December 1, 1948

To the Governor and Members of the 57th General Assembly  
State of Arkansas

We transmit herewith a Report of the Activities of the State Highway Commission covering the two year period ending June 30, 1948.

The purpose of the publication is to present a record of highway maintenance and construction activities, to give an accounting of expenditures made, to show the present physical status of the highway system, and to make an analysis and estimate of highway revenues, which when considered together, will provide some of the information needed for an understanding of the highway problems of the State and allow a correct appraisal of the Commission's responsibilities and accomplishments.

In order to more fully present existing conditions, the information regarding construction activities has been extended beyond June 30th.

Respectfully submitted,

*W.H. Sadler*  
Chairman, District 6

*R.E. Peace*  
Vice Chairman, District 7

*Dan Selton*  
Member, District 1

*E.C. Reber*  
Member, District 5

*Felix Pugh* *H.E. Van Dalesen*  
Member, District 2 Member, District 8

*Emmett Williams* *B.B. Brogdon*  
Member, District 3 Member, District 9

*G.T. Cragar*  
Member, District 4

*D.F. Portis*  
Member, District 10

Highways Are Indispensable to Agriculture, Industry and Commerce

 \*\* L. P. Mann, February 1945—February 1947, Resigned

## FOREWORD

The nationwide economic uncertainty and industrial unrest, with constantly spiralling prices, during the past biennium, has had direct and serious effects on the Highway Department's program. Since 1940, cost records of the Department reflect a steady year by year increase. This is vividly revealed in a comparison of weighted average costs to construct a mile of road. In 1947 it cost 2.39 times as much to construct a mile of road as it did in 1940. Similarly the cost per hour of labor in maintenance operations had risen to 2.25 times the 1940 level. This fact coupled with a scarcity of important construction materials has confronted highway officials with a perplexing twofold problem. They must in the face of these conditions (1) provide maintenance of such a character and extent as to preserve the State's investment in its highway system and (2) find the means to build additional mileage of improved roads in keeping with current progress.

The successful solution of these problems calls for the best talent the highway engineering profession can provide. Further, policies must be adopted in keeping with the State's physical and financial ability to maintain and construct. An intelligent co-operative attitude, free of selfish local interest or prejudice on the part of the highway users, will do much to insure the improvements to which their tax dollars entitle them.

## SECTION I

### SILVER ANNIVERSARY

The year 1948 marks the twenty-fifth anniversary of the Highway Department's operations on an official system of state highways. This quarter century has witnessed many changes in the theory and practice of highway building; changes that have been born of experience, as little by way of previous practice or precedent was available to guide the early road builder.

Pioneer trails or crudely constructed county roads which gave little evidence of planning formed most of Arkansas' highways twenty-five years ago. Natural barriers and the lack of improved roads had restricted travel to the point where rural life was largely communal. Since then the development of highway transportation facilities has changed the social and economic aspects of the state to a degree that beggars description. The insistent demands of a motorized world have caused rivers and lakes to be spanned with graceful, enduring bridges, the beautiful and remote fastnesses of the Ozark and Ouachita mountains to be penetrated, and the rich alluvial delta farms made accessible at all seasons of the year. These accomplishments, as in the case of all enduring progress, have been slow and often painful.

Then

Now

The first effort to put highway building on an organized basis came in 1913 when the Department was established as an adjunct to the State Land Office for the purpose of collecting information, preparing uniform plans and specifications and advising local officials on road improvement matters. All road construction was done by County Authorities or by local Road Improvement Districts. Local authorities decided where and how roads should be built and but little thought was given to a connected system. Each biennium numerous legislative acts were passed in an effort to satisfy conflicting demands but conditions and progress became progressively more unsatisfactory until on October 20, 1923, in response to indignant public demand, the legislature in extraordinary session finally enacted a comprehensive road law that placed highway construction and maintenance under the direct control of the Highway Commission, shifted a large part of the cost of highways from property owners to motor users, and established a connected State Highway System of 6,637 miles.

The growth and improvement of that system is strikingly illustrated by a comparison with conditions of today:

Mileage of State Highways		
1923		1948
327 Miles	Paved	4,339 Miles
1,813 Miles	Gravel	4,978 Miles
1,097 Miles	Graded	381 Miles
3,400 Miles	Unimproved or no existing road	57 Miles
6,637 Miles		9,755 Miles

A quarter century ago ferries were the only means of crossing many of our larger streams, and miles of road across river bottoms were passable only during the summer months. At that time there was not a highway bridge across the lower White River south of the Missouri line: today enduring bridges of steel and concrete span this picturesque river at Cotter, Batesville, Newport, Augusta, Des Arc, DeValls Bluff and Clarendon. In like manner the Ouachita River twenty-five years ago was not bridged south of Camden. During these years permanent, modern bridges and long causeways have been constructed at Camden, Calion and on Highway 82 between Strong and Crossett. Similarly no bridge was to be found across Red River south of the newly opened Index bridge. Permanent bridges have subsequently been built at Fulton and Garland City as links in two important interstate highways.

Old  
Ferry Using Current for Power

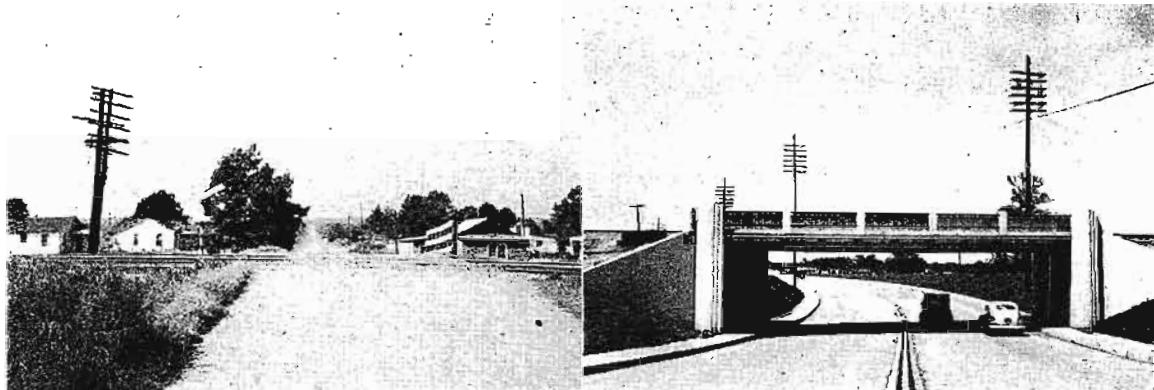

New  
Replaced with Steel and Concrete Decked Truss Bridge

The progress of the years has also witnessed the replacement of a long narrow wooden trestle leading from the levee to the Harahan bridge at Memphis with a paved roadway which in turn has become obsolete and will soon be rebuilt and widened to provide an adequate approach to the new four lane Mississippi River bridge.

Striking proof of the progress that has been attained is found in some comparisons of conditions that existed in 1923 and those in 1948. In 1923, 113,825 motor vehicles were registered and 45,819,000 gallons of gasoline were consumed. This year it is anticipated that over 400,000 vehicles will be registered with a total consumption of over 300,000,000 gallons of gasoline. A sharp contrast is also evident in the matter of revenues. In 1923, \$2,558,158 in highway revenue was collected while up to August 31 of 1948 over eighteen million dollars had been collected, and it is anticipated that revenues will reach an all time high of twenty-five and one half million dollars.

Thus from a meager beginning, when communities were separated by natural barriers and the lack of roads, when social and economic progress was correspondingly

Past  
Present  
Hazardous Grade Crossings Are Being Replaced with Safe Grade Separations

retarded, through a long series of change and difficulties, the Department has emerged to its present place of importance in State affairs. Today your highways more than any of the other means of transportation, serve the public need. They have reached into every nook and corner of the State and with an Aladdin touch made all of us neighbors. The average citizen has been furnished a magic carpet on which to move here or there at will. This enlarged freedom of movement has had a profound effect. With it has come greatly enlarged opportunities to improve public health, education, agriculture, commerce and industry.

So it is that the Highway Department, on this the Silver Anniversary of its founding, points with pride to the part that your highways have had in the State's growth and progress during the past quarter century.

## SECTION II

### SUMMARY AND REVIEW

#### **Administration**

**State Highway Commission:** The State Highway Commission is composed of ten members, one from each of the State Highway Maintenance Districts, who are appointed for two year terms by the Governor subject to confirmation by the Senate. Their terms of office are concurrent with that of the Governor. The Commission is vested with all powers and duties imposed by law for the administration of the State Highway Department, together with all necessary authority to enable it or any of its officers or employees to carry out fully and effectively the regulations and laws pertaining to State Highways.

**Director of Highways:** The Director of Highways is the Chief Executive Officer of the Department and is appointed by the Governor subject to the concurrence of the Senate. He has direct control and management of highway affairs subject only to the powers of the Commission.

**Acting Secretary and General Counsel:** The Acting Secretary and General Counsel serves as secretary to the State Highway Commission. He is responsible for the preparation and preservation of Commission records and serves as the Department's general counsel.

**Chief Engineer:** The Chief Engineer is appointed by the Director of Highways subject to the approval of the Commission. He is the chief technical officer of the Department and is responsible for all engineering activities.

#### **Department Divisions**

**Roadway Construction:** The Roadway Construction Division is directed by the Construction Engineer, who has the responsibility of supervising all roadway work constructed by contract.

**Roadway Surveys:** The activities of this Division are under the control of the Engineer of Surveys, who has the responsibility of making all field surveys for proposed roadway construction.

**Roadway Plans:** This Division is under the direction of the Engineer of Plans, who is charged with the responsibility for the design and preparation of roadway plans for all work undertaken by the Department on either contract or state force basis.

**Federal Aid Procedure:** The function of this division is that of coordination between the State Highway Department and the Public Roads Administration. All correspondence with the Public Roads Administration, contracts between the respective agencies, reimbursement vouchers and reports are handled through the Office Engineer of Federal Aid Procedure.

**Right-of-Way Division:** The Right-of-Way Division is under the direction of the Right-of-Way Engineer, who is responsible for the acquisition of all rights-of-way needed for construction on, or the operation of the State Highway System and for the preservation of related records.

**Bridge Division:** The Bridge Division is supervised by the Bridge Engineer. This division is responsible for all bridge surveys, design, plans, and supervision of construction. It is also responsible for heavy bridge maintenance which requires specialized knowledge or skill.

**Materials and Tests:** The work of this Division is supervised by the Engineer of Materials and Tests. The three principal classifications of work handled in this division are (1) preliminary field investigations to determine soil types and available road building materials, (2) laboratory tests of materials required on construction or maintenance operations, and (3) field inspection and testing during the construction period.

**Statistics and Analyses:** The function of this Division, which is administered by the Engineer of Statistics and Analyses, is to compile and analyse factual data regarding financial trends and records, inventory of the highway system, road life studies, traffic conditions and the preparation of appropriate graphs, maps, records, and reports.

**County Aid Division:** The Division of County Federal Aid Secondary roads is under the direction of the Engineer of County Federal Aid Secondary roads. This division cooperates with the County Judges in initiating County Federal Aid projects, in preparing and submitting programs to the Public Roads Administration for approval and construction, as authorized in the 1944 Federal Aid Act.

**Maintenance:** Maintenance operations are conducted through ten maintenance districts, each of which maintains its own office, shop, and requisite personnel. Each district is administered by a District Engineer, who is responsible for all maintenance activities within his respective district and who reports directly to the State Maintenance Engineer. This is the only division of the State Highway Department which carries on its functions through district offices. All other divisions are administered by the Central Office at Little Rock.

**Equipment:** The Equipment Division is under the control of the Equipment Supervisor and is charged with the responsibility of servicing and repair of some 2,276 pieces of equipment required in the Department's operations.

**Purchasing:** The Purchasing Division is under the control of the Purchasing Agent. This division provides centralized control for the procurement of all supplies and equipment. Purchasing is done on either bid, negotiated, or comparative quotation basis as will best serve the interest of the State. All purchases in excess of \$1,000 require Commission approval.

**Accounting:** The Accounting Division is supervised by the Chief Accountant, who is charged with the responsibility for the control and proper recording of the department's receipts and disbursements.

## REVIEW OF CONDITIONS

Construction costs are at this time the highest in the history of the Department and each rise in the wage rates of industry and in transportation costs is in turn reflected in increased costs to the Highway Department. Maintenance costs are similarly high and continue to increase with each rise in the costs of materials and equipment. Contractors are experiencing much difficulty and delay in obtaining materials which in turn has caused many jobs to lag with accompanying hardship to the general public. The Commission is fully aware of these unfavorable conditions and asks the people of Arkansas to bear with it until conditions are again normal.

