIONS SHALL BE REMOVED. SIGNS THAT ARE DAMAGED, DEFACED, OR THAT ACCUMULATE DIRT DURING CONSTRUCTION SHALL BE CLEANED, REPAIRED, OR REPLACED.
- 4. SIGNS ARE USUALLY MOUNTED ON A SINGLE POST, ALTHOUGH THOSE WIDER THAN 36" OR LARGER THAN 10 SQ. FT. SHALL BE MOUNTED ON TWO POSTS OR ABOVE A TYPE III BARRICADE.
- 5. SIGN POSTS DIRECT BURIED IN SOIL SHALL BE 2 LB. MINIMUM CHANNEL POST OR 4"x4" WOOD POSTS. CHANNEL POSTS SHALL BE PAINTED GREEN. WOOD POSTS SHALL BE PAINTED WHITE. ALL POSTS SHALL BE NEATLY CONSTRUCTED, AND SHALL BE REPLUMBED, CLEANED, OR REPAIRED AS NEEDED FOR THE DURATION OF THE JOB. THERE SHALL NOT BE MORE THAN 2 POSTS IN A 7' PATH FOR WOOD OR CHANNEL POSTS. ANY CHANNEL POST SPLICE SHALL BE IN ACCORDANCE WITH STANDARD DRAWING TC-3.
6. POST MOUNTED SIGNS IN RURAL AREAS SHALL BE CONSTRUCTED WITH THE NEAR EDGE OF THE SIGN FROM 6 TO 12 FEET FROM THE PAVEMENT EDGE. SIGNS IN URBAN AREAS AND BARRICADE MOUNTED SIGNS SHALL BE MOUNTED A MINIMUM OF 2 FEET FROM THE PAVEMENT EDGE.
7. ALL POST AND BARRICADE MOUNTED SIGNS MOUNTED IN URBAN AREAS SHALL BE MOUNTED A MINIMUM DISTANCE OF 7' FROM THE BOTTOM OF THE SIGN TO THE ROADWAY SURFACE. ALL POST AND BARRICADE MOUNTED SIGNS MOUNTED IN RURAL AREAS SHALL BE MOUNTED A MINIMUM DISTANCE OF 7' FROM THE BOTTOM OF THE SIGN TO THE ROADWAY SURFACE, EXCEPT A MINIMUM OF 6' SHALL BE USED WHEN MOUNTING AN ADVISORY SIGN BELOW A WARNING SIGN. TEMPORARY SIGNS MAY BE MOUNTED ON PORTABLE SUPPORTS FOR INTERMEDIATE TERM STATIONARY WORK CONDITIONS. THE SIGNS MINIMUM MOUNTING HEIGHT SHALL BE 5'. RETROREFLECTIVE DEVICES SHALL BE USED. TEMPORARY SIGNS MAY BE MOUNTED ON PORTABLE SUPPORTS FOR SHORT-TERM, SHORT DURATION, AND MOBILE CONDITIONS. THEY SHALL BE NO LESS THAN ONE (1) FOOT ABOVE THE TRAVELED WAY. LONG-TERM STATIONARY SIGNS SHALL BE DIRECT BURIED IN SOIL, UNLESS CONDITIONS NECESSITATE THE USE OF PORTABLE SIGNS, OR AS APPROVED BY THE ENGINEER. CONCRETE PADS, CONCRETE OR ROCK BALLAST, OR OTHER SOLID MATERIALS SHALL NOT BE UTILIZED WITH PORTABLE SIGN SUPPORTS.
8. FLAGGERS SHALL USE REFLECTORIZED STOP-SLOW PADDLES. FLAGS MAY BE USED ONLY FOR EMERGENCY SITUATIONS.
9. MOST OF THE SIGNS SHOWN ARE ORIENTED TO THE RIGHT, HOWEVER, THIS DOES NOT PRECLUDE THE USE OF MIRROR IMAGES OF THESE SIGNS WHERE THE REVERSE ORIENTATION MIGHT BETTER CONVEY TO MOTORISTS THE PROPER DIRECTION OF MOVEMENT.
10. R55-1 SIGNS SHALL BE PLACED AT LEAST 1500' BUT NOT MORE THAN 1 MILE IN ADVANCE OF THE WORK ZONE. IF A SPEED LIMIT REDUCTION IS IN EFFECT, THE SIGN SHALL BE PLACED A MINIMUM OF 500' IN ADVANCE OF THE "REDUCED SPEED AHEAD" SIGN.