The 1947-1948 winter season, according to the United States Weather Service, was the most severe since 1905. Alternate freezing and thawing during this period virtually destroyed many miles of graveled roads which had become unavoidably thin because of the lack of adequate maintenance funds. The cost of regraveling this large mileage at this time is not only prohibitive but beyond the capacity of the Department. A concerted effort is being made to grade and spot gravel the most unstable sections in order to maintain uninterrupted traffic over these roads during the coming winter season. It is also considered important to point out that many of the State's trunk-line highways are of necessity being extended beyond their economic life because of the Highway Department's inability to finance suitable replacements. As a result, the drain for maintenance to keep these roads in usable condition is extremely heavy. This in turn has resulted in inadequate maintenance on many of the less important roads.

Under current financing authority the Department is unable to replace depreciation or offset obsolescence losses and unless corrective measures to this end are adopted, it is inevitable that the State will eventually suffer a breakdown of the motor transportation system.

At the present time the motor user pays the entire highway bill, even though the general public and adjacent property owner is in large measure benefitted. So long as this condition continues it is the obligation of the Highway Department, so far as finances will permit, to provide adequate facilities in line with traffic needs and to subsidize low traffic roads only to the extent that funds are available, giving first consideration to those roads which are of distinct value in the economic and social progress of the State. It is axiomatic in the buying of roads, as is the case in the purchase of any commodity, that values are in direct proportion to the amount spent. Cheap initial costs mean that maintenance must be correspondingly started at an earlier date and that the costs will in like manner be much heavier. Much enthusiasm has been shown in the matter of building a large mileage of low type roads, but we should beware of building a system of inadequate, obsolete, low strength highways which invariably require high maintenance expenditures.

The Department during the biennium has experienced a critical shortage of trained men. It has, as a result, been compelled to assign too much work to construction personnel and in some cases extend them beyond their capabilities. In some instances this has resulted in work that has not been up to the desired degree of perfection. Many of the states report a similar condition and further, that they are unable to train men for Division Heads or Staff Member replacements. The American Association of State Highway Officials, Associated General Contractors, The American Society of Civil Engineers, and the American Road Builders Association, have all become interested in this problem and have made surveys to determine how best to encourage young men with proper academic training to enter the highway field as a career. The administration of multi-million dollar expenditures, the design of expensive structures, the making of physical and chemical tests on road and bridge materials, together with the design of well balanced economical highways, call for the highest type of trained technical personnel obtainable. With the average state incurring difficulty in this particular, Arkansas is experiencing even greater trouble because the salary rates paid in this State are among the lowest in the nation. It, accordingly, behooves the State to make the highway field more attractive by way of remuneration, stability and advancement in employment and the establishment of retirement benefits. This is conclusively borne out by many interviews with recent engineering graduates who have been attracted to industry or service in the Federal Government as being much more desirable fields of employment. In like manner, our studies lead us to the conclusion that social security benefits should be provided for all employees who are paid on an hourly basis.

It is the Commission's considered opinion that remedial legislation should be considered by the forthcoming session of the General Assembly as a means of correcting the conditions herein pointed out.

#### ACCOMPLISHMENTS

The accomplishments of the Department during the biennium are outlined in detail in Section IV, Operations. However, the following achievements are considered as being worthy of special mention.

1. Construction contracts in excess of \$17,000,000 have been awarded. While this reflects a marked increase over the volume of work possible during the period of war time controls, it is, nevertheless, highly desirable that these operations be accelerated and carried on at a much higher level during the ensuing biennium.

2. The Department has conducted a vigorous maintenance program in an effort to offset the unavoidable neglect and wear of the war period. This work has included the shaping and stabilizing of shoulders, mudjacking, sealing, center striping, which in case of the high traffic roads has been of the reflectorized type, spot graveling and road markers. This program was seriously disrupted as a result of the storm damage during the late winter of 1948, which caused an unprecedented drain on the maintenance funds.

3. Advanced engineering studies have been launched for the development of future high type improvements for the heavily traveled arterial routes and for the relief of congestion in major urban centers. Comprehensive traffic studies have been completed in the Pine Bluff and Greater Little Rock areas and in Crittenden County, as the basis for the rational planning of future projects.

4. Roadway design standards have been revised and modernized so as to provide improvements commensurate with traffic needs and are sufficiently elastic to be adaptable to the state's varying topography with appropriate regard for the economy of construction.

5. A comprehensive construction program on the Federal Aid Secondary County roads has been conducted with material benefit to the counties.

6. During the biennium permanent district headquarters and shop buildings have been constructed at Camden and Russellville. All ten of the Maintenance Districts are now supplied with modern, adequate, facilities.

7. The records building at Little Rock has been enlarged to provide office space for IBM equipment which is being used for the more rapid and simplified analysing and tabulating of engineering and accounting data.

8. Considerable research has been done incident to the development of an equipment rental schedule. This plan contemplates a charge for the use of all equipment whether on maintenance or construction operations and the setting aside of the accrued rentals in a reserve fund for the repair or replacement of equipment as needed. This action is necessary in order that the State may fulfill its part of a cooperative agreement with the Public Roads Administration for a state wide road life study as a part of the Planning Survey. It is also considered as being highly important from the standpoint of inventory control and cost accounting within the Department.

9. The Department has continued to cooperate with the Tennessee Department of Highways and Public Works and the Public Roads Administration in the construction of a \$14,500,000 bridge across the Mississippi river at Memphis. During the biennium contracts have been let which will provide for the completion of the major bridge structure. Arkansas funds allotted for this project amount to \$406,500.

#### STATUS OF THE STATE HIGHWAY SYSTEM

During the biennium a lessening of war time controls and improved supply of construction materials permitted the commission to let 126 contracts for road and bridge construction totaling \$17,171,924. Details of these awards will be found in Table 20 of the Appendix.

The following tabulation shows comparatively the mileage by types according to the Seventeenth Biennial Report, work completed to June 30, 1948 and mileage that will exist upon completion of active contracts.

Type	Previous Report Miles	June 30, 1948 Miles	Upon Completion Miles
Concrete and Brick Pavement-----	1,370	1,354	1,354
Asphaltic Pavement -----	513	528	552
Bituminous Surfacing -----	1,907	2,123	2,433
Untreated Gravel -----	5,488	5,312	4,978
Graded and Drained -----	414	381	381
Unimproved -----	61	57	57
Total -----	9,753	9,755	9,755

The system includes 89 miles of bridge structures which are more than 20 feet in length.

These totals indicate that the previously adopted policy of this Commission of not adding additional mileage to the system until the existing mileage has been improved, has been carried out. It is recommended that this principle be adopted as a continuing policy, and further, that the Highway Commission be empowered to remove roads from the State Highway system upon proper determination of their lack of value or importance. Attention is invited to the fact that under existing laws the State Highway Commission may add roads to the system but cannot remove them. Throughout the years many miles of road have been added to the system which cannot be justified in terms of either service or revenue. This has resulted in an unhealthy condition in that the revenue producing roads are compelled to provide for the upkeep of these roads which are not now, and cannot in the foreseeable future, become either self-sustaining or important as connecting or feeder roads. It is the considered opinion of this Commission that the present state highway system should be carefully analysed and revised so as to properly serve all arterial interstate routes, connect major centers of population, industrial communities, land use areas, and county seats. Stub roads, tertiary land service roads and minor loop roads should be eliminated.

It is realized that such a move would provoke opposition from local interest groups. It is none the less desirable and recommended as a means of balancing the State Highway system in line with traffic needs. It is accordingly recommended that the existing laws be amended so as to empower the Highway Commission to remove roads from the system when it is apparent that by so doing the best interests of the public will be served.

#### THE FEDERAL AID SYSTEM

Under the provisions of the Federal Aid Act of 1944 the Federal Aid System as of January 1, 1948 includes the following mileage:

Federal Aid Primary System-----	3,486 Miles
Federal Aid Secondary System—State Roads -----	6,055 Miles
Total on State System-----	9,541 Miles
Federal Aid Secondary System—County Roads-----	6,607 Miles
Total on Federal Aid System-----	16,148 Miles

Thus it is readily seen that 9,541 miles of the Federal Aid System are on state roads. The remaining 6,607 miles are on approved county roads and are subject to improvement through the offices of the respective counties.

The geographical location of the roads which go to make up the Federal Aid Primary and Secondary Systems will be found on Plate 6 in the back of this report. The approved mileage of Federal Aid Primary and Secondary roads which form a part of the State Highway System in each county will be found in Table 21.

### SECTION III

## HIGHWAY FINANCE

### THE FINANCIAL PICTURE

The accumulated construction capital evaluation of the State Highway System from 1917 to date amounts to approximately \$294,000,000 of which \$78,000,000 has been in the form of Federal Aid grants and \$216,000,000 in State and Improvement District funds, but the people of Arkansas by 1972 will have paid a total of approximately \$417,000,000 for their capital investment in the existing system because much of the State and District construction was financed through bond issues. In other words, the motor user is paying \$1.81 for each \$1.00 of highways provided for his use through the expenditure of State and District funds.

In the past the ultra-conservative estimate of \$6,000,000 has been used as the annual depreciation and obsolescence charge. This figure was based on construction costs which were much below those of today. It is accordingly the Commission's opinion that this charge is probably more nearly \$8,000,000 to \$10,000,000 a year. No figures are available to show the part of the accumulated capital evaluation, not considering depreciation or obsolescence that is still in service, but it is probably about \$220,000,000. For the same reason no exact annual charge for depreciation and obsolescence can be determined. Much of the highway system was constructed from 1927 to 1933. Because of the extremely heavy traffic which the trunk lines carry, as well as their age, many miles of these important roads are showing considerable distress and must of necessity be reconstructed in the near future. However, the debt service requirements incident to the building of these roads will be continued until 1972 and many of the roads that are being constructed at this time to replace existing roads will, in all probability, require replacement by the time the State discharges its present contract with the bond holders. For that reason, debt service payments should not be considered as highway financing at the present time.

During the biennium the Refunding Act of 1941 was amended through the passage of Act 100 of 1947. This act provided for an additional \$5,000,000 for the Highway Construction Fund and an additional \$2,000,000 to the County Aid Fund after the allocations set out in the Refunding Act of 1941 have been satisfied. With this \$2,000,000 to augment the previously authorized turnback, the counties received twenty-five percent of the highway income during the 1947-1948 Bond Year, after collections and debt service requirements had been deducted, and in turn the county highway system accommodated approximately fifteen percent of the total vehicular traffic in the State. The 1941 Refunding Act provided the State with construction funds for the first time during the 1941-1942 Bond Year. During the 1947-1948 Bond Year the net income to the State Highway Department for construction and maintenance showed an increase of fifty percent above the 1941-1942 level and was the highest in the history of the Department. However, this increase was offset by operating costs of the Department which had increased ninety-seven percent. This fact is brought out to show that while the Department's income is at an all time high, it has not kept pace with increased operating costs.

Attention is also called to the fact that the gasoline tax rate is still the same as it was at the beginning of the biennium. Due to increased production costs the oil companies have made a gradual increase up to five cents in the sale price of gasoline. This has cost the motor user an additional \$16,786,000 during the past two years. It is significant to note that a one cent gasoline tax yields approximately \$3,000,000. During the 1947-1948 Bond Year \$24,133,000 in highway income was collected. Of this amount the Department received \$11,421,000 for construction and maintenance, or approximately forty-seven percent. Basing income on the six and one-half cent gasoline tax it is apparent that your Highway Department operated on the basis of a three cent gasoline tax.

In order to protect the State's investment in highways and realize their maximum life, adequate maintenance funds should have first call on income before additional construction is undertaken. However, public demand for new roads has not always per-

mitted this to be done and Arkansas as a result is maintaining its roads on seventy-five percent of the national average.

Arkansas received approximately \$7,500,000 in Federal Aid grants for each of the fiscal years 1947 and 1948, of which \$1,000,000 annually was given to the counties for the County Federal Aid program. These grants were authorized under the Federal Aid Highway Act of 1944. No grant was provided for the 1949 fiscal year and the Highway Act of 1948 provided approximately \$6,700,000 annually for the 1950-1951 fiscal years, from which will be deducted the amounts allocated to the counties for Federal Aid construction work. Since the Federal Aid grants are not uniform, or of a continuing nature, comprehensive planning for the future is made difficult. However, if the States can find the means to improve their highway financial position, it is reasonable to assume that Federal Aid grants will keep pace with correspondingly enlarged benefits.

Arkansas has not had a road life study program in the past and does not know at what rates the roads are wearing out or need replacement due to obsolescence. However, based on national averages, it can reasonably be expected to lose within the next ten years thirty-seven percent of the high type pavement, sixty-one percent of the black-top roads and eighty-nine percent of the gravel and crushed stone surfacing. To replace these losses, under current standards and at present prices, would require \$15,000,000 annually. Against this need, the financing during the biennium, including Federal Aid, has provided an \$8,000,000 to \$10,000,000, annual program. Arkansas is not unlike the other states in its inability to replace depreciation and obsolescence. Mr. Thomas H. McDonald, Commissioner of the Public Roads Administration in testifying before the sub-committee on Roads of the Committee of Public Works in the House of Representatives and narrating the national picture, stated, "Our highways are wearing out—unfortunately there are no permanent highways and the rate of depreciation and obsolescence is greater than our present rate of replacement" ..... "for fifteen years we have been lagging in the construction of adequate highways." Mr. McDonald further stated that from the experience of thirty-five states we have determined that at the rate pavements are wearing out the nation will lose forty-two percent of the high type pavements in ten years.

Contrary to public opinion in some quarters, roads are not permanent, and in order to have an adequate system of highways there must be a continuing construction program to replace depreciation and obsolescence losses. A desirable and modernized system of highways commensurate with present and potential traffic needs would cost approximately \$460,000,000 in capital investment, according to the Department's estimates. This is practically the same as the estimate compiled by the American Association of State Highway Officials in connection with the hearings held prior to the passage of the 1948 Federal Aid Highway Act. Based on the national average of road type life expectancy, a continuing annual construction program of \$18,000,000 will be required to construct and perpetuate the system. In the paving of low traffic roads it is well for the public to bear in mind the relatively low earning capacity of these roads and how far the Department can go in subsidizing them at the expense of the trunk line roads which produce the bulk of the revenue.

Highway users of all types contribute slightly less than three-tenths of one cent per mile for the building and upkeep of the highways. In other words, they travel thirty-five miles by the time they contribute a dime toward the operation of the Highway Department. By multiplying the daily average traffic by three-tenths of a cent the amount that a given road is earning for construction and upkeep can be very readily determined. With the average annual highway ownership cost ranging from \$2.50 to \$6.50 per day per mile and with maintenance costs varying from \$1.50 to \$2.00 per day per mile, it can very readily be shown to what extent the low traffic roads are subsidized. There is a limit, however, as to how much traffic will increase with the improvement of a road. In order to have traffic increases, there must be generating potentials, such as urban centers, industrial localities, extensive land use areas, and through traffic.

The foregoing review is given in order that the public may become acquainted with the financial requirements if a modernized system of highways is to be constructed and suitably maintained and in order that highway wants can be adjusted in line with the desire or ability to finance.

BOND (APRIL-MARCH) YEARS

PLATE I

## DISTRIBUTION OF HIGHWAY REVENUE

Governing legislation provides that income for highway purposes be derived from motor vehicle license fees and fuel taxes. These revenues are distributed as follows:

1. **Gross Revenues:** All collections are made by the Revenue Department and are deposited in the State Treasury to the credit of the State Apportionment Fund.

2. **Charges:** Handling or collection costs have first priority. The Stabilization Law, Act 311 of 1945, provides that all previous charges be consolidated and deducted in a lump sum from the State Apportionment Fund.

Cost of Collection	This charge during the past three bond years averaged 2.52 percent of the gross collections.
--------------------	--

3. **County Highway Fund:** Turnback to the County Highway Fund has second priority and is derived as follows:

A. 7.7 percent of the net fuel tax

B. Net revenue from  $\frac{1}{4}$ c on each gallon of motor fuel taxed.

This allocation varies from year to year, but averaged 8.70 percent of the gross collections for the past three bond years.
---

THE REMAINING 88 $\frac{3}{4}$  CENTS OF EACH DOLLAR COLLECTED IS AVAILABLE TO MEET STATE HIGHWAY FUND ALLOCATIONS. PLATE I SHOWS BY HEAVY HORIZONTAL DASHED LINES THE AMOUNTS REQUIRED TO FUND OR CAPITALIZE EACH ACCOUNT. THE VERTICAL BARS SHOW THE GROSS INCOME BY YEARS. FROM THE FOREGOING IT IS APPARENT THAT \$1.12 $\frac{1}{2}$  MUST BE COLLECTED TO PROVIDE \$1.00 FOR HIGHWAY PURPOSES.

Gross income required to satisfy net allocations:

All Allocations:      Net \$20,500,000	Gross \$23,193,000
--	--------------------

4. **State Highway Fund:** After the above priorities have been satisfied, the balance is allotted from the State Apportionment Fund in accordance with the provisions of the Refunding Law, Act 4 of 1941 as amended by Act 100 of 1947.

### Allocations

A. Debt Service .....	\$7,175,000	
Highway Maintenance .....	3,075,000	\$10,250,000
B. Highway Construction and Maintenance .....	2,500,000	
C. Aid to Improvement Districts and Cities .....	750,000	
D. Highway Construction and Maintenance .....	5,000,000	
E. County Aid Fund .....	2,000,000	
F. Construction, Maintenance or Debt Service .....	\$20,500,000	Surplus

### FISCAL OPERATIONS

**Fund Balances:** The prosperity of the nation and the industrial growth of the State are reflected in the figures showing the large motor vehicle registration, increasing traffic, and augmented income. State Highway Bonds have continued to be considered as an excellent investment. Contracts for road and bridge construction totaling approximately \$17,171,925 have been awarded during the biennium, using the balances carried over plus current funds.

The following cash balances are shown by Table 8-B as of June 30, 1948:

Debt Service Reserve Fund (Cash) .....	\$ 929,411
Highway Construction Fund .....	3,833,314

It should be noted that \$3,196,015 of the Construction Fund Balance was obligated by contracts for work in progress.

The Debt Service Reserve fund represents a contingent reserve established under the 1941 Refunding law, to be used only in the event current revenues are insufficient to meet the annual debt service requirements. That portion of the balance invested in U. S. Bonds, which amounts to \$5,126,200 is not included in the financial tables.

The Highway Construction Fund is derived from the regular allocation of \$2,500,000 from the 1941 Refunding Law plus any additional appropriations made from the Surplus Fund. During the biennium the appropriations under Act 228 of 1945 and Act 176 of 1947 totaled \$11,500,000.

The Highway Fund carries any unapportioned surplus over and above the specified allocations set out in Act 4 of 1941 and Act 100 of 1947.

TABLE I

RECEIPTS AND DISBURSEMENTS OF THE STATE HIGHWAY DEPARTMENT

July 1, 1946 Through June 30, 1948

Total accounted for -----			\$32,206,860.46

**Financial Statements:** Table 1 is a condensed statement of the biennial receipts and disbursements of the Highway Department for all purposes from State funds. This table takes no account of the motor user revenues allocated and expended for (1) debt service, (2) aids and grants, or (3) miscellaneous expenditures; such information will be found in Tables 3 and 4. During the two year period the sum of \$27,532,361.35 was expended from State funds for all activities of the Department. The balance of \$3,970,149.77 represents the balances in the Maintenance and Construction Funds.

Table 2 is a condensed statement which accounts for all motor user revenues, miscellaneous income, and Federal Aids for the biennium. This tabulation includes the receipts and disbursements shown in Table 1 and all other expenditures made for highway purposes. The balance of \$10,622,169.44 is available for highway purposes but only \$3,970,149.77 was available for construction and maintenance as of that date, and \$3,196,015 of this amount was encumbered by contracts as of September 1, 1948.

**Analysis of Highway Income:** Table 3 shows the revenue for highway purposes derived from each of the various sources for each year of the biennium. A detailed tabulation of the income by months is included in Table 10 of the appendix.

<sup>1</sup> Includes \$500,000.00 Advanced to Revolving Fund.

Item 1, indicates the gross amount collected each fiscal year from the 6½ cent per gallon tax levied on motor vehicle fuel. The amount shown represents the total received by the State Treasurer from this source and deposited in the State Apportionment Fund.

Item 2, Auto License Fees, shows the gross amount collected for the registration of all classes of motor vehicles and trailers.

Item 3, Auto Division Fees, represents the gross income derived from chauffeurs' licenses, transfers of title, duplication of lost license plates, duplicate registration cards and penalties.

Item 4, Drivers' License Fees, indicates the gross receipts from the sale of auto operators' licenses. The income is credited to the General Revenues Fund for the support of the State Police.

Item 5, Auto Intratransit Fees, represents the gross revenue derived from permits issued for motor vehicles passing over State highways in the course of delivery from manufacturer to dealer, or from dealer to dealer. This income is credited to the Bridge Bond Retirement fund.

Item 6, Oil Inspection Fees, shows the gross amount collected for the inspection of petroleum products. This income is credited to the General Revenues Fund from which \$100,000 is paid to the County Aid Fund to be used in the maintenance of Farm to Market Roads.

Item 7, Miscellaneous Receipts, includes such items as sales, motor carrier permits, testing charges and delinquent taxes from road and bridge improvement districts.

Item 8, Interest and Investments, represents the interest from Highway Debt Service Reserve fund invested in U. S. Government and State bonds.

Item 9, Sale of Securities. The Bond Refunding Board from time to time, sells securities held as investment in order to reinvest the funds to better advantage; this is non-revenue income.

Items 10 and 11, represent the cash receipts remitted to the State Treasurer on reimbursement vouchers submitted for payment by the Department on various types of Federal funds under agreement, together with any monies classed as revolving or trust funds. Each receipt is credited to the proper paying account for disbursement by the Highway Department.

**Analysis of Disbursements:** During the period covered by this report, expenditures for highway purposes from State and Federal funds totaled \$64,954,936.99; this figure excludes disbursements made for investment purposes from the Highway Debt Service Reserve Fund. Expenditures under the term "highway purposes" include the seven general headings set out in Table 4 which is prepared to show the disposition of all motor user imposts. The expenditure from State Funds amounted to \$53,950,473.51 and of this amount \$27,532,361.35, or fifty-one percent, was disbursed by the Highway Department. Debt service on highway bonds required 26.6 percent of the total State Funds spent. Local government units including counties, cities, and improvement districts received payments amounting to 18.1 percent and the remainder of 4.3 percent was expended for collection, State Police, and other miscellaneous allotments. The following analysis is given for each of the main headings of Table 4, and detailed tabulations of the disbursements are included in the appendix.

	<sup>1</sup> Includes Payment of \$100,000. Advances Made on Projects.			

Item I, Collection and Handling Charges: Since the passage of the Revenue Stabilization Act a pro rata share has been deducted from all taxes collected and used for general governmental expense. Collection costs and handling charges for the past three bond years have averaged 2.52 percent of the gross collections. However, Act 114 of 1947, which amends the Revenue Stabilization Act, now provides for a flat charge of 3 percent of the gross collected for collection service.

Item II, Miscellaneous: Drivers License fees were increased to \$1.00 during the 1947 session of the Legislature and are committed for the support of the State Police, but this income had always proved insufficient. Under the Revenue Stabilization Law, the State Police Fund is derived from the General Revenue Fund, to which the Drivers License Fees and Oil Inspection Fees are now credited. The amount of Oil Inspection Fees credited to the General Revenues Fund is the net collection less the \$100,000 paid to counties shown under Item IV 1.c. of Table 4.

Item III, Debt Service Operations: This shows the amount expended for principal, interest and handling charges on the State Highway bonded indebtedness. During the biennium the principal was reduced \$6,443,000 by retirement of bonds.

Item IV, Aids and Grants to Local Governments: Motor user revenues returned to local governments include the county turnback of 7.7 percent,  $\frac{1}{4}$  cent per gallon of motor fuel taxed, \$2,000,000 as provided for in Act 100 of 1947 and, under Act 311 of 1945, a \$100,000 grant from the General Revenues Fund in lieu of oil inspection fees. Other local units receive \$750,000 per year under the provisions of Act 4 of 1941 as amended, but during the war years the decline in revenues exhausted the reserve in this account and it became necessary to borrow from the Highway Construction Fund in order to meet obligations which matured prior to the allotment of funds to the Local Bond and Interest Fund. The aids and grants paid to each county are shown in Tables 11-A and 11-B of the Appendix, and are summarized as follows:

Counties.....	\$8,212,089.29
Municipalities.....	802,888.70
Bridge Districts.....	434,710.62
Road Districts.....	354,450.73
 Total.....	 \$9,804,139.34

At the close of business June 30, 1948, the Local Bond and Interest Fund owed the Highway Construction Fund \$195,585.71.

Item V, Highway Department Appropriations: Funds appropriated for construction during the biennium were made available under Acts 174 and 228 of 1945 and Acts 31 and 54 of 1947 in the total amount of \$9,294,140 for the 1947 fiscal year. Acts 176 and 288 of 1947 appropriated a total of \$10,000,000 for the 1948 fiscal year, or a total of \$19,294,140 for the biennium. A detailed analysis of expenditures by projects is set out in Table 15 of the Appendix which is summarized in Item V, 1.a. through e. of Table 4. Under Act 4 of 1941, as amended, a portion of the Highway Construction fund is allotted for maintenance purposes as a supplement to the regular maintenance found. Actual cash expenditures for construction during the biennium amounted to \$17,071,402.92. Funds were appropriated for maintenance for the 1947 fiscal year under Acts 204 and 174 of 1945 and Act 43 of 1947 in the total amount of \$5,112,500 and for the 1948 fiscal year under Acts 288 and 289 of 1947 in the amount of \$4,575,000, or a total for the biennium of \$9,687,500. Actual cash expenditures amounted to \$10,460,958.43. The differences between the amounts appropriated and expended were covered by transfers as approved by the Fiscal Control Board. Maintenance expenditures are summarized in Table 4, Item V, 2.a. through f. and a detail of expenditures by route and section is shown in Table 12.