• NOTE: SUPPORTS FOR SIGNS, BARRICADES, AND VERTICAL PANELS THAT ARE DIFFERENT FROM THE REQUIREMENTS SHOWN IN NOTES 4 & 5, BUT MEET THE REQUIREMENTS OF NCHRP-350 OR MANUAL FOR ASSESSING SAFETY HARDWARE (MASH), WILL BE ACCEPTED. COMPLIANCE WITH THE REQUIREMENTS OF NCHRP-350 OR MANUAL FOR ASSESSING SAFETY HARDWARE (MASH) IS REQUIRED FOR ALL PROJECTS.

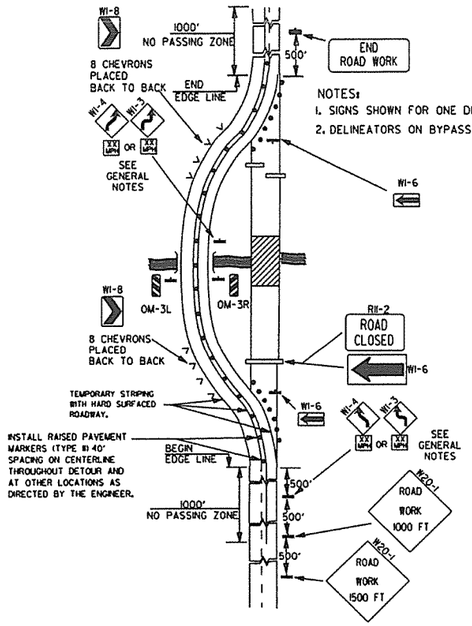
ARKANSAS STATE HIGHWAY COMMISSION

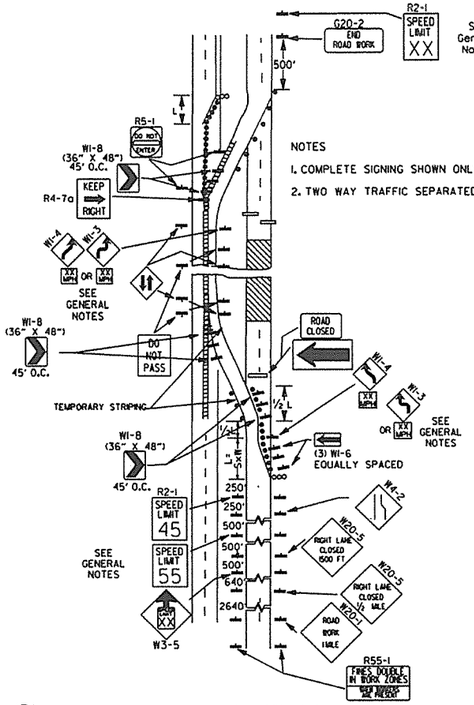
STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION

STANDARD DRAWING TC-1



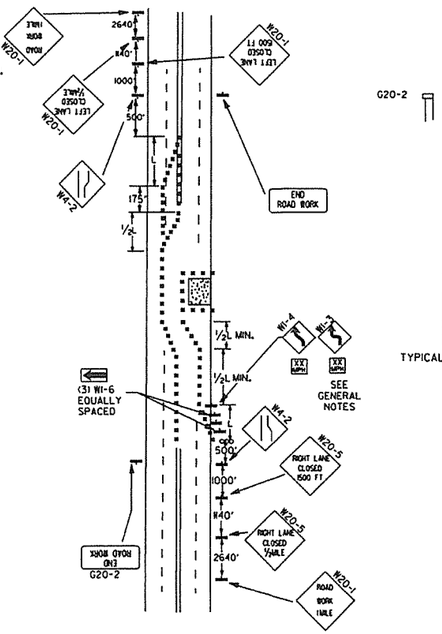
NOTES:
1. SIGNS SHOWN FOR ONE DIRECTION OF TRAVEL ONLY.
2. DELINEATORS ON BYPASS WHERE NEEDED.

(A) TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES ON A 2-LANE HIGHWAY WHERE THE ENTIRE ROADWAY IS CLOSED AND A BYPASS DETOUR IS PROVIDED.