Item VI, Investments: This includes the fiscal transactions of the Debt Service Reserve Fund established as a contingent reserve for debt service under the provisions of Act 99 of 1941. The Board of Fiscal Control created by Act 311 of 1945, is authorized to invest monies held in the reserve fund in State Highway Bonds or in U. S. Government Bonds. As bonds retire or are sold, the proceeds are reinvested. The figures shown indicate the disbursements made for investment purposes during the past two years. As of June 30, 1948, the par value of bonds held in this account was \$5,126,200.

Item VII, Federal Funds: All monies received from the Federal Government for road purposes were administered through one of four accounts, and the expenditure from each account is shown under this item. Table 16 in the Appendix indicates the Federal funds spent on individual projects during each fiscal year.

**State Highway Debt:** At the end of the fiscal year, June 30, 1948, the State Highway bonded indebtedness stood at \$118,175,000. Future interest requirements amount to \$52,234,910. The annual debt service requirements are shown by Table 19 in the Appendix. A complete analysis of the highway debt service operations is contained in the biennial report prepared by the State Comptroller and only a brief resume is included in this publication.

### THE 1944 AND 1948 FEDERAL AID ACTS

The 1944 Federal Aid Act allotted to Arkansas Federal Aid Funds for the fiscal years ending June 30, 1946, 1947 and 1948 the sum of \$22,406,871. These funds now referred to as Postwar Federal Aid were apportioned for use as follows:

1. Projects on the Primary Federal Aid System, rural and urban . . . . .	\$11,495,715
2. Projects on the Secondary Federal Aid System including extensions of the system in towns of less than 5,000 population. Funds were allocated to County roads during the first year of availability in the amount of \$1,000,000 for each of three fiscal years. On the basis of projects submitted the final allocation was:	
State Highways . . . . .	7,062,806
County Roads . . . . .	2,188,000
3. Projects on the Primary Federal Aid System in municipalities having a population of 5,000 or more . . . . .	1,660,350
Total . . . . .	\$22,406,871

At the beginning of the biennium on July 1, 1946, contracts had been awarded and agreements signed obligating \$3,175,485 of the Postwar Federal Aid Funds. As of June 30, 1948, the close of the present biennial period, the Federal Funds under obligation by contract had increased to \$14,243,638 for a total commitment during the two years of \$11,068,148. The total Postwar program under contract included 233 Federal Aid projects for a total estimated cost of Federal, State and County funds of \$27,221,678. The balance unobligated on which contracts may be awarded was \$8,162,238 in Federal funds as of June 30, 1948. Legislation was enacted by Congress during June, 1948, extending the availability of the 1947 fiscal year funds to June 30, 1950, and the 1948 funds to June 30, 1951.

At the close of the fiscal year practically all Prewar Federal Aid funds were under contract or in the program and plans stage; only \$56,024 of these old funds were unobligated and a majority of this sum will be required to absorb overruns on projects under construction.

Public Law 834 of the 80th Congress, approved June 29, 1948, and cited as the Federal Aid Act of 1948 will provide an allocation of approximately \$6,707,000 to Arkansas for each of the fiscal years ending June 30, 1950 and June 30, 1951. The 1950 funds will be available for contract on July 1, 1949. The appropriations under this act are distributed in the same ratios between Federal Aid Systems as set forth in the 1944 Act: 45 percent Primary; 30 percent Secondary; and 25 percent Urban.

## SECTION IV OPERATIONS

### ROADWAY DESIGN

**Surveys:** The work of the Division of Surveys while less spectacular than some of the other of the Department's operations is none the less of major importance. The thoroughness and accuracy with which its work is done is reflected in the initial construction cost as well as the continuing maintenance cost, and the cost per mile of vehicle operation. This necessitates the employment of personnel who have a keen appreciation and knowledge of these factors in order that the economics of highway location may be properly observed. This Division as now organized is capable of expansion to any degree necessary to provide complete survey service for future road programs.

Preliminary Location by Photogrammetric Method

Advanced methods are being employed through the Photogrammetric Section of this Division. Through the use of aerial photographs and mosaic maps, complete reconnaissance is made of a given area and all possibilities of routes between control points explored prior to the time the survey parties enter the field for ground work. This service is of particular value in the mountainous areas and in highly developed sections of the State. These methods have resulted in speedier, better, and less expensive location surveys than have been possible under the methods previously employed.

The Division of Surveys during the past biennium has completed surveys and submitted to the Plans Division complete data covering 108 projects with an aggregate length of 532.43 miles. The following is a summary of the work accomplished:

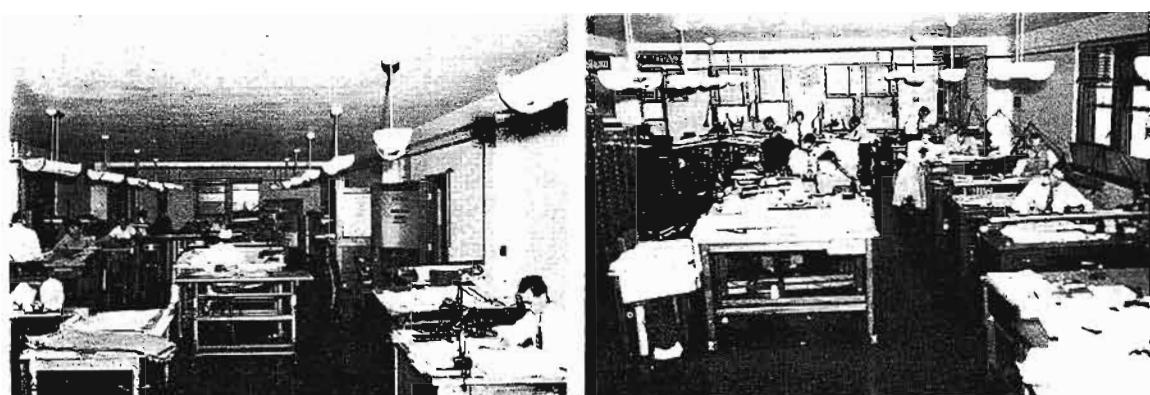

Number	Class	Miles
21	Primary Federal Aid State Routes	92.06
39	Secondary Federal Aid State Routes	313.00
14	Secondary Federal Aid County Routes	94.70
13	Urban Routes and By-Passes	24.42
21	Surveys for Signals at Grade Crossings	8.25
Total		532.43

These surveys have been made at an average cost of \$192.00 per mile or approximately one-half of what they would have cost by the methods used prior to the adoption of aerial photographic method of locating.

Field techniques and the preparation of standardized forms for note keeping and reporting have been greatly facilitated and improved through the adoption and use of a "Field Manual for Survey Parties" which was first published in June, 1945, and revised in March, 1948.

**Plans:** The personnel of this Division consists of a Principal Engineer, Chief Draftsman, and three squads of six to ten draftsmen each. Each squad is under the direction of a Principal Draftsman. The number of men composing a squad varies with the amount of work to be done.

The work performed by this Division consists of the preparation of plans, specifications and estimates for grading, minor drainage structures and surfacing. During the biennium, plans for County Secondary Federal Aid projects have been prepared, the counties paying the actual cost of such work. The following tabulation shows the amount of work done.

Roadway Design Section

#### Mileage of Plans by Project Classification

Classification	Plans Complete Miles	Plans Underway Miles
Primary Federal Aid Projects.....	241.4	70.4
Secondary Federal Aid (State) Projects .....	345.5	163.1
Secondary Federal Aid (County) Projects .....	159.9	12.0
State Projects .. .. .. .. ..	134.3	19.7
Total .. .. .. .. ..	881.1	265.2

The density, speed and weights of vehicles in present day traffic coupled with financial limitations demand a high order of skill in the design of modern highways. This requires the ability to obtain a proper balance in the geometrical and structural design features of a road so as to take full advantage of all conditions of terrain, as well as materials of construction, since these elements are reflected in the initial cost of construction, subsequent maintenance expense, and the cost per mile of vehicle operation. The American Association of State Highway Officials in cooperation with the Public Roads Administration have formulated national policies for highway design which are intended to provide the maximum of highway service with a minimum capital outlay. These policies are based on years of experience and research and have been adopted by various states as the basis for their design. With modifications necessary to meet conditions peculiar to this State, these policies have been adopted by the Arkansas State Highway Department for the design of future improvements, and are intended to provide facilities commensurate with traffic needs.

The principal requirements for two-lane rural highways are given in the following tabulation. Highways serving an average daily traffic of more than 4,000 vehicles require special consideration to determine proper geometrical design; highways through larger cities and towns are usually paved for the full width of the roadway with curb and gutter sections.

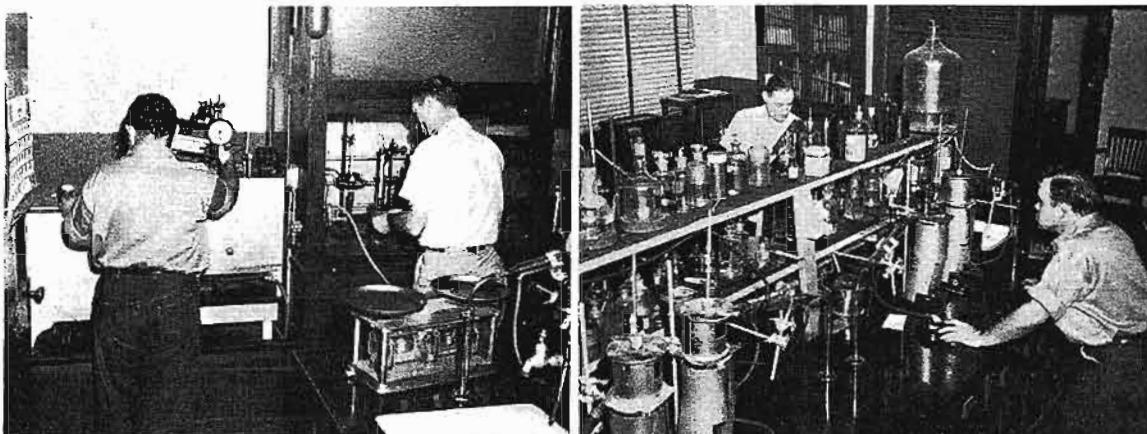

Arkansas State Highway Commission

Design Policies for Two-Lane Rural Highways

Traffic Classification	Class B-1	Class B-2	Class C	Class D	Class E
<b>Traffic:</b>					
Average per day (24) hour-----	1500-4000	750-1500	300-750	100-300	Under 100
Maximum per hour-----	150- 400	75- 150	30- 75	10- 30	Under 10
<b>Design Speed: Miles per Hour</b>					
Level -----	70	70	60	50	40
Hilly -----	60	60	50	40	30
Mountain -----	50	50	40	30	30
<b>Surface:</b>	Pavement	Pavement or Intermediate Type	Inter- mediate or Low Type	Dustless or All Weather	
<b>Type</b>					
<b>Width of Surface in feet:</b> -----	24	22	22	20	18
<b>Shoulders:</b>					
Note: Minimum Width in feet (Net)---	10	8	5 to 8	4	3'
<b>Type</b>		(Sod or Stabilized)		(Earth or Gravel)	
<b>Crown:</b>					
Note: Minimum Width in feet (Net)---	44	38	32 to 38	28	24
<b>Right-of-way:</b>					
Minimum Width in feet—Primary---	120	120	120		
Secondary---			80	80	60
<b>Bridge Widths:</b>					
Over 20 feet to 50 feet in Length-----	44	38	38	28	18
Over 50 feet to 1000 feet in Length---	28	26	26	24	18
Over 1000 feet in Length-----	26	24	24	22	18
<b>Bridge Loading:</b>	H-20 or H-20-S-16	H-20	H-20	H-15	H-10
	Design Speed — Miles per Hours				
	70	60	50	40	30
<b>Curvature:</b>					
Desirable -----	1°30'	2°00'	4°00'	6°00'	10°00'
Extreme Maximum -----	4°00'	5°00'	7°00'	10°00'	16°00'
<b>Grade:</b>					
Maximum for 500 feet or more-----	4%	5%	6%	7%	8%
Maximum under 500 feet Length-----	5%	6%	7%	8%	10%
Non-Passing Sight Distance—Feet -----	600	475	350	275	200
<b>Passing Sight Distance:</b>					
Usual Minimum—Feet-----	3200	2300	1600	1100	600
Absolute Minimum—Feet-----	2900	2100	1400	900	500

## MATERIALS

The Division of Materials and Tests is charged with a heavy responsibility due to the fact that specifications for materials from year to year are becoming more complex and rigid as research activities in the highway field develop. These developments have moved at a rapid rate during the past two years. This has continuously added to the work and responsibilities of the Division of Materials and Tests. This Division is responsible for the testing and inspection of all materials used in the operation of the Highway Department, and, in addition, it makes soil and material surveys to obtain information used in the design and construction of the roadways.

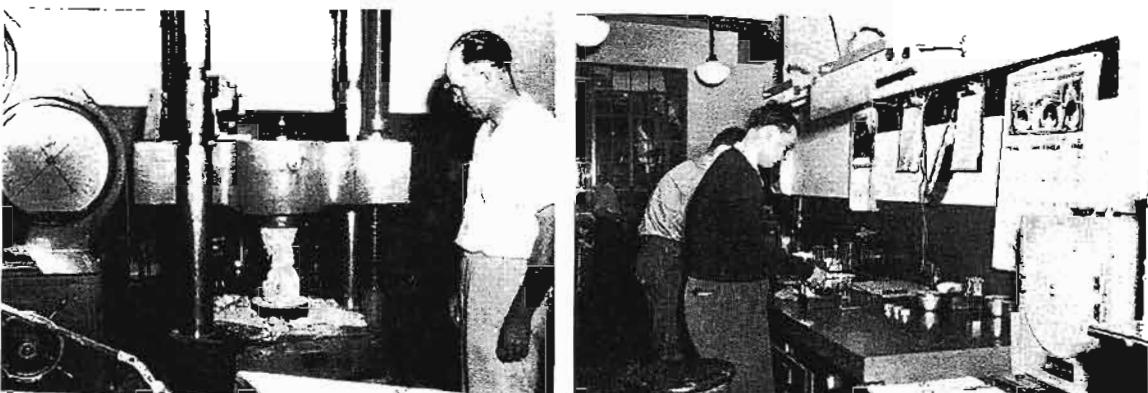

Rigid Tests Insure Compliance with Asphalt Specifications

To carry on these activities a central office and testing laboratory are maintained in Little Rock. Inspectors are stationed on construction projects throughout the State with portable laboratories, where field tests are made. Field engineers, working from the central office, make the soil surveys and material surveys.

Soil surveys are made on each proposed project before final plans are prepared. Soil borings are made and samples taken along the location of the roadway. The test results of these samples, together with recommended corrective measures that should be taken to insure a stable subgrade, are submitted to the Plans Division.

In some sections of the State, where aggregates are not available locally, soil stabilized bases are being constructed by the addition of portland cement or asphalt to the natural soil. Soil surveys on such projects must be very extensive and the laboratory testing very thorough to determine whether or not the soil is suitable for stabilization and, if suitable, to determine the quantity of stabilizing agent required. During the two years soil surveys have been made on 32 projects totaling 234 miles.

Concrete Cylinder is Tested for Compressive Strength

Soil Tests Are Important in Design

When poor subgrade soils are found on a project it is necessary to locate selected material, such as sand, for use as a sub-base and suitable soils for use in the construction of embankments. Selected soil deposits are located by this Division and agreements made with the property owners for their use. Thirty-six selected material pits were located for nineteen projects with a total of 1,367,000 cubic yards and fifty-six borrow material pits were located on 29 projects with a total of 881,000 cubic yards during the biennium.

Local materials, such as rock or gravel, are always used in highway construction and maintenance when such materials are available in the proper quantity and quality. As plans are prepared for a project, the surrounding country is scouted for suitable deposits. Test holes are dug in likely locations and samples are taken for test. Agreements are made with property owners for deposits found suitable for use.

This information is given to the Plans Division for design purposes and is shown on the plans for the information of bidders. This information gives the bidder definite information as to the location of the deposits and the price he will have to pay the property owner. This practice results in lower bid prices and savings to the State. During the past two years 90 gravel pits on 38 projects containing an estimated 1,276,000 cubic yards and 28 stone quarries on 18 projects containing an estimated 357,000 cubic yards have been investigated and reported.

Materials must be tested, inspected, and approved before being used in the work. This necessitates speedy and accurate testing to prevent any delay on the job. Materials such as sand, gravel, and stone are tested in portable laboratories at the job site. Those materials which require more elaborate equipment for testing are sent to the central laboratory, where the testing is done. During the biennium the following testing operations were performed by the central laboratory:

Type of Material	Number of Tests	Type of Material	Number of Tests
Asphalt -----	2,604	Gravel -----	1,044
Asphalt Mixtures -----	415	Miscellaneous -----	67
Cement -----	676	Paint -----	130
Concrete Culvert Pipe-----	21,557 (Feet)	Sand -----	249
Concrete Cylinders -----	1,446	Soil -----	2,066
Creosote Oils -----	40	Steel -----	246
Culvert Metal -----	301	Stone -----	642
		Water -----	7

## ROADWAY CONSTRUCTION

**Road Construction:** The primary function of the Construction Division is to supervise the work on all roadway construction. This responsibility begins the date the work order is issued and extends to the completion of the job. Its duties and responsibilities

Relocation Removes Bottleneck on U. S. 64-65 Near Little Rock

PRICE TRENDS IN HIGHWAY CONSTRUCTION

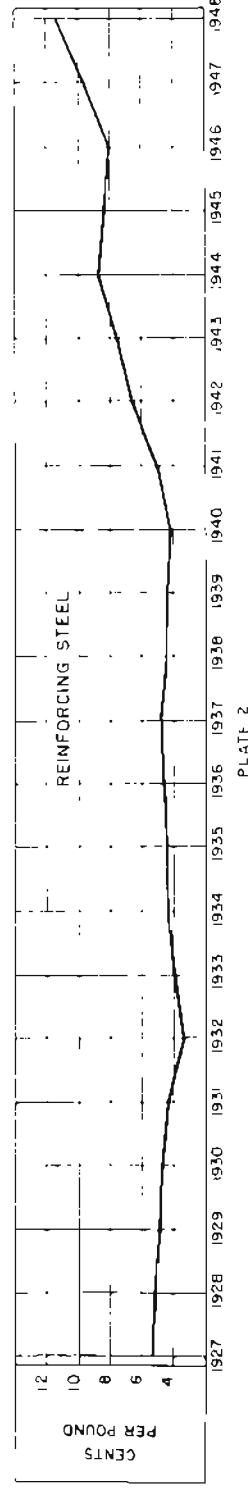

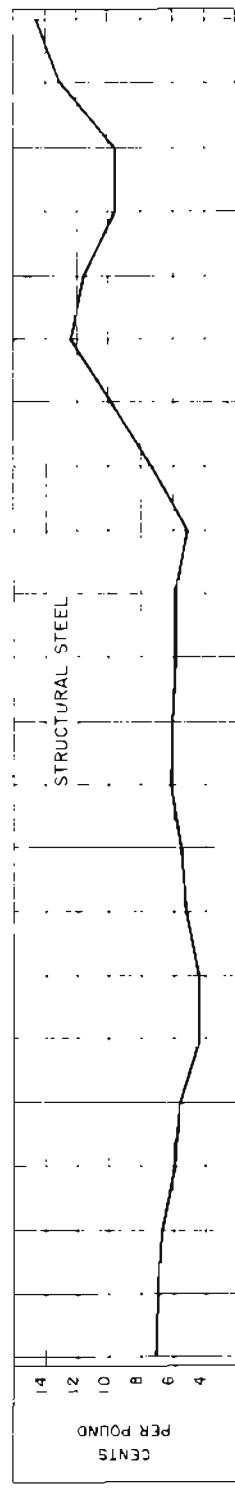

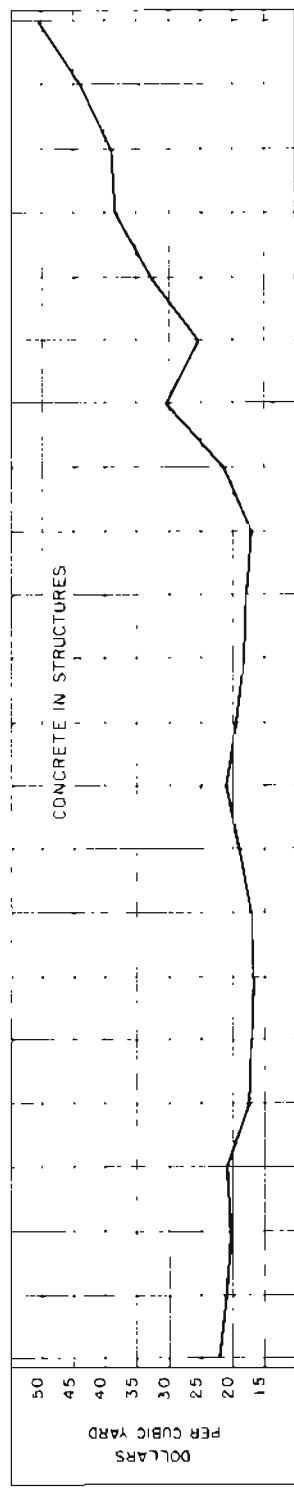

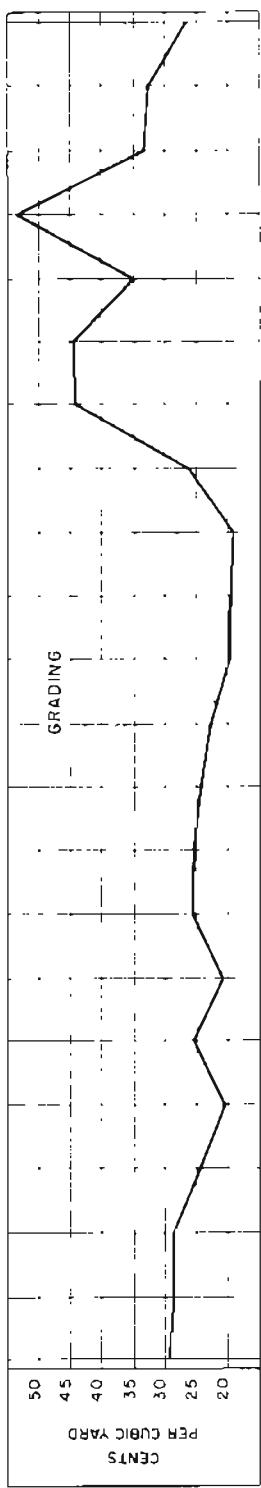

PLATE 2

three estimate checkers in the final estimate section, one secretary-stenographer, and one clerk-stenographer in the Central Office. Field forces have similarly varied according to the volume of work. The average force has consisted of twenty-nine resident engineers, twenty-three instrument men, and one hundred sub-professional employees including inspectors, field clerks, rodmen, chainmen, and checkers.

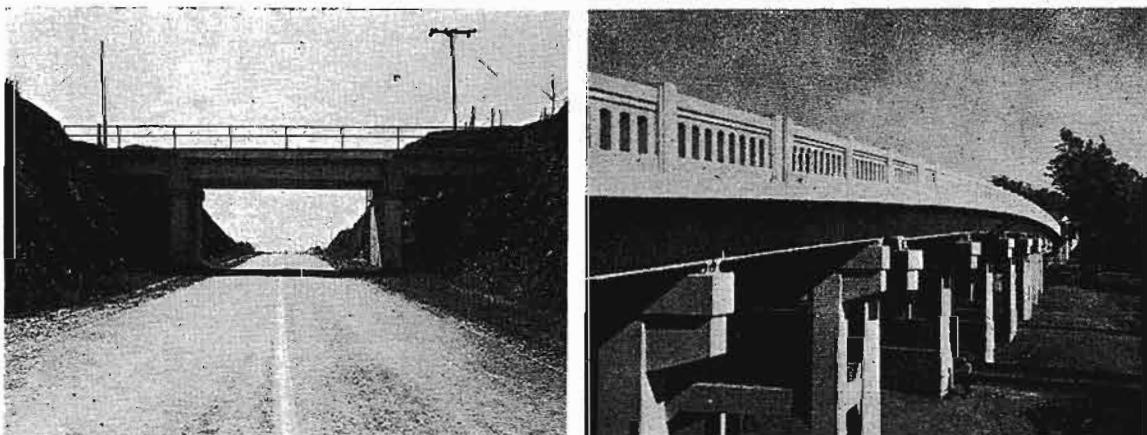

An idea of the volume of work supervised by this force is indicated in the following summary of roadway contracts which were let from July 1, 1946 to August 30, 1948:

	Number	Miles	Value
State Jobs .....	104	1,215	\$15,388,782
County Jobs .....	52	104	1,026,845
Total.....	156	1,319	\$16,415,627

A tabulation of each job awarded, its location and contract cost is shown in Table 20. The amount of Federal and State funds committed for each project is shown in Table 16.

### BRIDGES

The Bridge Department is responsible for all field surveys for bridges, the preparation of complete plans, and supervision of construction following the award of contracts. It prepares all special provisions covering unusual construction features and as a further measure of safety checks shop drawings for conformity with approved design. In addition it provides maintenance on all major bridges, or any bridge where unusual damage requires the employment of specialized knowledge and skill.

Grade Separations Save Lives

The scarcity of competent labor and the difficulty in securing construction materials have been serious handicaps in the construction of bridges during the past biennium. Both labor and materials have increased to where work at this time is costing 2.4 times as much as immediately before the war. Delays in securing materials after contracts are let have resulted in doubling the time from the awarding of contracts to completion of construction.