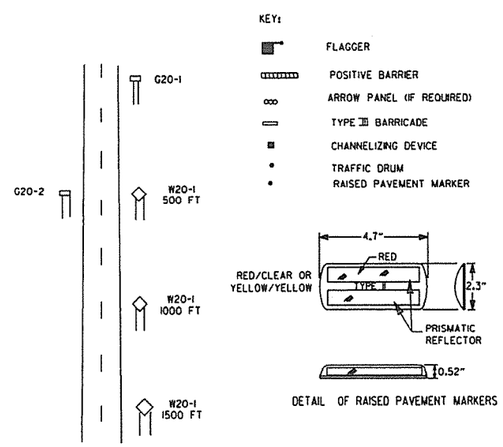


NOTES
1. COMPLETE SIGNING SHOWN ONLY IN CROSSOVER DIRECTION.
2. TWO WAY TRAFFIC SEPARATED WITH POSITIVE BARRIER.

(B) TYPICAL APPLICATION - 4-LANE DIVIDED ROADWAY WHERE ONE ROADWAY IS CLOSED.



(C) TYPICAL APPLICATION - 4-LANE UNDIVIDED ROADWAY WHERE HALF OF THE ROADWAY IS CLOSED.



TYPICAL ADVANCE WARNING SIGN PLACEMENT

TAPER FORMULAE:

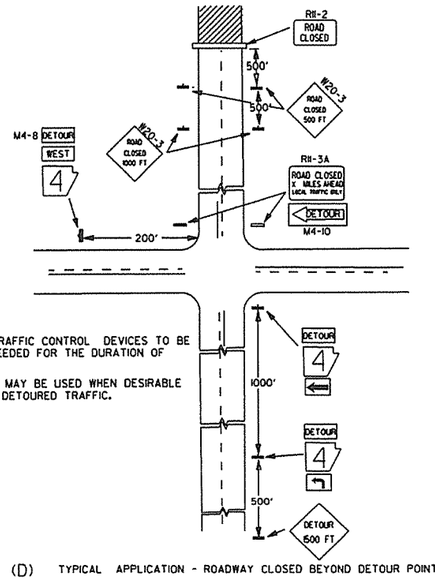
L=SXW FOR SPEEDS OF 45MPH OR MORE.

$L = \frac{WS^2}{60}$ FOR SPEEDS OF 40MPH OR LESS.

WHERE:
L= MINIMUM LENGTH OF TAPER.
S= NUMERICAL VALUE OF POSTED SPEED LIMIT PRIOR TO WORK OR 85TH PERCENTILE SPEED.
W= WIDTH OF OFFSET.

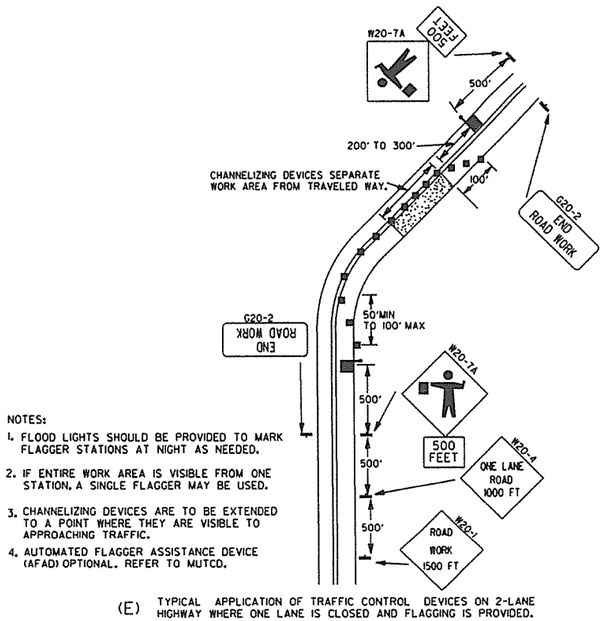
GENERAL NOTES:

1. ADVISORY SPEED POSTED ON W1-3 OR W1-4 CURVE WARNING SIGNS TO BE DETERMINED AT SITE. USE W1-4 WHEN SPEED IS GREATER THAN 30MPH AND W1-3 WHEN 30MPH OR LESS.
2. WHEN THE EXISTING SPEED LIMIT IS 55MPH AND THE PLANS REQUIRE A SPEED LIMIT OF 45MPH, THE R2-1(55) SHALL BE OMITTED AND THE W3-5 SHALL BE INSTALLED AT THAT LOCATION. ADDITIONAL R2-1 45MPH SPEED LIMIT SIGNS SHALL BE INSTALLED AT A MAXIMUM OF 1MILE INTERVALS. AT THE END OF THE WORK AREA A R2-1(XX) SHALL BE INSTALLED TO MATCH ORIGINAL SPEED LIMIT.
3. WHEN THE EXISTING SPEED LIMIT IS 65MPH AND THE PLANS REQUIRE A SPEED LIMIT OF 55MPH, THE R2-1(45) SHALL BE OMITTED. ADDITIONAL R2-1 55MPH SPEED LIMIT SIGNS SHALL BE INSTALLED AT A MAXIMUM OF 1MILE INTERVALS. AT THE END OF THE WORK AREA A R2-1(XX) SHALL BE INSTALLED TO MATCH ORIGINAL SPEED LIMIT.
4. THE MAXIMUM SPACING BETWEEN CHANNELIZING DEVICES IN A TAPER SHOULD BE APPROXIMATELY EQUAL IN FEET TO THE SPEED LIMIT. BEYOND THE TAPER, MAXIMUM SPACING SHALL BE TWO TIMES THE SPEED LIMIT, OR AS DIRECTED BY THE ENGINEER.
5. WARNING LIGHTS AND/OR FLAGS MAY BE MOUNTED TO SIGNS OR CHANNELIZING DEVICES AT NIGHT AS NEEDED.
6. PAVEMENT MARKINGS NO LONGER APPLICABLE WHICH MIGHT CREATE CONFUSION IN THE MINDS OF VEHICLE OPERATORS SHALL BE REMOVED OR OBLITERATED AS SOON AS PRACTICABLE.
7. TRAILER MOUNTED DEVICES SUCH AS ARROW PANELS AND PORTABLE CHANGEABLE MESSAGE SIGNS SHALL BE DELINEATED BY AFFIXING CONSPICUITY MATERIAL IN A CONTINUOUS LINE ON THE FACE OF THE TRAILER. WHEN PLACED ON OR ADJACENT TO THE SHOULDER AND NOT BEHIND A POSITIVE BARRIER, THESE DEVICES SHALL BE DELINEATED BY PLACING FIVE (5) TRAFFIC DRUMS, EQUALLY SPACED ALONG THE TRAFFIC SIDE OF THE DEVICE.
8. DIMENSIONS SHOWN FOR RAISED PAVEMENT MARKERS ARE TYPICAL. THE CONTRACTOR MAY SUBSTITUTE SIMILAR MARKERS WITH THE APPROVAL OF THE ENGINEER. REQUESTING APPROVAL FOR SIMILAR MARKERS MAY BE MADE BY REFERRING TO THE AHTD QUALIFIED PRODUCTS LIST.



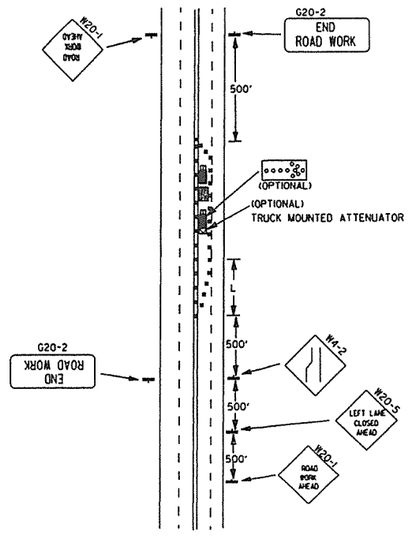
NOTES:
1. REGULATORY TRAFFIC CONTROL DEVICES TO BE MODIFIED AS NEEDED FOR THE DURATION OF THE DETOUR.
2. STREET NAMES MAY BE USED WHEN DESIRABLE FOR DIRECTING DETOURED TRAFFIC.

(D) TYPICAL APPLICATION - ROADWAY CLOSED BEYOND DETOUR POINT.



NOTES:
1. FLOOD LIGHTS SHOULD BE PROVIDED TO MARK FLAGGER STATIONS AT NIGHT AS NEEDED.
2. IF ENTIRE WORK AREA IS VISIBLE FROM ONE STATION, A SINGLE FLAGGER MAY BE USED.
3. CHANNELIZING DEVICES ARE TO BE EXTENDED TO A POINT WHERE THEY ARE VISIBLE TO APPROACHING TRAFFIC.
4. AUTOMATED FLAGGER ASSISTANCE DEVICE (AFAD) OPTIONAL. REFER TO MUTCD.

(E) TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES ON 2-LANE HIGHWAY WHERE ONE LANE IS CLOSED AND FLAGGING IS PROVIDED.



(F) TYPICAL APPLICATION - 4-LANE UNDIVIDED ROADWAY WITH INSIDE LANE CLOSED.