Due to the scarcity of labor, and restrictions during the war period, work on several projects was suspended and the contracts cancelled. New contracts on these projects have now been awarded and construction has been resumed, as follows:

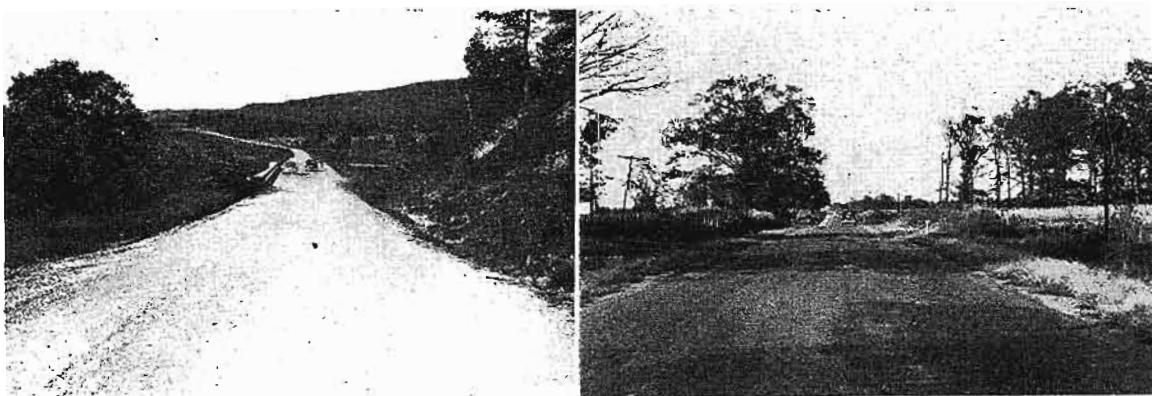

- (a) Rock Island Overpass on Roosevelt Road Extension, Little Rock ..... 618 feet
- (b) Saline River Bridge between Monticello and Warren ..... 1,715 feet
- (c) Black River Bridge at Black Rock ..... 3,092 feet

include the work of setting stakes and supplying such other information as is necessary for the guidance of contractors. It supervises the performance and rate of progress of the work to the end that all projects will be completed in compliance with the contract, plans, and specifications. It is also the responsibility of this Division to initiate and secure approval of plan changes that may be necessary to meet contingencies.

Heavy Construction on Arterial Route

The record shows that more dollars were spent on road construction from July 1, 1946 to June 30, 1948 than in any similar period since the boom days of the late twenties and early thirties. This was largely due to a carry-over from the war period when expenditures were curtailed by wartime restrictions. Unfortunately this carry-over was in dollars, and these Highway Dollars, as well as all other dollars, continued to shrink in value during this period. The record indicates that as a result of this currency debasement, construction costs in 1947 were 2.4 times the cost of similar work in 1940.

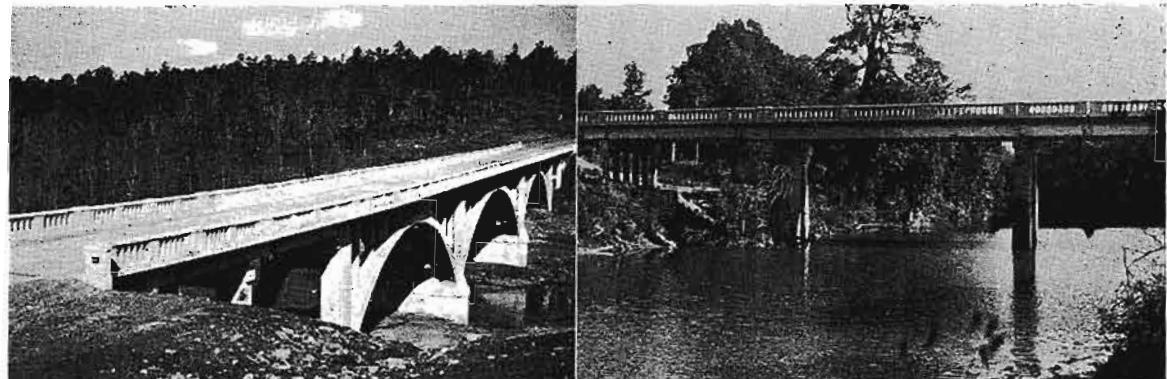

Secondary Routes Have Been Extensively Improved

The personnel required to effectively supervise the construction program has varied in number according to the volume of work under way. It has on an average consisted of a construction engineer, three assistant construction engineers, one engineering auditor,

The State Highway Commission continues to cooperate with the Tennessee Department of Highways and Public Works and the Public Roads Administration in the construction of a bridge across the Mississippi River at Memphis. The substructure contracts have been completed. Contracts for the superstructures of the main river bridge and for the Arkansas approach have been awarded and construction has begun. More than another year will be required for completion so that the project may be opened to traffic. The following summary shows the bridges which have been placed under contract from July 1, 1946 to September 30, 1948.

	Number	Length In Feet	Cost
1. Projects suspended during the war and now under contract for completion.....	3	5,421	\$1,399,347.95
2. New contracts awarded on State Highway System .....	40	15,676	4,128,459.03
3. Contracts awarded on County Highways	11	2,324	390,266.76
	<hr/> 54	<hr/> 23,421	<hr/> \$5,918,073.74

Todays Bridges are Graceful and Enduring

These 54 projects have an aggregate length of 4.436 miles and reflect an average cost of \$252.69 per lineal foot. See Table 20 for a detailed listing of all bridge jobs on which contracts have been awarded during the period covered by this report.

## COUNTY ROADS

Under the provisions of the Federal Aid Act of 1944, the State Highway Department in cooperation with the County Judges selected a system of Federal Aid Secondary County Roads. The initial request was for more than 11,000 miles; this, however, after review and approval by the Public Roads Administration was reduced to 6,451 miles. Other roads have subsequently been added to increase this system to 6,624 miles. In order that a county road may be eligible for inclusion in the Federal Aid Secondary System the following factors must be satisfied:

1. It must be desired by the County.
2. It must be of traffic interest or value.
3. It must connect with an approved Primary or Secondary route.
4. Other items of importance are whether or not the road is a mail or school bus route.

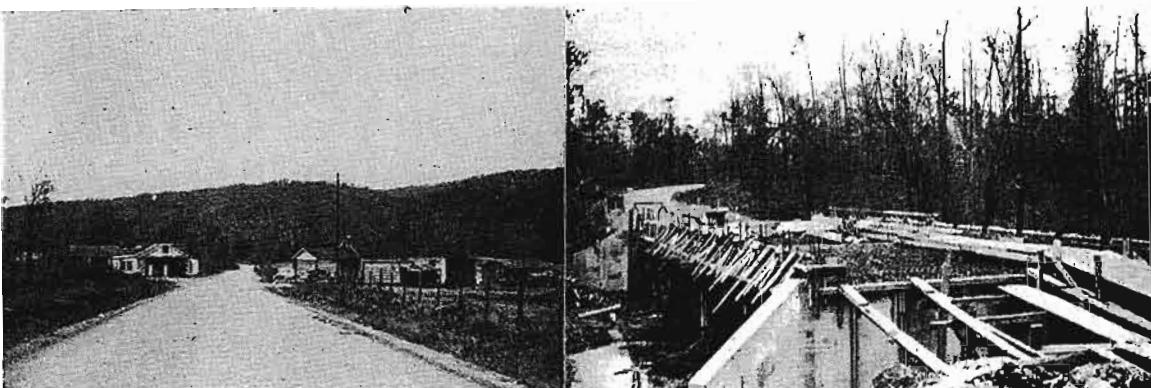

It should be noted that no county road may be added to the Federal Aid Secondary System except upon written request of the County Judge.

In 1946 the State Highway Commission in cooperation with the County Judges Association allotted one million dollars annually from the Secondary Federal Aid Apportionment for three post war years of 1946, 1947 and 1948 with the stipulation that any part not programmed within two years after each fiscal year's funds became available, would be used for State Highway Construction. This meant that the availability of each million dollar allotment would expire at the close of the fiscal year for which the allotment was made. Of the 1946 allotment \$186,331.63 only was used. The 1947 allotment was completely used, and the 1948 allotment will be programmed before the close of the fiscal year.

Experience has shown that the failure of the 1944 Federal Aid Act to provide for the apportionment of these funds by a well balanced formula has resulted in a concentration of expenditures in the more active counties. Studies are now being made to distribute future allocations by some means which will insure a wider and more representative use of the County Aid Funds.

There are two methods under which the Counties may construct projects with Federal participation. One is to advertise and award a contract to the low bidder. The other is for the County to negotiate the contract and construct the project with County forces and equipment.

If the project is let by contract it is necessary that the County place in escrow with the State Treasurer fifty percent of the total estimated construction cost. This fund plus an equal amount of Federal funds will be used to pay the contractor. When the project is completed, final quantities and costs will be computed and any funds remaining are returned to the County. If the final analysis indicates an overrun, the County will be called on to remit its prorata share of the increased cost.

Counties Build for Service

If the County wishes to construct the project with its forces and equipment, the Highway Department, after completion of surveys and plans, prepares an estimate of cost which is based on weighted averages and analyzed unit prices and which would be comparable to what the Department could expect if the project were let by contract. This estimate is forwarded to the County Judge to be used as a basis for his negotiated bid. The Judge in preparing the bid must take into consideration that the County does not furnish bond, has no overhead expense and is not entitled to make a profit.

Upon acceptance of a County's bid by both the Highway Department and the Public Roads Administration, the County will be required to place in escrow ten percent of the construction cost, including engineering and contingencies. The remaining forty percent of the County's participation will be accrued by the State retaining all estimates in full until the total of such estimates plus the escrowed amount equals fifty percent of the cost of the project. After this has been done the County will receive warrants in payment of subsequent estimates.

Regardless of the method used in constructing the project, the County must place in escrow the full estimated cost of surveys and plans. If the project is carried to completion, the County will be given credit for 50 percent of the cost of its portion of the construction cost. However, if for any reason the project is not advanced to the construction stage, the County will be required to bear the full cost of the surveys and plans. The following is a summary of improvements on this mileage:

172.77 miles are in program stage  
39.98 miles are under construction  
52.28 miles have been completed

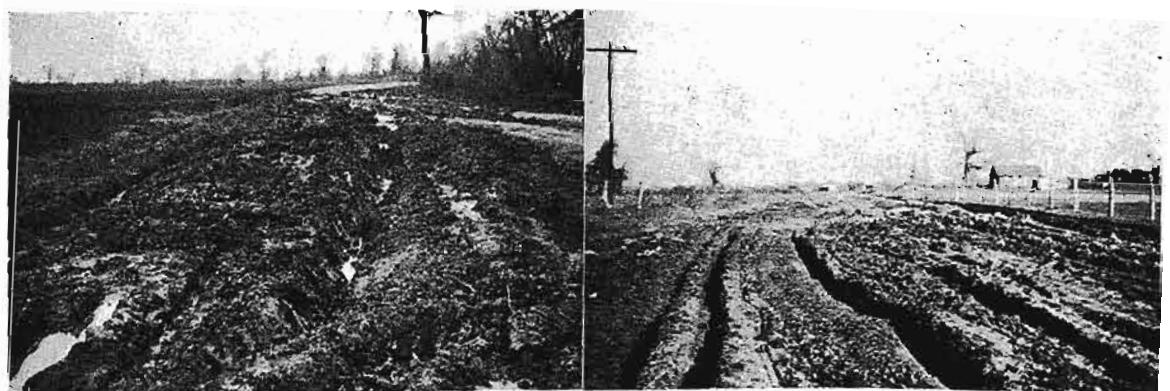

265.03 miles in current improvement program

1. 118 Projects have been programmed to date. This is fifty percent of the Counties' three year authorization.	
2. Projects under contract	17
Projects being constructed by counties	43
Projects completed or under construction	60

These are distributed in twenty-four counties and have an average length of 1.7 miles.

#### MAINTENANCE

**Operations:** A major responsibility of the State Highway Department is the maintenance of the highways in such a manner as to preserve the original investment and provide satisfactory, safe transportation facilities. To adequately meet this responsibility it is necessary that sufficient funds be available to defray the cost of essential work. This, however, has not been the case. The Refunding Law, Act 4 of 1941, provided for the appropriation of \$3,075,000 annually for road maintenance. Not only was this figure admittedly ultra-conservative at that time, but the present maintenance wage rates are  $2\frac{1}{4}$  times the average rate paid at the time of the passage of the act. Subsequently war time shortages of labor and equipment, priorities and restrictions coupled with the increased volume, speed and weight of traffic have taken heavy toll. This situation emphasizes the need for additional funds to remedy the present critical condition. A careful study on the part of the Governor's Highway Advisory Committee and experienced engineers within the Department indicates that an annual appropriation of \$7,000,000 for routine maintenance operations including materials, equipment, and labor is necessary if the highways are to be maintained in a manner to guarantee their full life expectancy. Contingencies in the way of heavy repairs on pavements, replacement of gravel or crushed stone, betterments, and replacement of bridges call for additional sums above those needed for routine operations. For example, an extensive maintenance program during the past year was disrupted by the unusually hard freeze which was recorded by the U. S. Weather Bureau as the most severe since 1905. Many miles of bituminous surfaced roads were severely damaged and in many instances heavy traveled gravel highways were turned into a sea of mud due to alternate freezing and thawing. This condition necessitated the expenditure of large sums for immediate repairs and prevented the continuation of the general betterment program as planned. This damage is graphically revealed in the accompanying photographs which were taken on March 1, 1948.

The Result of Alternate Freezing and Thawing of Gravel Roads

These conditions speak for themselves and increased funds over and above the amounts normally required for routine maintenance in order that the State may be adequately fortified against future similar contingencies.

Increased density and weight of traffic during the past several years have damaged many miles of old bituminous pavements to such an extent that they will require reconstruction within the near future if a satisfactory riding surface is to be maintained and extensive and abnormally high maintenance costs are to be avoided. During the biennium 356 miles of bituminous pavement have been resurfaced. The Department produced with its own forces 108,348 tons of asphaltic premix valued at \$541,730 for use on this work. During this period 153 miles of gravel were replaced with low cost bituminous surfacing and 903 miles of gravel were resurfaced. Of the 750,000 cubic

Municipal Routes are Maintained by The State

yards of gravel and stone required in this program 478,847 cubic yards were produced with State forces at a cost of \$359,135. Similarly 1,364 miles of concrete pavement showed extensive deterioration due to war time use and unavoidable neglect. This condition called for extensive mudjacking to level and stabilize these surfaces. Fourteen mudjacks of improved design have been in almost continuous operation in an effort to salvage these pavements. Attention is called to the fact however that intermittent mudjacking is not a "cure all" as practically all of the older pavements require routine mudjacking because of the poor sub-grade soils in this State and some sections require constant attention. This work calls for a high degree of skill and is expensive. For example, the restoration of U. S. Highway 67 between Arkadelphia and the Nevada County line has required 3,708 cubic yards of soil, 6,812 bags of cement and 102,254 gallons of asphalt. The cost of this work was \$58,670 or \$2,667 per mile.

A Corner in The Sign Shop

Highway markers and regulatory signs are erected and maintained by three crews which operate from the Central Headquarters. Much difficulty is experienced in this service due to the malicious destruction of signs. The Department estimates that these

acts of vandalism annually cost an amount that would construct an additional mile of high type pavement or two miles of farm to market roads. During the biennium this service has cost \$120,000. The painting of yellow barrier stripes to indicate "No Passing Zones" is planned for the immediate future and is estimated to require an additional \$100,000.

An unusual phase of this Division's activities is the operation of the Henderson Ferry at Norfork Lake in Baxter County. This ferry is state owned and provides free service. Two boats are engaged in these operations which begin at 6:00 A. M. and continue until 12:00 midnight with departures at 40 minute intervals. These ferries and approaches represent an investment of \$142,895. Their operating cost for the biennium was \$117,981. During this period 189,856 vehicles were ferried for an average of 261 per day at an average cost of 62 cents per vehicle.

District offices and shop buildings have been constructed for District 7 at Camden and District 8 at Russellville during the biennium. By this action all of the Maintenance Districts have been supplied with modern office and shop facilities.

The following tabulation shows the mileage of highways maintained in each of the 10 districts and the expenditures actually charged to routes and sections for each year of the biennium.

TABLE 5

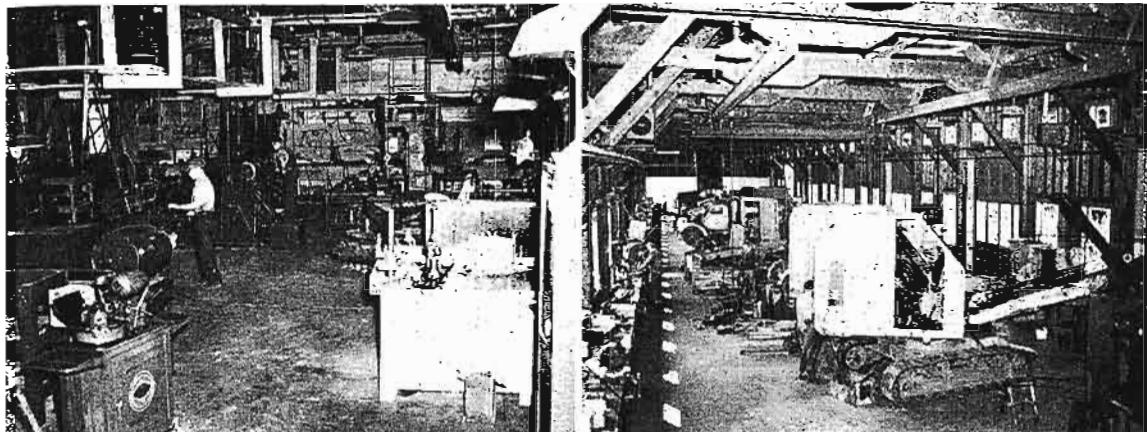

District	Mileage Highway	1946-1947	1947-1948	Total
1	869.13	\$ 391,271.69	\$ 401,139.98	\$ 792,411.67
2	994.82	311,800.08	393,941.03	705,741.11
3	830.94	322,036.38	347,657.28	669,693.66
4	759.68	321,645.66	290,401.24	612,046.90
5	1,100.61	347,883.31	382,508.53	730,891.84
6	1,046.45	395,620.82	455,192.30	850,813.12
7	945.62	358,578.75	384,356.23	742,934.98
8	889.03	269,401.08	295,363.98	564,765.06
9	1,223.82	384,649.54	414,817.71	799,467.25
10	1,094.88	458,027.64	436,471.14	894,498.78
Total	9,754.98	\$3,560,914.95	\$3,801,849.42	\$7,362,764.37

**Equipment:** The difficulty in obtaining equipment and repair parts as pointed out in the Seventeenth Biennial Report has been largely overcome due to the removal of war time controls. Prices, however, have sharply advanced. Equipment costs are now thirty-five to fifty-five percent more than during the time of price controls. Repair parts have correspondingly advanced thirty-five to forty-five percent and are difficult to obtain. These advances have greatly curtailed the Department's ability to purchase replacements for many items of equipment that have exceeded their economic life. Delays in delivery of repair parts have similarly delayed the repair of equipment that has been badly needed in maintenance operations.

Magnet Trucks Remove Loose Metal  
from Gravel Roads

254 Huge Motor Patrols of Various Makes  
Are in Use

Machine Shop

Heavy Equipment Shop

An inventory of the equipment on hand as of June 30, 1948 and its estimated value at the beginning and close of the period are shown by the following table:

TABLE 6

ITEM	On Hand July 1946	Purchased 1947-1948	Retired 1947-1948	On Hand July 1 1948	ESTIMATED VALUE	
					1946	1948
Graders — Pull Type-----	63	6	10	59	\$ 13,915	\$ 15,360
Pickup Trucks-----	84	55	0	139	29,199	77,670
Canopy Express-----	49	18	3	64	19,856	35,565

Tractors — Wheel & Front End Loaders-----	7	20	4	23	1,425	55,350
Miscellaneous Equipment----- <sup>1</sup>	599	293	42	850	360,148	976,731
	1,738	745	207	2,276	\$1,156,875	\$2,962,208

<sup>1</sup> Miscellaneous Equipment consists of Rollers, Compressors, Draglines, Shovels, Asphalt Plants, Rock Crushers etc.

During the biennium the Central Shops have been moved from their location in North Little Rock to the site of the former Arkansas Ordnance Plant at Jacksonville. This property includes two buildings each 40 feet wide by 603 feet long, which house

the heavy equipment repair shop, light equipment repair shop, stock room, paint shop, grease rack, sign shop, blacksmith shop, carpenter shop, machine shop, warehouse, and administrative offices. Eighteen acres of well drained, gravel space are now available for outside equipment and material storage.

The Central Shops at Jacksonville Are Fully Equipped for Complete Maintenance Service on the Department's Many Types of Equipment.

This property was purchased from the United States Government for \$43,500 which was approximately sixteen percent of its original construction cost.

#### TRAFFIC AND SAFETY

While the enforcement of Traffic and Safety regulations, including the compilation of data incident to highway accidents, is now a function of the State Police Department, these matters are considered of sufficient importance to the motor user to warrant the inclusion of the following table which shows the number and distribution by counties of fatal accidents which occurred during the biennium.

**TABLE 7**

1/ Includes State Highways within city limits.						

There were approximately 3,811,000,000 vehicle miles of travel on the road systems, rural and urban, of the state in 1947. Thus the traffic death rate was 9.3 per one million vehicle miles of travel. Compared to this the average for the nation during the same period was 8.6 deaths per million vehicle miles.

### FEDERAL LIAISON

The Federal Aid Division serves in a liaison capacity between the State Highway Department and the Public Roads Administration. Its primary function is to coordinate matters pertaining to Federal Aid and to translate the numerous rules and regulations which have been promulgated by the Public Roads Administration under authority of the Federal laws. It is this latter activity which has necessitated the establishment of a Federal Aid Division.

The duties of the Division are many and varied. Some of the more important functions consist in the preparation of Federal Aid Highway Programs under the direction of the Commission and Chief Engineer, the keeping of a current record which reflects the status of all Federal Aid Funds, and the making of route changes and revisions of the Federal Aid Highway Systems. In addition it transmits all plans, specifications, and estimates on proposed or active projects, including contract estimates on which the formal agreement for Federal Aid participation is based. It also prepares current and final vouchers for reimbursement to the State from Federal Funds, audits and approves engineering and contractors' payrolls, and checks and screens correspondence or other documents which have been prepared by other Divisions of the State Highway Department for submission to the Public Roads Administration.

The volume and variety of the office activities involved in the accomplishment of the foregoing during the biennium will be found in the following summary of documents which have been prepared and transmitted to the Public Roads Administration.

Form	Number
Progress and Final Vouchers .....	1,251
Form PR-4, Weekly Progress Report.....	104

### ECONOMIC AND FACTUAL STUDIES

Statistics supply the basic tools which shape modern highway planning, construction and operation. The Division of Statistics and Analyses of the Arkansas State Highway Department supplies these tools through continuing road inventories, traffic surveys, and financial studies.

**The Road Inventory Study:** This is, as the name implies, the physical inventoring of all the public roads in the State. All State and County roads are logged to show their location, length, type of improvement and various features such as bridges, railways, power lines, dwellings, commercial and industrial buildings, schools, churches, towns, and other traffic generating features. These data are invaluable in showing pictorially population trends, index of traffic generated, intersections with other highways and general

community development. As a further and highly important step from the standpoint of the highway planners, all State Highways are historically catalogued to show the date they were constructed, kind of improvements they have undergone, their cost both as regards construction and maintenance, traffic density and useful life. This information is of great value in selecting a desirable standard for future improvement and is a valuable tool in determining the amount of money that can be judiciously expended.

The information obtained from the inventory is published in tabular form and in a series of State and County maps. The remarkable value of these maps is attested by the thousands of copies that have been printed to supply the demand from governmental agencies, corporations, and individuals.

Although still handicapped by the lack of trained personnel, substantial progress has been made during the biennium in the present phase of re-inventory and of drawing new maps. The experience gained in the original survey is resulting in more complete and accurate information.

**Traffic Studies:** Traffic studies are being continually made through the operation of twenty-two permanent automatic traffic recorders at carefully selected sites. These recorders operate on the principle of the electric eye; the passage of a vehicle interrupts the beam of light and its passage is automatically recorded. A tape recording is printed which readily shows the number of vehicles passing a given point for any hour, day, month, or year. These records give a direct measure of the service a road is supplying and its value as a part of the system. In addition to the permanent stations, the Division operates portable recorders at approximately four hundred stations to determine seasonal trends in traffic due to various crop movements and industrial activities. The results of these studies give a ready estimate of the earning capacity of a given road, and in turn supply an index of the amount of money that can be economically expended either for construction or maintenance on a particular section of highway.