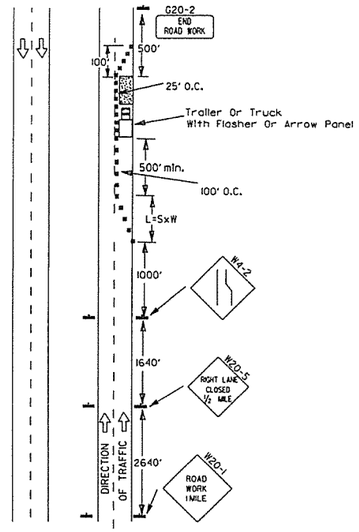
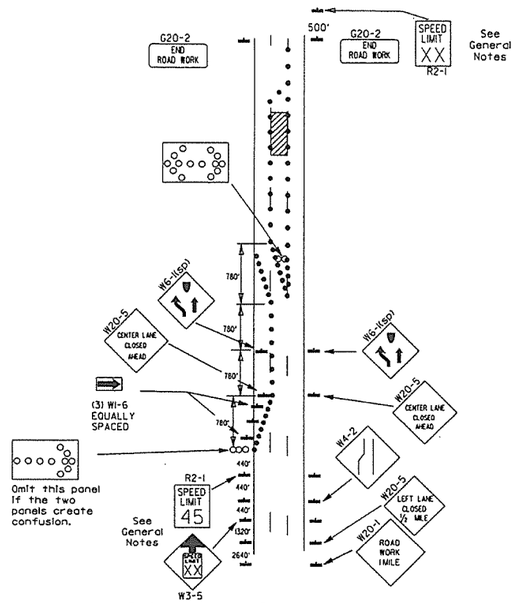
ARKANSAS STATE HIGHWAY COMMISSION

STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION

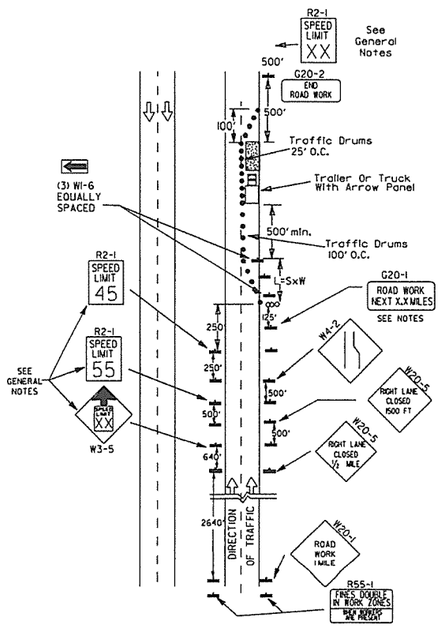
STANDARD DRAWING TC-2



(A) Typical application - daytime maintenance operations of short duration on a 4-lane divided roadway where half of the roadway is closed.



(B) Typical application - 3-lane oneway roadway where center lane is closed.



(C) Typical application - construction operations of intermediate to long term duration on a 4-lane divided roadway where half of the roadway is closed.

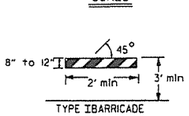
KEY:

- ○○○ Arrow Panel (If Required)
- ■ Channelizing Device
- ● Traffic drum

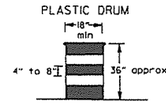
GENERAL NOTES:

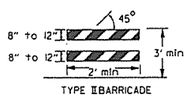
1. A speed limit reduction may be implemented ONLY when designated in the plan or when recommended by the Roadway Design Division.
2. When the existing speed limit is 55mph and the plans require a speed limit of 45mph, the R2-1(55) shall be omitted and the W3-5 shall be installed at that location. Additional R2-1 45mph speed limit signs shall be installed at a maximum of 1 mile intervals. At the end of the work area a R2-1(XX) shall be installed to match original speed limit.
3. When the existing speed limit is 65mph and the plans require a speed limit of 55mph, the R2-1(45) shall be omitted. Additional R2-1 55mph speed limit signs shall be installed at a maximum of 1 mile intervals. At the end of the work area a R2-1(XX) shall be installed to match original speed limit.
4. The maximum spacing between channelizing devices in a taper should be approximately equal in feet to the speed limit. Beyond the taper, maximum spacing shall be two times the speed limit or as directed by the Engineer.
5. Warning lights and/or flags may be mounted to signs or channelizing devices at night as needed.
6. Pavement markings no longer applicable which might create confusion in the minds of vehicle operators shall be removed or obliterated as soon as practicable.
7. The G20-1 sign will be required on jobs of over two miles in length. When the lane closure is not at the beginning of the project, the G20-1 sign shall be erected 125' in advance of the job limit. Additional W20-1 (1 MILE) signs are not required in advance of lane closures that begin inside the project limits.
8. Flaggers shall use STOP/SLOW paddles for controlling traffic through work zones. Flags may be used only for emergency situations.
9. All plastic drums and cones shall meet the requirements of NCHRP-350 or Manual For Assessing Safety Hardware (MASH).
10. Trailer mounted devices such as arrow panels and portable changeable message signs shall be delineated by affixing conspicuity material in a continuous line on the face of the trailer. When placed on or adjacent to the shoulder and not behind a positive barrier, these devices shall be delineated by placing five (5) traffic drums, equally spaced along the traffic side of the device.

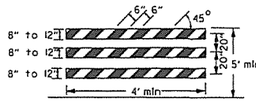
Channelizing devices



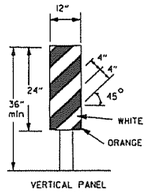
* When cones are used on freeways and multi-lane highways, they shall be 28" min. During hours of darkness, 28" cones shall be used on all roadways, and shall be reflectorized in accordance with the M.U.T.C.D.







NOTE:
For all road closures, the Type III barricades shall be of sufficient length to extend across entire roadway.

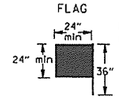


TRAFFIC CONTROL DEVICES FOR VERTICAL PAVEMENT DIFFERENTIALS

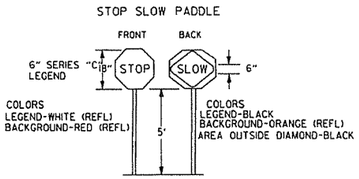
VERTICAL DIFFERENTIAL	LOCATIONS	TRAFFIC CONTROL
1" to 3"	Centerline, lane lines	W8-11
1" to 3"	Edge of shoulder	W8-9
Greater than 3"	Lane lines	Standard lane closure required
Greater than 3"	Edge of traveled lane	*RSP-1 and vertical panels, drums or concrete barrier
Greater than 3"	Edge of shoulder	*Vertical panels, drums or concrete barrier

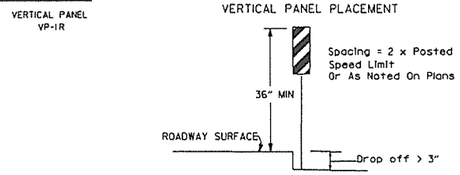
* When shown on the plans concrete barrier will be used.

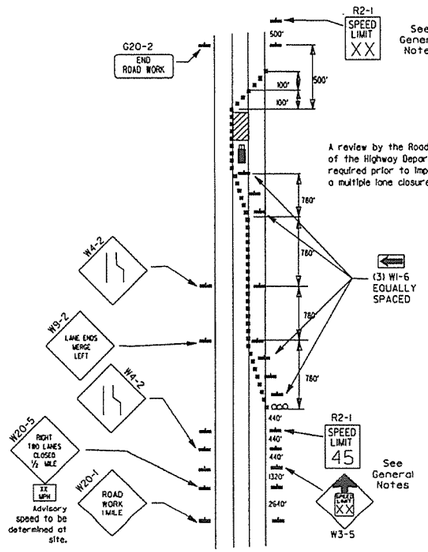
When the shoulder area is used as part of the traveled lane and there is insufficient width to place drums on the remaining shoulder width, then vertical panels shall be used.



Flag shall be of good grade red material







(D) Typical application - closing multiple lanes of a multilane highway.

DETAIL OF SPLICES

NOTES: USE SPLICES ONLY WHEN NECESSARY FOR INSTALLATION. TYPICAL INSTALLATION SHOULD HAVE NO SPLICES (SEE STD. DRAWING NO. SHS-2)

NORMAL INSTALLATIONS WILL REQUIRE 1/4" DIA. BOLTS TO MOUNT SIGNS TO POST AND 5/16" DIA. BOLTS TO ASSEMBLE THE VARIOUS POST SUPPORTS. EACH OF THESE BOLTS SHALL BE CARRIAGE BOLTS.

SIGN POSTS SHALL BE PAINTED GREEN; SIGNS SHALL NOT BE PAINTED, AND ALL SIGN POSTS SHALL BE PLUMB.