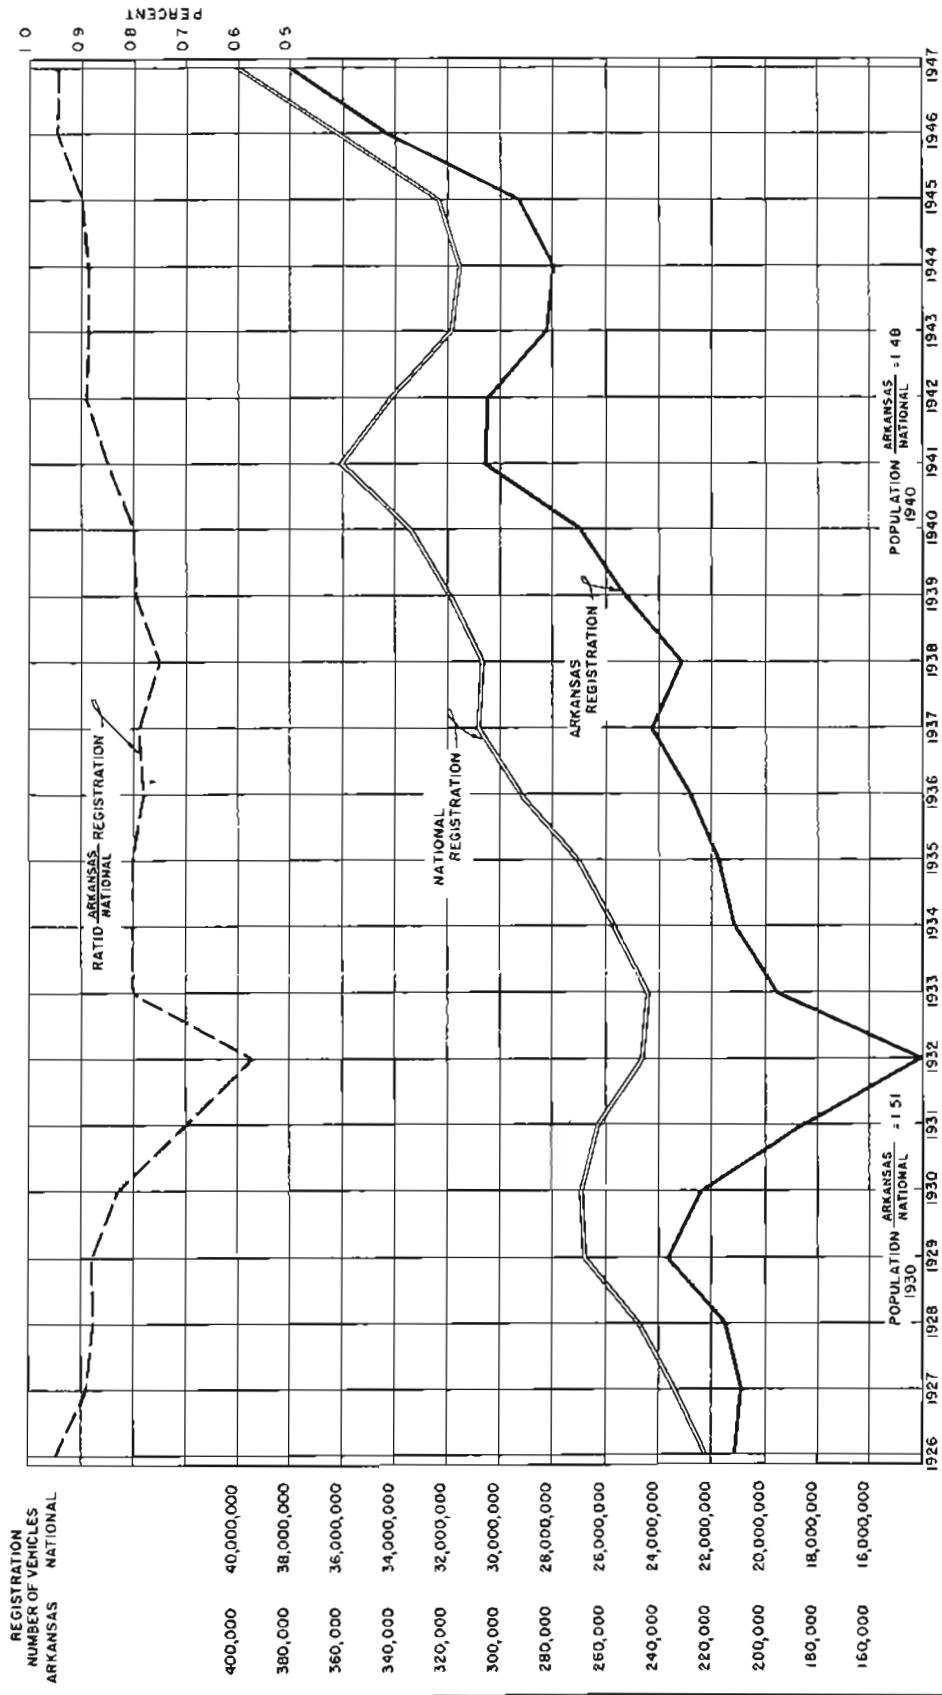

Maps and tabulations showing traffic on all sections of the State Highway System are published annually, and specific information relative to certain roads or areas is supplied in answer to hundreds of inquiries.

**Financial Studies:** A further and highly important activity is the continuous study and analysis of revenue and expense because in the final analysis all highway improvements, regardless of public demand or need, are limited to the amount of money available. Fiscal tables are so arranged as to provide in ready form a comparison of income from all sources as well as disbursements throughout the history of the Department. These studies furnish invaluable information for the preparation of appropriation requests, annual budgets, and the periodical allotment of funds to the various operating divisions. These data are attractively reflected in tabular as well as pictorial form for the information and guidance of the Highway Commission, Federal Officials, Municipal Authorities, County Judges and Civic Groups.

**Other Functions:** Secondary, but none the less highly important services are performed in the preparation and distribution of Highway Service Maps which are designed specifically for the motor user. Special maps and charts dealing with specific aspects or problems of the highway system are constantly produced to reflect in pictorial form problems under consideration.

The preparation of the Highway Department's Biennial Report and a variety of special reports is another responsibility of the Division of Statistics and Analyses, and while not usually recognized as a Public Relations Office, it nevertheless functions as such to a marked degree in answering questionnaires and in replying to a wide variety of inquiries.

### APPENDIX

In order to preserve the continuity of the text, the number of tables included in the narrative portion of the report has been held to the minimum and the majority of the statistical tabulations grouped in this section for ready reference. A summary review of highway legislation enacted by the 56th General Assembly is included at the end of this section.

#### List of Tables

TABLE 12  
STATE HIGHWAY MAINTENANCE FUND  
Summary of Expenditures for Highway Maintenance and Betterment  
July 1, 1946 Through June 30, 1948

ITEM	1946-1947	1947-1948	Biennium
Administrative (See Distribution) . . . . .	\$ 388,168.20	\$ 439,895.38	\$ 828,063.58
Maintenance			
Districts (See Recapitulation) . . . . .	3,560,914.95	3,801,849.42	7,362,764.37
State Wide Operations			
Little Rock Asphalt Plant . . . . .	4,479.76	(—)	4,479.76
Little Rock Sign Shop . . . . .	7,114.26	3,577.99 <sup>1</sup>	3,536.27
Erecting Signs . . . . .	25,860.25	84,952.16	110,802.41
Repairs to Highway Building . . . . .	3,000.00	(—)	3,000.00
Center Striping . . . . .	10,771.40	16,084.23	26,855.63
Magnet Truck . . . . .	2,317.39	(—)	2,317.39
Special Bridge Stock . . . . .	76,888.06	(—)	76,888.06
Purchase of Right of Way . . . . .	(—)	91,000.00	91,000.00
Purchase of Jacksonville Shop . . . . .	(—)	43,549.85	43,549.85
Sub Total . . . . .	130,421.12	232,008.25	362,429.37
Equipment and Upkeep			
Central Shop Equipment . . . . .	134,267.94	179,306.43	313,574.37
Repairs and Expense . . . . .	(—)	73,966.78	56,504.37
Central Stock & Tire Purchases . . . . .	17,462.41 <sup>1</sup>	1,004,946.97	1,462,016.88
Purchase of New Equipment . . . . .	457,069.91	(—)	(—)
Sub Total . . . . .	573,875.44	1,258,220.18	1,832,095.62
Total Vouchers Issued . . . . .	4,653,379.71	5,731,973.23	10,385,352.94
Claims Paid by Board of Fiscal Control . . . . .	7,199.00	68,406.49	75,605.49
Total Expenditures . . . . .	\$ 4,660,578.71	\$ 5,800,379.72	\$ 10,460,958.43

<sup>1</sup> Represents value of stock on hand purchased with funds from previous fiscal year and charged as a cash expenditure to the various districts as used.

#### DISTRIBUTION OF ADMINISTRATIVE COSTS

	1946-1947	1947-1948	Biennium
Commission Expenditures and Per Diem . . . . .	\$ 2,890.50	\$ 2,158.50	\$ 5,049.00
Salaries . . . . .	175,845.99	220,056.68	395,902.67
Travel Expense . . . . .	17,171.30	18,860.49	36,031.79
Automobile Operation and Upkeep . . . . .	54,718.97	46,173.61	100,892.58
Printing Stationery and Supplies . . . . .	47,179.86	71,489.10	118,668.96
Dues . . . . .	675.00	550.00	1,225.00
Telephone and Telegraph . . . . .	6,017.41	6,135.89	12,153.30
Utilities . . . . .	5,507.08	4,799.82	10,306.90
Postage . . . . .	4,498.77	4,623.19	9,121.96
Service on Equipment . . . . .	1,575.19	569.98	2,145.17
Surety Bond Premiums . . . . .	430.00	410.00	840.00
Liability Insurance . . . . .	40,014.51	50,581.17	90,595.68
Fire and Extended Coverage Insurance . . . . .	2,557.36	9,279.55	11,836.91
Office Equipment . . . . .	19,879.28	1,943.80	21,823.08
Legal Expense . . . . .	274.57	89.65	364.22
Service on Highway Building . . . . .	7,742.61	502.21	8,244.82
Testing General . . . . .	1,189.80	1,671.74	2,861.54
Total Administrative . . . . .	\$ 388,168.20	\$ 439,895.38	\$ 828,063.58

Note—During the Fiscal Year ended June 30, 1947, there was paid from the Highway Fund and included in this statement \$1,678,109.14.

#### RECAPITULATION BY DISTRICTS

District No.	1946-1947	1947-1948	Total
1	\$ 391,271.69	\$ 401,139.98	\$ 792,411.67
2	311,800.08	393,941.03	705,741.11
3	322,036.38	347,687.28	669,693.66
4	321,645.66	290,401.24	612,046.90

<sup>1</sup> Approved Federal Aid Routes in some instances are protested relocations which do not follow existing roads and the route mileage will not agree with existing highway mileage.

Primary Federal Aid Routes as approved December 31, 1947; Secondary Federal Aid Routes as approved December 21, 1947. Approval of other routes pending.

**A REVIEW OF HIGHWAY LEGISLATION IN ARKANSAS  
DURING THE BIENNIAL, ACTS OF 1947**  
**State Highway Commission — Highways**

Act 100. State Highway Fund: Amends Section 12 of Act 4, 1941 to provide that after the specific allocations totaling \$13,500,000 are credited, the next \$5,000,000 shall be credited to the State Highway Fund for maintenance and construction purposes, the next \$2,000,000 shall be credited to the County Aid Fund for construction and maintenance of county roads, and the balance may be used for construction and maintenance of highways or for redemption of Highway Bonds.

Act 103. Licensed Engineers: Provides that District Engineers and other responsible engineering positions must be held by licensed engineers.

Act 222. Letting of Contracts: Amends Section 21, Act 65, 1929 to provide for negotiated contracts with railway companies for installation of grade crossing protective devices.

Act 252. Transfer of Appropriations: Permits agencies of State, under certain conditions, to transfer appropriations.

Act 319. Highway Fund Balances: Provides that unincumbered balances in the Highway Fund may be transferred.

**Counties**

Act 104. School Bus Routes: Amends Section 6969 Pope's Digest to make all school bus and rural mail routes Public Highways.

Act 100. County Highway Fund: Amends Act 4, Acts of 1941, to allocate \$2,000,000 annually to County Highway fund.

**Debt Service—Bonds**

Act 24. Local Refunding Bonds: Amends Sections 3 and 4 of Act 210 of 1925 to permit any unexpended surplus, after all bonds issued under provisions of said act are redeemed, to be transferred to any other funds authorized by law.

Act 208. Provides for immediate redemption of Series B Bonds.

Act 234. Allocation of Highway Funds: Provides that allocation of motor user income under provisions of Act 4, 1941, shall be made for bond year periods.

**Improvement Districts**

Act 130. Time Extended: Street Improvement Districts, Amends Act 288 of 1943 to include streets improved and street improvement districts organized prior to January 1, 1947.

Act 160. Spring Lake District: Repeals Act 461 of 1919 which made the Little Rock and Spring Lake Improvement District a part of Highway System.

Act 23. Grants wider power to Municipal Levee and Flood Control Districts.

#### **Motor Vehicles—Motor Fuel**

Act 45. Free License: Provides for issuing plates at fee of \$1.00 for busses used to carry members to church.

Act 393. Increases driver's license fees to \$1.00

Act 416. Authorizes the transfer of For Hire Licenses.

Act 415. Motor Fuel: Amends Sub-section B of Section 4, Act 383, 1941, regarding sale of motor fuel out of state.

#### **Miscellaneous**

Act 27. Prohibits deposit of offensive matters on highways, private and public property.

Act 281. Provides for microfilming State records.

Act 345. Provides for Construction of a Toll Road in Desha and Arkansas Counties.

Act 384. Municipal Aid: Amends Section 5, Act 288, 1943, regarding distribution of municipal aid fund.
